Delayed-neutron yields in...

the number of delayed neutrons emitted, about 0.2 sec; after irradiation had ceased the sample was dipped into a neutron detector 1.5 m from the neutron source. The detector consisted of 17 boron counters of the CHM-5A (SNM-5A) type contained in a paraffin block. The end of neutron bombardment which coincided with removal of the sample was established cinematographically with an accuracy of 0.02 sec. As neutron counting started 0.2 sec after the end of bombardment, this caused a loss in neutrons with a delay of 0.16 sec. Special measurements were made to determine this error, which was not above the experimental level. The total number of delayed neutrons could thus be determined by extrapolating the neutron number - versus - time curve to the instant when bombardment ceased. The following results were found: tot. delayed-neutron yield per decay event:  $0.0130 \pm 0.0015$  for  $\text{Pu}^{239}$ , and  $0.075 \pm 0.007$  for  $\text{Th}^{232}$ . The  $\text{Pu}^{239}$  yield is twice as high as when fission is induced by thermal or fission neutrons. This result is explained by assuming that neutron emission probability increases with increasing excitation energy. There are 1 figure and 4 references: 3 Soviet and 1 non-Soviet. The two references to English-language publications read as follows: G. Keepin et al., Phys. Rev. 107, 1044 (1957); J. Nucl. Energy, 6, 1 (1957); K. Sun et al., Phys. Rev. 79, 3, 1950.

TITLE: The effect of Ni on the fatigue strength of structural steel

PERIODICAL: Referativnyy zhurnal, Metallurgiya, no. 1, 1962, 37, abstract 11250  
("Wytrzymalosc zmeoczeniowa tworzyw i elementow metalowych",  
Warszawa, 1961, 50-53, Polish summary)

TEXT: The relation between  $\delta_w$  and  $\delta_f$  for 3 grades of steel with a different Ni content (35XM, 34XH and 33XH8MA) after heat treatment was investigated. The heat treatment consisted of oil hardening at 830 - 850°C and tempering at 560 - 605°C with oil cooling. Mechanical properties ( $\delta_s$ ,  $\epsilon_t$ ,  $\delta_s/\delta_f$ ,  $\delta_{10}$ ,  $\psi$  and  $\alpha_k$ ) for all 12 investigated heats are stated. The fatigue tests were carried out by three different methods: on plane samples - tension-compression (I), on plane cantilever samples - bending with torsion (II), on cantilever samples with a notch - bending with torsion (III). It is established that after the said heat treatment ( $\delta_f = 105 - 110 \text{ kg/mm}^2$ )  $\delta_w$  of investigated steels is rather independent of the Ni content. For the method I  $\delta_w = 48 - 49 \text{ kg/mm}^2$ , for the method II  $\delta_w = 54 - 53 \text{ kg/mm}^2$  and for the method III  $\delta_w = 16 - 18 \text{ kg/mm}^2$ . For

The effect of Ni on the fatigue strength ...

all 3 steels the relation of respective  $\sigma_w$  and  $\sigma_u$  is about the same namely:  
 $\sigma_w/\sigma_u = 0.450 - 0.454$ ,  $\sigma_w^{II}/\sigma_u = 0.504 - 520$ ,  $\sigma_w^{III}/\sigma_u = 0.144 - 0.163$ . The notch sensitivity coefficient defined as the relation  $\sigma_w^{II}/\sigma_w^{III}$  is equal for all steels to 3.22 - 3.50. Consequently the addition of Ni to steel for all parts working under cyclic load conditions is not justified. The application of steels with Ni is advisable for large cross-section parts where Ni is introduced to raise the hardenability.

1480. BAK S. 2 Klin. Chir. A. M., Kraków. Epinefrektomia w zarostowych zmianach tętnic (thromboangiitis obliterans) *Epinephrectomy in thromboangiitis obliterans* Pol. Przegl. chir. 1956, 28/5 (501—506)

After a discussion of the theoretical and clinical indications for epinephrectomy in cases of thromboangiitis obliterans, the author comments on the short-term results obtained in a material of 16 patients operated on in the course of the last 2 years. Epinephrectomy was performed together with lumbar sympathectomy. Three cases are described. In one, with gangrenous changes in the limbs, the procedure had no effect on the morbid process. In the 2nd, with far-advanced changes, an immediate cure was obtained. In the 3rd, changes appeared in the second limb after a lapse of 18 months. On the whole, better results were obtained than in patients who were subjected to sympathectomy alone. The author, discussing the operative technique, recommends examination of the adrenals in every case in which sympathectomy is to be performed.

Existing views are discussed, with reference to the literature and the technique of investigations on dogs is described. An increased blood pressure in the right posterior extremity was induced by the operative method: the left iliac artery was sectioned and then terminal-lateral anastomosis with the right external iliac artery was performed. In this way the blood pressure in the right femoral artery increased by 10-30 mm. Hg, while in the left artery (ligature) it decreased by 20-30 mm. Hg and in the arteries of the forelimbs it remained unchanged. Eight dogs were fed for 3-8 months with cholesterol and methylthiouracil. Arteriosclerotic lesions were found in 5 dogs. The intensity of lesions in the right iliac artery, femoral artery and aorta was similar. The arteriosclerotic lesions and their development are described. The arteriogram and a microphotograph are included. (II, 18)

Abstract: Author discusses diseases of cattle and sheep (also horses) as a result of grazing on after-harvest stubbles, particularly of rye and wheat, when the stubbles contain considerable grain, particularly at the germinating stage. Author reports his study of incidence, reports clinical manifestations and postmortem finding, and cautions against indiscriminate feeding of cattle on this stubble. Of the 11 references, one is German, the others Polish.

BAKÁCS, E.

3343. Rapid volumetric determination of sulphate ions with barium chloride. E. Bakács *Mérn. Kém. Foly.*, 1955, 61 [2], 48-50. The determination is carried out at pH 10. Indicators are Eriochrome black T and Mg<sup>2+</sup> masked with EDTA. At the end-point, Ba<sup>2+</sup> displace Mg<sup>2+</sup> from the complex and the Mg<sup>2+</sup> change the colour of the indicator from blue to wine-red. Procedure—A soln. containing 0.005 to 0.01 g of SO<sub>4</sub><sup>2-</sup> in H<sub>2</sub>O (3 to 5 ml) is diluted with 1.5 times its vol. of ethanol. One drop of methyl red soln. is added, then dil. aq. NH<sub>3</sub> soln. until the colour is pale yellow, followed by 6 to 8 drops of buffer (NH<sub>4</sub>Cl - aq. NH<sub>3</sub> soln.) and 0.015 to 0.020 g of Eriochrome black T mixed with KCl (1:10). The colour is changed to violet-red with 1 drop of 0.05 M MgCl<sub>2</sub> soln., then to greenish blue by the dropwise addition of 0.01 M EDTA. An equal vol. of CCl<sub>4</sub> is added and, while shaking, 0.01 M BaCl<sub>2</sub> is added dropwise, at first quickly, then slowly. Near the end-point the liquid is shaken after each drop. The colour change can be seen in the ring above the settled ppt. The determination can also be carried out in the absence of CCl<sub>4</sub>. The common cations do not interfere, neither do traces of Cl<sup>-</sup> or NO<sub>3</sub><sup>-</sup>. Phosphates can be determined in the same soln.

A. G. Peru

BAKACS, E.

✓ 990. The volumetric determination of sulphate ions. L. Sickeres and K. Bakacs (Univ. Agric. Sci., Budapest, Hungary). *Magyar Kém. Foly.* 1955, 61 (10), 298-300.—When an ethanolic soln. of  $\text{SO}_4^{2-}$  containing a slight excess of  $\text{CO}_3^{2-}$  is titrated with  $\text{BaCl}_2$  soln.,  $\text{BaSO}_4$  separates out slightly faster than  $\text{BaCO}_3$ . The disappearance of  $\text{CO}_3^{2-}$  is shown by the colour change of phenolphthalein. Ether vapour excludes the air. *Procedure*.—To the alkali sulphate (containing 0.05 g of  $\text{SO}_4^{2-}$ ) in  $\text{H}_2\text{O}$  (3 to 5 ml), 0.1 N  $\text{Na}_2\text{CO}_3$  is added so that the concn. of  $\text{CO}_3^{2-}$  is equiv. to, or is in slight excess over, the concn. of  $\text{SO}_4^{2-}$ ; ethanol (98 per cent.) is then added to give a 25 to 30 per cent. soln. Phenolphthalein (2 drops) and ether (10 to 20 drops) are added and the soln. is titrated with 0.1 M  $\text{BaCl}_2$  until decolorised. The blank is determined similarly, the  $\text{SO}_4^{2-}$  being omitted. With 0.01 M  $\text{BaCl}_2$  and  $\text{Na}_2\text{CO}_3$  soln., the ethanol concn. should be 30 per cent., and 2 ml of ether should be added. A. G. Paro

BAKÁCS, E.

2709. The rapid volumetric determination of sulphate ions. E. Bakács and L. Székeres (Univ. Agric. Sci., Budapest, Magyar Kém. Polg. 1950, 62 (4), 135-139.)—The sample, containing  $\approx 0.05$  g of  $\text{SO}_4^{2-}$ , is dissolved in  $\text{H}_2\text{O}$  (3 to 5 ml).

presence of  $\text{Cd}^{2+}$  or  $\text{Mn}^{2+}$ , 0.1 N  $\text{Na}_2\text{CO}_3$  is added to ppt. the hydroxides and until the colour is permanently pink to phenolphthalein. The pptn. is carried out at room temp. if  $\text{Cd}^{2+}$  are present, and in a hot soln. in the presence of  $\text{Mn}^{2+}$ . If  $\text{Zn}^{2+}$ ,  $\text{Al}^{3+}$ ,  $\text{Bi}^{3+}$ ,  $\text{Sn}^{2+}$  or  $\text{Sb}^{3+}$  are present, 2 N  $\text{NaOH}$  soln. is added dropwise to ppt. the hydroxides and until the red colour to phenolphthalein becomes permanent. Acetic acid (0.01 N) is added to remove this colour, followed by sufficient ethanol to give a 30 per cent. soln. From a burette, 0.1 M  $\text{Na}_2\text{CO}_3$  is added, in a vol. approx. equiv. to the  $\text{SO}_4^{2-}$  content, or in excess; the soln. is then titrated with 0.1 M  $\text{BaCl}_2$  until the red colour disappears. A blank is carried out by using the same volumes of reagents as above. The accuracy depends on many factors; in the examples quoted, it was within  $\pm 2$  per cent. A. G. Pero

Orig Pub: Magyar kem. folyoirat, 1956, 62, No. 9,  
296 - 298.

Abstract: The method of determination of  $\text{AsO}_4^{3-}$  in the presence of ions-oxidizers ( $\text{BrO}_3^-$ ,  $\text{IO}_3^-$ ,  $\text{CrO}_4^{2-}$ ) was developed. The pH of the 40%ual alcohol solution to be analyzed is brought to the level of 10 (buffer solution of  $\text{NH}_4\text{Cl}$ - $\text{NH}_4\text{OH}$ ), the indicator eryochrome black T is added and the solution is titrated with  $\text{MgSO}_4$  solution until the color changes from blue to reddish-violet. The precipitate  $\text{MgNH}_4\text{AsO}_4 \cdot 6\text{H}_2\text{O}$  is forming at the titration.

solution until the disappearance of the red tint of the solution. The  $\text{HCO}_3^-$  content is calculated from the difference between the amounts of added and back-titrated NaOH. Using the determination of  $\text{HCO}_3^-$  in synthetic solutions as an example it has been shown that the proposed method is more accurate than the method of direct titration of bicarbonates with NaOH solution (Ref Zhur Kimiya, No 17, 1958, 57143). --

"Vaccination Against Influenza in Hungary, 1961-1962"

Budapest, Acta Microbiologica Academiae Scientiarum Hungaricae, Vol 9, No 4, 1962/63; pp 381-390.

Abstract [Article in English; authors' English summary]: The effectiveness of immunization with a subcutaneous influenza A-2 vaccine was estimated by the observation of 13,321 vaccinees and 24,455 control subjects. In the course of an influenza A-2 epidemic 3-4 months after the vaccinations 36.9% of the controls and 16.9% of the vaccinees contracted the disease. In the vaccinated group the average period of nursing was 40% shorter than in the control patients. Some features of the 1962 influenza epidemic which affected 23% of Hungary's population, are described. [Two Hungarian references].

"The Control of Infectious Diseases With Regard to Economically Underdeveloped Countries."

Budapest, Acta Microbiologica Academiae Scientiarum Hungaricae, Vol X, No 2, 1963, pages 189-197.

Abstract: [English article] The article is a lecture presented at the UN Conference on the Application of Science and Technology for the Benefit of the Less Developed Areas, Geneva, 13 Feb 1963. The author makes a survey on the world-wide situation in the field of infectious diseases and compares the income, mortality and quality of medical care of various countries. The methods of infectious disease control and the classification of such diseases are discussed. Conclusions are drawn and a future plan is presented for the control of infectious diseases with special emphasis on the underdeveloped countries. 3 Western references.

"Effect of Tannic Acid on Different Viruses."

Dubapest, Acta Microbiologica Academiae Scientiarum Hungaricac, Vol XIII, No 4, 1965/66, pages 327-335.

Abstract: [English article, authors' English summary modified] The effect of an aqueous solution of commercial tannic acid on different viruses has been examined. Herpesvirus hominis, Herpesvirus suis and type 3 of parainfluenza virus were found to be sensitive while poliovirus types 2 and 3, and adenovirus types 3, 4 and 6 were found to be resistant to tannic acid. Tannic acid appeared to have a virucidal action. When tannic acid was added to cells infected with Herpesvirus hominis, viral multiplication was enhanced rather than inhibited. A decreased sensitivity to herpesviruses was exhibited by cells treated with tannic acid prior to infection. The antiviral effect of tannic acid is thought to be related to the poly-anionic nature of the compound. 2 Hungarian, 28 Western references. [Manuscript received 29 Jul 65.]

"Study of the Effect of Flavonoids and Related Substances I. The Effect of Quercetin on Different Viruses."

Budapest, Acta Microbiologica Academiae Scientiarum Hungaricae, Vol XIII, No 2, 1966, pages 113-118.

Abstract: [English article, authors' English summary modified] The effect of quercetin on different viruses has been studied. Herpesvirus hominis, Herpesvirus suis, type 3 of the parainfluenza virus and the Sindbis virus were found to be sensitive to quercetin. The sensitivity of type 1 poliovirus was moderate while types 2 and 3 of the poliovirus and types 3 and 4 of the adenoviruses were completely resistant. Being active only against the extracellular virus, quercetin was considered to have a virucidal effect. The effect of morin on Herpes suis was identical with that of quercetin while rutin was almost completely ineffective. 3 Hungarian, 14 Western references.

TITLE: Application of systems with variable structure to the stabilization of a plant with changing parameters when displacement of a control element is constrained

SOURCE: Avtomatika i telemekhanika, v. 25, no. 7, 1964, 1134-1139

TOPIC TAGS: variable structure control system, plant stabilization, control system stability, second order differential equation

ABSTRACT: A study is made of the dynamics of an automatic control system with a variable structure. The system is described by a differential equation in the form

$$\ddot{\phi} - b(t)\dot{\phi} = a(t)\mu + F(t); \mu = u(\phi, \dot{\phi})K_w,$$

where  $\phi$  is the relative deviation of a controlled coordinate,  $\mu$  is the relative deviation of the controller,  $F(t)$  is a disturbing force, and  $K$  is a positive constant (gain factor) which is applicable to
