TITLE: Problem of Quotas and Methods of
Sowing Corn with Leguminous Plants for
Green Fodder

ORIG. PUP.: Dopovidai Ukr. akad. sil'skohospod. nauk, 1958,
No. 2, 37-40
ABSTRACT: According to the findings of the Uman'skaya
Agricultural Institute, the mixed sowings
of corn with leguminous plants yield lower
crops of green mass than do the pure corn
sowings. The degree of plant suppression
depends on the mixed sowing component quotas
and the sowing dates. It is recommended that
differentiated seeding quotas and interplant-
ing of leguminous plants after corn sprouting
be employed. With interplanting the
percentage of leguminous plants (depending

Berdublikh, M. I., Churikov, A. D., Chashik, L. I.,
Kolominova, N. I., Mikhalev, G. G., LabzarevNew Control Methods at the Soviet "Krasnyy resinobitik"
(Krasnyy resinobitik Plant)

TITLE:

Periodical: Zavodskye laboratorii, 1960, Vol. 26, No. 9,

pp. 1154 - 1155

SUM: Some new control methods for technological processes and finished products of the rubber industry are described. They were elaborated at the laboratory of the Krasnyy soviet "Krasnyy resinobitik" (Krasnyy resinobitik Plant) jointly with workers of the factory. A photoelectric instrument with an OZK-10 (ZEMN-10) photocellens is used for determining the rubber-thread diameter instead of the TSP-1 (Tikhovskiy) micrometer thickness gauge used hitherto. An instrument for measuring the electrostatic charges on the surface of finished and semifinished products is designed jointly with the Institute avtomatiki Gosplan USSR (Institute of automation of the Gosplan of the USSR) under the direction

Card 1/3

of G. A. Kirzhik. The instrument consists of 3 parts, i.e., the test head, the electronic part with the potentiometer of the electrostatic field and the current source. The test head contains 2 electrode systems, one for measuring the charge and the other for measuring the dielectric strength. Measurements showed that the majority of rubber types and Januska diathermopes, resistors or potential charges were before treatment. The charge of the rubber samples measured during polarization, is preferable, insulation measuring instrument of the type M-1000-1 (M-1000-1) was designed under the direction of L. S. Shchukin, jointly with the Krasnyy Politekhnicheskiy institut (Krasnyy Politekhnicheskiy institut) for measuring the photoelectric properties of vulcanizing processes in the measuring range from 0.01 to 1000. The measuring circuit represents an unbalance d.c. bridge with a null ohmmeter as indicator. The photoelectric method is used instead of the gravimetric one for determining the concentration of rubber-chlorine and sulfuric-laser, an OZK-10 (ZEMN-10) photocellens and an OM-7 (O-1) photoelectric lamp being used. A photoelectric instrument for the luminescence analysis of rubber was designed jointly with collaborators of the kafedra eksperimental'noy fiziki Kirovskogo universiteta (Chair of Experimental Physics of Kirov University), under the direction of A. M. Lazarenko. It consists of 4 units: an Mercury lamp, an optical chamber, an OZK-10 (ZEMN-10) photocell, with amplifier and micrometer, as well as the current source of the photomultiplier.

Oxalate Ions by an Activated Reaction.
Orig Pub : Acta chim. Acad. sci. hung., 1957, 11, No 1-2, 7-13

Abstract : Of a number of known redox reactions that are accelerated by $C_2O_4^{2-}$ ions, of greatest sensitivity, as concerns detection of $C O$ ions, is the reaction of V(5+) with aniline, which permits to detect 1 microgram/ml of $C O$ ions. The reaction is carried out in acid medium (at least 0.1 N in mineral acid) by adding in a test tube to 1 ml of the solution under study 5 drops of 1 N HCl,

3 drops of concentrated solution of C H NH .HCl in dilute HCl which has been decolorized with activated charcoal, and 3 drops of 0.1 N nitric acid solution of V(5) (a solution of V O in a solution of NaOH which is then acidified with HNO). The formation within several minutes of a greenish-blue color indicates the presence of C₂O₄²⁻ ions. 1000-fold amounts of cathions Al , Fe , Zn , Mn , Mg , Ti , MoO , Bi , UO , Th , Zr , K , Na , Li , NH , Ca , Sr and Ba , 1 mg of each of the highly colored cathions of Co , Ni , Cr and Cu , and 4000-5000 fold amounts of anions of Cl , Br , SO , NO and BO do not interfere with the reaction, although they do slow down the reaction to some extent. PO and F anions decrease the sensitivity of the reaction to 50 micrograms/ml. For quantitative microdetermination of C O ions use is made of the redox reaction

"Rheological Properties of Polymer Mixtures"

Sofia, Doklady Bolgarskoy Akademii Nauk, Vol 18, No 11, 1965, pp 1019-1022

Abstract: [English article] When mixed, polymers are known to undergo changes in their physico-mechanical properties. One may expect that their rheological properties will be altered, too, and consequently, the authors studied the rheological properties of polyethylene^b(Cetene DYNH-^a)^bmixtures with polyisobutylene (Opanol) and with natural rubber.^c An analysis of the rheological index and activation energy curves shows that the main reason for the departure from the additive viscosity law is the change of the activation energy of the viscous flow of the mixtures. Since this energy depends on the mobility of the mechanical segments within the macromolecules, it is clear that this mobility, i.e., the size of the mechanical segments of the polymers undergo changes when in the mixed state. This paper was presented by Academician D. Ivanov on 30 July 1965. Orig. art. has: 4 figures. [JPRS: 36,002]

AUTHOR: Djadkov, Sergej (Engineer, Doctor of sciences)

ORG: Institute of Radio Engineering and Electronics, CSAV, Prague (Ustav radiotechniky a elektroniky CSAV)

TITLE: Solution of oscillation circuits with a nonlinear inductance or nonlinear capacitance, by the method of resonance transformations

SOURCE: Elektrotechnicky casopis, no. 2, 1965, 73-84

TOPIC TAGS: circuit theory, electric capacitance, electric inductance

ABSTRACT: [author's English summary, modified]: It is shown that the method of resonance transformations can be extended to oscillation circuits with nonlinear $L(i)$ or $C(u_c)$, and the conditions for this extension are given. From the general conditions of the phase-resonance image for the circuit response to a step function, variable scales for current and voltage are derived at which the image is circular. This is valid for the representation of the natural oscillations of a circuit with nonlinear $L(i)$ and $C(u_c)$, and for the response to a step input of a series nonattenuated circuit with a nonlinear $L(i)$ and a constant C , and of a parallel circuit with a nonlinear $C(u_c)$ and a constant L . A formula

Card 1/2

L 4104-65

ACC NR: AP5028876

is derived for the instantaneous value of a variable angular frequency as a function of the instantaneous values of current and voltage scales. A method is given for determining the nonlinear circuit's response to an arbitrary input, and formulas are presented for resonance transformations in the case of nonlinear circuits. The work was presented by L. Gvozdjak. Orig. art. has: 8 figures, 32 formulas. [JPRS]

ORG: Institute of Radio Engineering and Electronics, CSAV, Prague (Ustav radiotechniky a elektroniky CSAV)TITLE: Tandel, a nonlinear lossy capacitorSOURCE: Sleboproudý obzor, v. 26, no. 10, 1965, 607-614TOPIC TAGS: electric capacitor, RC circuit, temperature dependence

ABSTRACT:

A method is derived for determining the RC parallel equivalent circuit of a nonlinear lossy capacitor, and relations are formulated for its quality factor and some additional basic properties, from the time response of voltage and current. The properties of a triglycine-sulphate tandel are investigated on the basis of the theory derived in this manner. The RC equivalent circuit of the tandel has a validity limited only for the time response of the voltage on the basis of which the circuit was constructed. The tandel is a markedly nonlinear element, especially at low frequencies. Its power loss is high, and its quality factor is always less than 4. The dependence of the investigated properties on the ambient temperature is considerable. Orig. art. has: 10 figures, 26 formulas, and 2 tables. [JPRS]

AUTHOR: Djadkov, Sergei (Engineer; Doctor)

ORG: Institute of Radio Engineering and Electronics, CSAV, Prague (Ustav radiotechniky a elektroniky CSAV)

TITLE: Determining the response of nonlinear oscillation circuits by the method of partial phase resonance images

SOURCE: Slaboproudny obzor, v. 26, no. 8, 1965, 453-458

TOPIC TAGS: electronic circuit, electric inductance, electric capacitance

ABSTRACT: The article describes the method of partial phase resonance images for determining the waveform of natural oscillations and the response of series oscillation circuits to random input voltages as well as the response of parallel oscillation circuits to input current. The method is suitable for series circuits with a nonlinear inductance and a constant capacitance as well as for parallel circuits with a nonlinear capacitance and a constant inductance. When this method is used, the ϕ (i) and q (uc) responses are approximated by using responses with rectilinear sections and the entire complex phase plane is divided into regions with constant inductance and capacitance according to those responses. The respective section of phase resonance image in the pertinent current and voltage scales can be determined for every image. The solution of this problem with equipment for drawing resonance images is described. Orig. art. has: 10 figures and 4 formulas. [Based on author's Eng. abstr.] [JPRS]

"Ileus of Diverticular Origin"

Belgrade, Srpski arhiv za celokupno lekarstvo, Vol 93, No 9
Sep 65, pp 839-842.

Abstract: Treatment of ileus of diverticular origin was successful due to modern anaesthesiology. A preoperative diagnosis of ileus of diverticular origin is difficult and is established only with operation. The authors applied various operative methods, depending on the type of ileus and the general condition of the patient. The delicacy of ileus diagnosis, especially of this type, requires the close cooperation of pediatricians and the pediatric surgeons. 9 Yugoslav, 6 Western references.

"Inducing Dominant Mutations of Type Compactum and Spelta in Triticum
Aestivum L. Emend Thell. Ssp. Vulgare With EMS"

Sofia, Doklady Bolgarskoy Akademii Nauk, Vol 20, No 1, 1967, pp 57-60

Abstract: (English article) It is known that the species of the hexaploid group of wheat are of mutational origin. During the winter of 1965 the authors subjected seeds of *Triticum aestivum* ssp. *vulgare* var. *lutescens* of the Bezostaya 1 variety to ethylmethanesulphonate in concentrations of 0.1, 0.2, 0.4, and 0.6%. Ten ml of solution was provided per 100 seeds. After wetting with the solution, they were held in a thermostat at 25 °C for 24 hours and were stirred every 2 or 3 hours. The seeds were then rinsed with running water for 10 to 15 minutes and were sown immediately. The paper describes the new dominant mutations of compactum and spelta types obtained and gives their morphological characteristics. References: 1 Soviet and 10 Western. YUG/1-59-1-59/67

AUTHOR: Djenadić, Milan, Analyst for Quotas and Production Studies (Kranj)

TITLE: Technique of Time Recording - Determining Working Quotas - Practical Work of the Quota Controller in a Plant

PERIODICAL: Tehnika, 1959, Nr 1, pp 167-172 (YUG)

ABSTRACT: Since many Yugoslav plants have not yet introduced a realistic method for setting up quotas, the author describes in detail the theory of quota determination, based on time study, and the work and duties of a quota controller in a plant. The work of the quota controller is closely connected with that of workers, planners and other personnel employed in production. The quota controller will be called upon on various occasions, such as the production of a new article, introduction of a supplementary

Card 1/3

YUG/1-59-1-59/67

Technique of Time Recording - Determining Working Quotas -
Practical Work of the Quota Controller in a Plant

process into the standard process of an article, objections of the plant management to the existing quotas, purchase of new equipment, change of tools, change of working conditions, change of technological process, setting up of standard quotas, collecting data on the efficiency of individual equipment and machinery, revision of existing quotas and calculation of work productivity. Setting up a realistic quota for a production process requires, first, a detailed discussion with the foreman who will be able to inform the controller on various pertinent details and, secondly, time recording of the work process with special attention to workers' skill, reflexes, alertness and dexterity in handling equipment. On the basis of a complex table of time data, an analytical calculation of the factors influencing

Card 2/3

YUG/1-59-1-59/67

Technique of Time Recording - Determining Working Quotas -
Practical Work of the Quota Controller in a Plant

the yield of work can be made. A practical example of a quota set for an assembly operation is described in the article. The author emphasizes that there is only one system for determining quotas, i.e. the system based on time recording and synthesis of results, and invites questions from readers who desire more details on this theory. There are 5 tables and 1 schematic diagram.

Djerasimovic, B.

Djerasimovic, B. Beitrag zur Untersuchung der Perron'schen Modulfunktion $M(\gamma)$ einer Irrationalzahl.
Bull. Soc. Math. Phys. Serbia 6 (1954), 86-92. (Serbo-Croatian. German summary)

Perron's function $M(\gamma)$ is defined as follows. Let γ be any irrational and let A_n/B_n be the n th convergent to the regular continued fraction of γ . The numbers λ_n defined by

$$\left| \gamma - \frac{A_n}{B_n} \right| = \frac{1}{\lambda_n B_n^2} \quad (n=0, 1, 2, \dots)$$

have a limit superior as $n \rightarrow \infty$, which is denoted by $M(\gamma)$. Any other irrational γ' equivalent to γ in the sense that $\gamma' = (ay+b)/(cy+d)$ ($ad-bc=1$) is such that $M(\gamma') = M(\gamma)$. The author is concerned with the limit points of $M(\gamma)$. He shows first that every integer greater than 2 is such a limit point, as are also infinitely many rational numbers. At such points ϱ the numbers γ for which $M(\gamma) = \varrho$ have the power of the continuum. The same is true of certain cases in which ϱ is a quadratic surd. Every integer greater than 3 is a limit point of such points ϱ .

Reh
Reh

Djerasimovic, Bozidar. Beitrag zur Theorie der regelmässigen Kettenbrüche. Math. Z. 42 (1935), 320-329.

The author introduces a set of symbols to express certain operations on ordered n -tuples of numbers. For example, if $A = a_1, \dots, a_n$, then $\underline{A} = a_1, \dots, a_n$; $\overline{A} = a_2, \dots, a_n$; $A' = a_1, \dots, a_{n-1}$. The purpose of this notation is to facilitate the derivation of results in the theory of regular continued fractions. New proofs for classical results as well as for some recent theorems due to Steuerwald [Math. Z. 32 (1950), 686-697; MR 12, 393] are then given using this new symbolism.

TITLE: On eigenvalues of linear systems damped proportionally

SOURCE: Proceedings of vibration problems, v. 6, no. 1, 1965, 83-89

TOPIC TAGS: differential equation, eigenvalue, damping

ABSTRACT: An undamped system has equation

$$-m \frac{\partial^2 q}{\partial t^2} - L(S, q) = 0, \quad (1)$$

where $m \frac{\partial^2 q}{\partial t^2}$ is inertial and $L(S, q)$ is the internal restoring force of the form

$$L(A_1, A_0) = \sum_{k=1}^n \left\{ \sum_c \left[\sum_i \left(C_{ik} \frac{\partial^{n-k} A_1}{\partial x^{n-k} \partial y^{k-1}, \dots, \partial x^{n-k} \partial y^{k-1}} \right) \frac{\partial^k A_0}{\partial x^k \partial y^k, \dots} \right] \right\}. \quad (2)$$

The equation of the corresponding viscously externally and internally damped system is

$$-m \frac{\partial^2 q}{\partial t^2} - L(S, q) - s \frac{\partial q}{\partial t} - L\left(u, \frac{\partial q}{\partial t}\right) = 0. \quad (3)$$

The author determines formulas for eigenvalues of system (3), from which the

TITLE: Some properties of thermistors made of three-compound oxide systems

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 6, 1965, 525-528

TOPIC TAGS: thermistor, semiconductor research, admixture, x-ray analysis

ABSTRACT: Thermistors are usually made of oxide mixtures (see, e.g., N. P. Potapov, Tr. Odessk. hidrometeorol. i-ta, 37, 1956, No. 8; M. Ya. Kushnarev, V. P. Linde, S. Z. Roginskiy, FIT, III, 1961, No. 2, 384). The present paper describes the production of three-component $MnO_2-Ni_2O_3-OO_2-O_3$ and $MnO_2-Ni_2O_3-ZnO$ systems whose properties may be altered by small admixture activation. In addition to the Volt-Ampere and temperature characteristics of the system, the authors present also comprehensive results of X-ray structural analysis of the various semiconductors produced and the distribution of metallic admixtures within the spinel structures. This paper was presented by Academician G. Nadjakov on 23 February 1965. Orig. art. has 2 figures and 2 tables. [Orig. art. in German] [JPRS]

Preparation of some imino- and cyanoimino-substituted barbiturates. D. M. Djordjević, S. M. Djokić, and P. Hammar (41) [a], Zagreb, Yugoslavia. *J. Heterocyclic Chem.*, 26, 15-20 (1989) (in English).—Condensations of substituted esters (I) of $\text{CH}_3(\text{CO}_2\text{H})$ and $\text{NCCl}(\text{NH})\text{CO}_2\text{H}$ with urea, $(\text{H}_4\text{N})_2\text{NH}\cdot\text{HNO}_2$ (II) and $\text{H}_2\text{NC}(\text{NH})\text{NHCN}$ (III) were effected by gradually adding MeONa to the reaction mixt. The resulting substituted imino and cyanoimino barbituric acids (IV) were hydrolyzed to the corresponding barbituric acids. General procedure: A soln. of MeONa (from 0.22 g.-atom Na) in 100 ml. MeOH was gradually added to a boiling suspension of 0.1 mole I and 0.15 mole urea, resp. III, during 6-8 hrs., refluxed 3 hrs., evapd. to dryness, dissolved in 150 ml. H_2O , extd. with 40 ml. Et_2O and decolorized. After acidification with 15% HCl under cooling and stirring, the ppt. was filtered off and washed with H_2O . The hydrolysis was effected by boiling 0.1 mole IV 7-18 hrs. with 13 ml. 25% H_2SO_4 . II (1.6 mole) was used per mole of I, and the MeONa soln. was prep'd. from 0.15 g.-atom Na in corresponding excess of MeOH . The following IV were prep'd. (substituents given): 5-(1-cyclohexen-1-yl)-5-methyl-4-imino, m. 247-54° (decompr.) (melting points deid. on Kofler mikro app. unless otherwise stated), 68.4% yield; 5-(1-cyclohexen-1-yl)-5-ethyl-4-imino, m. 250-63° (decompr.), 91.7% yield; 5-(1-

cyclohexen-1-yl)-5-methyl-2,4-dilimino, m. 245-53° (decompr.), 70.4% yield; 5-(1-cyclohexen-1-yl)-5-ethyl-2,4-dilimino, m. 248-53° (decompr.), 89% yield; 5-phenyl-2-limino, m. 333-0° (decompr.), 86% yield; 5-phenyl-5-methyl-2-imino, m. over 360° (decompr.) (uncorr.), 86% yield; 5-phenyl-5-ethyl-2-imino, m. 313-15° (decompr.), 93.5% yield; 5-(1-cyclohexen-1-yl)-5-methyl-1-cyano-2,4-dilimino, m. 266-72° (decompr.), 85.6% yield; 5-(1-cyclohexen-1-yl)-5-ethyl-2,4-dilimino, m. 263-6° (decompr.), 87% yield; 5-phenyl-1-cyano-2-imino, m. 280-93° (decompr. from 289°), 79.5% yield; 5-phenyl-5-methyl-1-cyano-2-imino, m. 236-41° (decompr.), 89.6% yield; 5-phenyl-5-ethyl-1-cyano-2-imino, m. 220-5° (decompr.), 88% yield. By hydrolysis, the following barbituric acids were prep'd. (yields not stated): 5-(1-cyclohexen-1-yl)-5-methyl, m. 205-10° (uncorr.); 5-(1-cyclohexen-1-yl)-5-ethyl, m. 175-8° (uncorr.); 5-phenyl, m. 250° (decompr.); 5-phenyl-5-methyl, m. 223°; 5-phenyl-5-ethyl, m. 177° (uncorr.).

simultaneously at the fractionation of V. VI is also prepared by heating V (220°, 2 hours), melting point 162 to 165° (after sublimation in vacuo). VI when heated with dilute HCl transforms into Va hydrochloride, and is reduced into 1-azabicyclo-[0,3,5]-decane under the action of LiAlH₄, melting point 211 to 213° (from benzene).

Title : Impairment of Woolen and Wool-Containing
Fabric During Finishing Processes

Date : October, 1978, 15. 10., Rem. 104., 12, No. 1,
254.

Abstract : During the washing and bleaching of woolen and
mixed fabrics the main responsible for damage, if the econ-
ometric processes are not followed, the wool fibers by
the loss of their linkages, ester linkages, and hydrogen
bonds, followed by depolymerization of peptide chains. On
also the cellulose fibers (swelling), bleaching (espe-
cially when oxidizing agents are used) can also bring about
a breakdown of the fibers. -- A. Matetskiy.

Title : Sensitivity of Different Species of Apple and Plum Trees
to Winter Frosts.

Orig Pub : Arhiv poljoprivredne nauke, 1956, 9, No 23, 49-60

Abst : In an experimental nursery of the scientific-experimental agricultural institute (Patch, Jugoslavia) during 1953-1954, which was distinguished by a severe winter (air temperatures fell to -22°), the winter resistance of 145 apple tree varieties and 51 plum tree varieties were studied. Serving as stock trees for apples were seedlings of *Malus silvestris*, and for plums-- *Prunus cerasifera*. 43 species of apples were resistant to frost, among them Antonovka, Chinese bellefleur, Chinese borsdorf, Chinese kandil, safran pepin and others. The other species of

apple trees were damaged to various degrees. Chinese safran, Bessemianka michurina and Bergamot renet are not sufficiently frost-resistant under local conditions. Of all the tested varieties of plums, only Red-wing, Convoy and Tonka were frost-resistant. All others were severely damaged.

Catalase content in lysogenic Escherichia coli. M. P. Djordjević (Inst. Nuclear Sci., Belgrade). *Bull. Inst. Nuclear Sci. "Boris Kidrič"* 6, 187-82 (1960).--Intracellular catalase was estd. colorimetrically in the lysogenic bacterium, *Escherichia coli*, strain K₁₂λ. The catalase content increased during growth of the bacteria. Its max. amt. was found during the stationary phase of growth. Differences in catalase content were observed between bacteria grown in brot and those grown in synthetic media. The most important differences were found in full-grown cultures. Even in this case, the catalase content in bacteria grown in brot was only 2.5 times higher than that in bacteria cultivated in synthetic media. Such a slight difference can hardly be interpreted as a cause for the much higher restorability of bacteria grown in synthetic media. An inhibitory action on the activity of some hypothetical toxic compd. accumulated in the medium during the bacterial growth is excluded. A depressive action of the pH of the medium on catalase activity was not found. It seems that nutrient broth is an unfavorable medium for the manifestation of catalase enzymic reaction. D. A. M.
