3240. CHRONIC PROGRESSIVE POLYARTHRITIS (P) AND KERATOCONJUNCTIVITIS SICCA - Polyarthritis chronica progressiva a keratoconjunctivitis sicca. (Príspěvek k řešení vzájemných vztahů) - Brémová A., Kaňková D., and Balík J. Výzkumný Úst. Chor. Revmat., Praha - ČAS.LEK.CES. 1958, 97/15-16 (474-478) Tables 8

An ophthalmologist examined 250 patients with P. The Bengal red dye test was carried out with a provocative atropine test. Keratoconjunctivitis sicca was observed in 58% of the cases, while in women a statistically significant relationship to the degree of advancement of the joint involvement, the type of functional involvement, and the duration of the disease was found. A group of patients with Marie-Strümpell disease showed about the same occurrence of keratoconjunctivitis sicca with similar relationships. The concept that only chronic progressive polyarthritis is an important aetiological factor for keratoconjunctivitis sicca was not confirmed.

TITLE: Equipment for continuously recording gamma-radiation

PERIODICAL: Referativnyy zhurnal, otdel'nyy vypusk, Izmeritel'naya
tekhnika, no.23, 1962, 65, abstract 32.23.415.
(Avtomatika, v.3, no.2, 1962, 80-82). (Slov., summary
in English).

TEXT: A device is described for the continuous recording of
 γ -radiation in a nuclear pile or "hot" laboratories. The
radiation detector is a halogen Geiger-Müller counter. At low
radiation level (0.1-100 millirads/hour), it operates as a self-
quenched counter, and with heavier radiation dosages (up to 10 rads
per hour) as an ionisation chamber. The electrical circuit uses
transistors, and a signal device operates if the dosage exceeds a
preset limit.

TITLE: In single hardness

SOURCE: Grazhdanskaya aviatsiya, no. 9, 1964, 22-23

TOPIC TAGS: transportation, aerial freight, helicopter, helicopter load suspension, lifting capacity

ABSTRACT: The paper discusses transportation of loads by helicopters when the size of the load or other circumstances, such as impossibility of landing or take-off, require external suspension of the load. It also discusses the dependence of the lifting capacity of helicopters on the temperature and humidity of the air. For heavy loads, the paper recommends the use of two helicopters and proposes a method for the external suspension of the load from the helicopters. A common carrying cable is attached to the two helicopters with the load secured to the cable by a roller, thus ensuring that the helicopters are equally loaded when their relative position changes. Suspension of a load on such a V-shaped cable increases the load stability in comparison with the external suspension in the case of single helicopter. This feature is discussed and a method of directing

Card 1/2

I 8531-65

ACCESSION NR: AP4046535

such transportation is given. The method was experimentally tested and found to be satisfactory. The suspension system is simple, not requiring any major alterations in helicopter design. It also does not require any special training of the personnel and assures the possibility of detaching the load quickly in case of emergency. By using this method, the load can be increased by 70-80% in comparison with the load which is usually transported under the same atmospheric conditions using one helicopter with external suspension. TITLE: Hydraulic amplifier built into the steering mechanism of a transport vehicle.
Class 63, No. 188851 [announced by the Automobile Plant im. I. A. Likhachev
(Avtomobil'nyy zavod)]

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 22, 1966, 156

TOPIC TAGS: vehicle component, motor vehicle, hydraulic equipment, ~~transportation equipment~~

ABSTRACT: An Author Certificate has been issued for a hydraulic amplifier built into the steering mechanism of a transport vehicle. It consists of a cylinder with a sliding piston and control-valve housing containing the hollow cylindrical slide valve of a control-piston and a female control shaft fixed by thrust washers relative to the latter in an axial direction and equipped with an annular groove for leading liquid in and out of the cylinder cavity and into the reaction-plunger cavity, which is located in the control-valve housing's orifices. The plungers are pressed by springs and liquid pressure to a fixed cover which interacts with the thrust washers when the control shaft turns. To achieve equal stress on the steering wheel when turning in either direction, the total area of the reaction plungers acting on the control shaft during the supply of liquid to the cylinder cavity (in which is located

UDC: 629.113.014.514-522.5

TITLE: Radioactive fallout on the territory of SSSR in 1963

SOURCE: Atomnaya energiya, v. 19, no. 1, 1965, 28-35

TOPIC TAGS: radioactive fallout, radio strontium, cerium, praseodymium, radioactive decay, radioactive contamination, soil behavior

ABSTRACT: The article contains summary data on the radioactive fission-product fallout and its content in the soil of SSSR during 1963. The fallout was gathered on standard gauze sheets of 0.3 m² area for 24 hours, distributed in 10--20 points in each administrative region, oblast, or republic. The ashes resulting from combustion of these sheets were analyzed radiochemically and by γ spectroscopy. The Ce¹⁴⁴, Ce¹⁴¹, and Zr⁹⁵ was determined by γ spectrometry with an NaI(Tl) crystal and a pulse-height analyzer. The Sr⁹⁰ was separated radiochemically. Tables are presented, showing the intensity of the radioactive fallout by quarters as a function of the geographic latitude, and averaged over the SSSR territory, and the density of Sr⁹⁰ fallout in SSSR soil compared with other regions of the northern

Card 1/2

L 6477-66
ACCESSION NR: AP5019805

hemisphere in 1959, 1962, and 1963. Latitude distribution of the content of various isotopes in the SSSR soil and the ratio of $\text{Ce}^{144} + \text{Pr}^{144}$ and Sr^{90} to the total content of fallout in soil are also tabulated. Plots showing the decrease in radioactivity taking place in 1962--1964 are included. The contributions of the various nuclear test explosions to the fallout are estimated. It is concluded that unless new tests are made the average Sr^{90} content in the SSSR soil will be 60--70 microcurie/km². Orig. art. has: 4 figures and 5 tables.

TITLE: Influence of naphthenes on the deparaffination process of residual raffinates

SOURCE: Ref. zh. Khimiya, Part II, Abs. 18P97

REF SOURCE: Tr. Kuybyshevsk. n.-i. in-t neft. prom-sti, vyp. 32, 1965, 86-96

TOPIC TAGS: hydrocarbon, mineral oil, deparaffination, petroleum product

ABSTRACT: The influence of naphthene hydrocarbons on the deparaffination process was studied. Residual raffinate (RA) of industrial manufacture (RA density, 0.883; viscosity, 18.69 centistoke at 100C) was used as raw material. Naphthene hydrocarbons (density, 0.8678—0.8775; viscosity, 15, 18, 17.38 centistoke at 100C; viscosity index 110—100) were separated from the RA by adsorption and then added to the initial RA in the amount of 1 to 20%. The mixtures then deparaffinized. It is shown that even an insignificant increase in the naphthene content in RA, increases filtration rate 1.5 times, while an increase to 10—20% raises the filtra-

Card 1/2

ACC NR: AR6033759

tion rate 2—2.5 times. The yield of deparaffinized oil from the potential content in RA increases by 2%. A clearly visible crystal formation of solid hydrocarbons is observed during the deparaffination process. The performance indices improve through the reduction of the concentration of solid hydrocarbons and tars. The problem of RA deparaffination with the recirculation of deparaffinized oil is then examined. After the addition of 5 and 7% of oil, the RA filtration rate during deparaffination increased by 40 and 63%, respectively. The oil yield remained unchanged. M. Rozhkov. "Sov Med" Vol XVI, No 2, pp 9-11

Of acute hepatitis cases, 90-95% are due to Botkin's disease, which spread to a considerable extent during and after World War II: 35,000 members of the US Army in North Africa had hepatitis. The epidemic nature of this type of jaundice (Botkin's disease) was established by USSR authors. Botkin's disease may assume the

TITLE: Interelectrode-gap regulator for electrospark machine

SOURCE: Elektronnaya obrabotka materialov, no. 5-6, 1965, 35-39

TOPIC TAGS: electrospark machining, metal machining, automatic regulation

ABSTRACT: Two new gap regulators developed by NIIELEKTRO are briefly described. In the first model, the regulator drive motor is connected with the electrode-feed mechanism via a differential reducer and friction clutches. The regulator is directly supplied from the power source of the electrospark machine. The friction clutches are controlled by voltage and current solenoids containing thyristors in their circuits. This regulator requires certain remodeling of the electrode-feed mechanism of standard machines. Hence, another model with thyristors and a reversible electric motor was developed. The motor positions the

Card 1/2

ACC NR: AP7001193

electrode depending on the ratio of voltage to current in the spark. This regulator can be mounted on existing machines without any remodeling. The efficiency of operation of the above regulators was tested and compared with that of an older, thyratron, type:

	Average number of work pulses per min.	% of total number of pulses
Thyratron type	4300	17.9
Solenoid type	11519	48
Reversible-motor type	12834	53

The table shows the advantages of the reversible-motor-type regulator. Orig. art. has: 3 figures and 1 table.

TITLE: On the Detection of the Radio Absorption Line of
Interstellar CH Molecules

PERIODICAL: Astronomicheskiy zhurnal, 1960, Vol 37, Nr 3,
pp 584-586 (USSR)

ABSTRACT: It is shown that it is possible to detect the absorption
of stellar radio emission by interstellar CH molecules.
The effect is most easily observed in the case of Cas-A,
Cyg-A and Tau-A sources. In order to observe the
absorption it is necessary to have an apparatus with a
fluctuation sensitivity threshold of $\Delta T_f \sim 1^\circ K$. Such
an apparatus can be produced for the 10 cm region.
Using the data obtained by Coutrez et al. in Ref 8
for the monochromatic radio emission of comets, it is
concluded that the frequency of the radio line corres-
ponding to the transition between the components of
 λ -coupling of the state $^2\text{H}_{1/2}$, $J = 1/2$ of CH molecules

Card 1/2 is $\nu = 3450$ Mc/s.
