707. THE SYNDROME OF PERIPHERAL ISCHAEMIA SECONDARY TO VARICES OF THE LOWER LIMBS - Syndrome d'ischémie périphérique secondaire aux varices des membres inférieurs - Dimitriu C.G. and Nestor R. Clin. Méd. et Balnéol., Inst. de Perfectionnement et de Spéc. Méd., Bucarest - ACTA CLIN. BELG. 1958, 13/3 (163-170) Graphs 4

Among 57 patients showing ischaemic syndrome of the leg, the trouble was due to dilated varicose veins in 7 cases. It is thought that the ischaemic disturbance is due to transient arterial spasms secondary to veno-arterial reflexes arising from varo-sensitive nervous endings in the venous wall. Such a reflex could be experimentally reproduced by venous stasis with oscillographic recording of the arterial spasms. The ischaemic syndrome of the leg can arise from dilatation of varicose veins, possibly associated with primary arterial factors.

EXCERPTA MEDICA Sec 13 Vol 13/6 Dermatology June 59

1564. ASSOCIATION OF PEYRONIE'S DISEASE WITH THE SYNDROME OF WEBER-CHRISTIAN - Association de la maladie de Peyronie avec le syndrome de Weber-Christian - Dimitriu C.G., Fingerhut B. and Dimitriu M. Chaire d'Anat. Pathol., Bucarest - ACTA UEOL. BELG. 1958, 26/2 (164-171) Illus. 4

Three patients suffering from plastic induration of the penis and showing the Weber-Christian syndrome are presented. Plastic induration of the penis appeared first and seems to be more sensitive to local treatment with cortisone in patients suffering from both diseases. The association of the 2 diseases of collagen tissues points to common pathogenic mechanisms. The Weber-Christian syndrome is more prone to recurrence than is Peyronie's disease. The only effective treatment, and even that with certain limitations, is cortisone. (IX, 13)

Title : Sulfonamidia in Domesticated Solid-Hoofed Animals.

Orig Pub : Probl. veterin., 1956, No 3, 30-36.

Abstract : Sulfathiazole (S) was introduced internally in single doses of 0.1 g./kg. to 3 horses, 3 asses and 3 mules. In horses, 2 hours after a single peroral administration of S, sulfonamidia attained 5 mg.%, and during a period of 6 hours exceeded 2 mg.%. In asses and mules, sulfonamidia was somewhat lower. In asses, a single intravenous administration of S in a dose of 0.05 g./kg. produced sulfonamidia of over 2 mg.%, lasting 8 hours. Sulfonamidia induced by administering S per os 4 times daily, for 4 days in single doses of 0.05 g./kg., was studied in 3 horses. A cumulation of the preparation was observed, and its

Card 1/2

Abs Jour : Ref Zhur - Biol., No 4, 1958, 16903

concentration in the blood attained 4.8-6 mg.%. The doses employed by the authors ensured levels of sulfonamidenia sufficient for the treatment of glanders. In a prolonged treatment, the possibility of cumulation and of toxic effect of sulfonamide should be taken into consideration. -- I.G. Shroyt.

PHYSICAL AND PROPERTIES INDEX

Practical and theoretical basis of the problem of adhesion of bituminous binders to mineral aggregates. *Mihailovic, (Nat. Ser. Radiol. Nudil (Ser. Ser. II, Dinstro) No. 25, 143 pp. (1946) (French summary). - The water resistance of pavements consisting of bituminous binders and a mineral aggregate is difficult to test because of lack of exact information concerning the adhesion of the pavements. The cohesion is defined as the resistance of the interfacial tension of water and of the binder relative to the aggregate. Neg. values indicate that water has the tendency to displace the binder, the aggregate being hydrophobic. With pos. values the aggregate is hydrophobic and the binder exerts displacement by water. Chem. interaction between the binder and the aggregate is also an important factor; the hydrophobic character (good adhesion) is enhanced by reaction between basic oxides and the acid polar units of the binder, yielding water-insol. compounds. Curvature and rapid tests are described for obtaining the necessary information to predict the behavior of a given system. Topographic and climatic conditions and the construction method used influence to some extent the properties of the paving. The aggregate must be clean and dry, the binder must be heated to a sufficient degree of fluidity. The goal of future work is the development of a binder which would possess satisfactory adhesion toward all commonly encountered mineral aggregates.*

"Epizootiologic, Clinical-Anatomic and Laboratory Studies of Chicken
Aspergillosis."

Bucharest, Revista de Zootehnie si Medicina Veterinara, Vol 13, No 4,
Apr 63; pp 88-94.

Abstract [English summary modified]: Two epizootics of *A. fumigatus*
aspergillosis in chicken flocks are described. The fungus was present
widely in litter, battery walls, eggs and embryos. Comprehensive
pathology details. Hygienic measures eliminated the infection. Two
specimen photographs; 2 photomicrographs; 5 Rumanian, 2 Western and
2 Soviet references.

Title : On the Investigation of Immunothrombopenia.

Orig Pub : Comun. Acad. RFR, 1957, 7, No 2, 285-290.

Abstract : In 4 cases out of 30, during cyrrhosis of the liver and
other illnesses, samples of thrombocytic antibodies (A)
were positive. In 2 cases of pathogenesis, A was connec-
ted with the presence of paraproteids. Seemingly, these
A, by influencing the thrombopoiesis, caused a decrease of
the quantity of thrombocytes. A correlation was not found
between the titer of A, infections of the bone marrow, and
thrombopenia. In some patients A were found blocking

Title : Investigation of Immunoleukopenias.

Orig Pub : Comun, Acad. RPR, 1957, 7, No 2, 291-296

Abstract : The content of leukocytic antibodies (A) during leukopenias of different nature was observed in 20% of cases. Pathogenesis of these A in many cases is connected with the presence of paraproteids. Seemingly, by influencing the leucopoiesis, these A cause decrease of the quantity of leukocytes. A correlation was not always found between the titer of leukocytic A and the degree of leukopenia. In a series of cases, blocked A were also found. -- L.N. Dayneko.

"Brucellosis as a Factor of Occupational Morbidity for Veterinary Surgeons and Technicians."

Bucharest, Microbiologia, Parazitologia, Epidemiologia, Vol 8, No 5, Sep-Oct 63, pp 423-431.

Abstract [Authors' English summary modified]: A professional group of 323 veterinary surgeons and technicians showed a 45.5 percent incidence of brucellosis infections during a 9-year epidemiological study. 80.3 percent of the clinical-epidemiological cases were of chronic character and 8.2 percent acute. The rate of incidence increased according to length of time in the profession: 6.1 percent after one year and 82.3 percent after 5 years in the field.

Includes 8 tables and 17 references, of which 4 English-language, 5 German, 2 Rumanian, 1 French and 5 Russian or Eastern European.

Fourteen patients were treated. The following effects were observed: The spontaneous pain completely disappeared in 3/4 of the cases, and diminished in the others. The intermittent limping index has remarkably improved. The paraesthesias disappeared in the same proportion. The skin colour became almost normal, and the cutaneous temperature also improved. The oscillogram was modified, only in patients with spasms. The patients suffering from coronary disease, with anginal pains also benefited from this treatment. No accidents were observed.
