TITLE: Thermoelectric generator for feeding a tunnel diode

SOURCE: Sdelovaci technika, no. 10, 1964, 365-366

TOPIC TAGS: thermoelectric generator, tunnel diode

ABSTRACT: Described is the design and properties of a thermoelectric generator for feeding a tunnel diode requiring D.C. current with a low plate resistance. It is composed of two standard cooling cells, developed at the Communications Engineering Research Institute (Vyzkumny ustav sdelovaci techniky), and may be built in any laboratory from easily available parts. Lately, Czechoslovakia has developed thermoelectric materials based on tellurium, bismuth, and antimony.

Orig. art. has 5 figures, 5 formulas, 6 graphs, 1 table.

TITLE: Thermistor thermometer with a linear scale and exchangeable temperature ranges

SOURCE: Slaboproudny obzor, v. 26, no. 10, 1965, 596-600

TOPIC TAGS: thermistor, thermometer, temperature measurement, electric resistor, electronic circuit

ABSTRACT:

^{9M} Certain difficulties in using thermistors for temperature measurement, and ways of overcoming them are mentioned. The conditions are derived for current linearity in a thermistor circuit connected in series with a resistor, and also in the diagonal of an off-balance Wheatstone bridge with a thermistor in one of its arms. The relations derived in this manner are used for designing a thermometer with a linear scale. Furthermore, basic criteria are stated for the design of a thermometer with exchangeable ranges. The design of such a thermometer is presented as an example, and also the way of calibrating it, taking into consideration the optimum deviations from linearity in the entire reading range. Orig. art. has: 8 figures and 26 formulas. [JFRS]

DeChateau, L.

Full DETERMINATION OF MANGANESE IN COAL ASHES. Kessler, F.M. and DeChateau, L. (Pulva (Prague), 1955, vol. 35, 178-181; abstr. in Anal. Abstr., 1956, vol. 50, 3732). The spectrophotometric determination of manganese does not furnish satisfactory results. For this reason a polarographic method was devised which detects manganese in concentration 10^{-1} to 10^{-2} manganese oxide in alkaline medium of triethanolamine (TEA) at half-wave potential of -1.69 V. Magnesium interferes owing to changing the height of wave. (L). C.A. 2

A study of the titanium determination in coal ashes.
 Ferdinand M. Kessler and Ljuba Dočkalová. *Práce ústavu
 pro fyziku z vyššího patra*, Publ. No. 17-26, 188-213(1957).
 —Two methods were developed to det. Ti in coal ashes.
 First: the extinction of the yellow color of Ti ions with H_2O_2
 and H_2SO_4 was measured in a spectrophotometer. Second:
 Ti solns. in aq. H_2SO_4 or tartaric acid were analyzed polaro-
 graphically. Removal of Fe was necessary. The second
 method, though more difficult, is recommended for detn. of
 0.2-0.8% TiO_2 in the presence of V above 0.65%.

TITLE: Critical notes on the CO sub 2 method of determining coke reactivity [Paper presented at the 35th International Congress of the Chemical Industry held in Warsaw in September 1964]

SOURCE: Hutnicke listy, no. 11, 1965, 766-769

TOPIC TAGS: coke, carbon dioxide

ABSTRACT: The article discusses changes of the coke mass which take place during the degassing of coke up to 1000°C, as a result of which the coke reactivity determined by the CO sub 2 method is not unequivocal. A method should be used in which the composition and properties of the coke do not change before the measurements. Orig. art. has: 1 figure and 3 tables. Application of muconic acid. Jan Pospisil, Viktor Ettel, and Sylvie Dočkalová (Vysoká škola chem.-technol., Prag). ~~Chem. průmysl 8(33), 231-6(1958)~~. The isomeric muconic acids [*cis, cis* (I), m. 135-7°; *cis, trans* (II), m. 190°; *trans, trans* (III), m. 290-3°] and their di-Me esters [*cis, cis* (IV), m. 74°; *cis, trans* (V), m. 73°; *trans, trans* (VI), m. 155-6°] were refluxed for 24 hrs. with 1.5 moles maleic anhydride and 2.5 moles ethanol. No cryst. adducts were obtained. On heating the dienes with maleic anhydride and benzene at 150-250° for 5 hrs., a cryst. adduct was obtained only from VI, while I, II, and III polymerized. The muconic acids and their esters polymerized on heating for 4-5 hrs. at 100-150°, and the reaction was catalyzed by benzoyl peroxide. The acid polymers are liquid; the polymeric esters are resins suitable as glass-to-glass and metal-to-glass adhesives. Thermal decomposition of the polymers of IV, V, and VI above 200° leads to monomeric VI. The muconic esters form no adduct with *p*-benzoquinone.

The influence of some additions on the speed of carburization of steels by charcoal. J. Dockat, *Metallurgy* 4, 345-51, 350-61 (1949). -- A series of tests was carried out with various carburization mixes, to find a mix. which does not contain BaCO_3 and is suitable for carburization in current production. Na_2CO_3 was dissolved in distil. water, the soln. was absorbed by the charcoal which was then dried. It was found by means of preliminary tests that mixes contg. 10, 8.5, and 0% Na_2CO_3 have a corrosive effect on the steel surfaces and that there is practically no difference in the so-obtained speed of carburization. A 3% Na_2CO_3 mixt. gives uniform carburization without loss in intensity and has no corrosive effect on the parts to be carburized during the process. The specimens were all from the same melt for each type of steel; the charcoal was taken from the same sack (the whole contents of which was broken up into pieces of about $30 \times 15 \times 8$ mm. and thoroughly intermixed. This was done to obtain comparable results. The carburization tests were carried out in an elec. furnace with automatic temp. regulation at a temp. of 880° . Layers of 0.1 mm. each were machined off the specimens and were used for detn. of the C contents at various depths of the carburized specimens. Results obtained for two types of steel with 9 various mixtures, e.g. Na, K, and Li carbonates are given in 9 tables and 9 diagrams. The dry weight of the alkali in which the charcoal was soaked was always 3% of the charcoal weight. Carburization speeds were also detd. for 11 different combined "stabilizers." The test results show that charcoals impregnated with "stabilizers" combined with Ba compds. form high grade carburization mixes., and also that it is sufficient to use a mixture contg. 5% of Ba compds. combined with Na salts. A mixt. of Be and Na compds. is very effective, and for short carburization times a mixture of Co and Na salts proved suitable.

"Sideroachrestic Anemia with Megaloblastic Blood Formation."

Budapest, Orvosi Hetilap, Vol 107, No 40, 2 Oct 66, pages 1895-1897.

Abstract: [Authors' Hungarian summary] The group of sideroachrestic anemias which is discussed is combined with megaloblastic blood formation and, for that reason, may present problems of differentiation from pernicious anemia. Two cases are described in detail which are classified in this group. The symptomatology and therapy of the disease are described. The role of enzyme defects in heme synthesis and the importance of damages caused by drugs are pointed out. 5 Hungarian, 14 Western references.

Lengthening the service life of glass-melting furnaces.
V. Docuzian, *Ind. uscard* (Bucharest) 5, 425-9 (1955).
The following factors contribute to the increase of the operating time of glass-melting furnaces: (a) maintenance of a slight overpressure inside the furnace and avoidance of pressure variations which would cause excessive heat losses; (b) keeping the molten glass at a const. level by repeated small addns. of the raw materials instead of cooling the furnace by adding large batches less frequently; (c) preheating the air; (d) use of super-refractories for the crown of the furnace. Silica bricks are satisfactory for this purpose, but the recently introduced mullite bricks contg. ZrO₂ or TiO₂ or the silica bricks impregnated with V compds. gave also excellent results. Special attention must be given to uniform cooling during the shutdown operation. P.K.

"New Liver Resection Technique."

Budapest, Orvosi Hetilap, Vol 104, No 13, 31 Mar 63, pages 606-607.

Abstract: [Authors' Hungarian summary] The authors report a new technique for liver resection. The liver tissue is cut by plexi-knives. The form of the knives corresponds to that of the resection surface which is covered by it and bleeding is controlled by pressing the tissue against the knife. While the knife is gradually retracted, the bleeding is stopped by tying off the vessels and suturing the liver tissue between bioplast buttons. Two left sided hepatectomies were done by the new technique, the patients are well, the operation was significantly shortened and the danger of hemorrhage decreased to a minimum. The method is recommended for hepatectomies and resections due to tumors and injuries. 14 Western, 11 Eastern European references.

Title : Daily Changes in Blood Iron Content.

Orig Pub : Comun. Acad. RFR, 1957, 7, No 2, 267-271

Abstract : Eleven human subjects went without food during the day and took their meals at night with the ordinary intervals between them, during which they slept. It was found that the iron content of the blood decreased gradually and reached its lowest value at about noon of the following day, just as among persons eating at normal hours the maximal reduction in blood iron content occurred toward midnight. Among the individuals who received no food during the day, the iron content of the blood increased toward evening. The daily changes in blood iron content, as the authors note, are associated with food intake.

TITLE: Mode of action of alpha-methyl-M-tyramine (alpha-MMTyr) and metaraminol

SOURCE: Academiae scientiarum hungaricae. Acta physiologica, v. 28, no. 2, 1965, 185-193

TOPIC TAGS: pharmacology, blood pressure, rabbit

ABSTRACT: Certain pharmacological effects of α -MMTyr and metaraminol, its β -OH derivative, have been studied. 1) The effect of α -MMTyr on blood pressure, nictitating membrane, isolated guinea pig auricle and isolated rabbit aortic strips is inhibited by cocaine. Denervation of the nictitating membrane has an inhibitory effect. 2) The effect of small doses of metaraminol on blood pressure is increased by cocaine and reserpine; the effect on the nictitating membrane is increased by cocaine and denervation, and the effect on isolated rabbit aorta slices, by cocaine. The positive inotropic action of metaraminol on the isolated guinea pig auricle is blocked by cocaine. 3) Both compounds antagonize tyramine. The antagonistic action of α -MMTyr is more pronounced and is, presumably, due to its cocaine-like activity. 4) α -MMTyr is a sympathomimetic amine of

indirect action. Small doses of metaraminol exert a direct effect on blood vessels and the nictitating membrane, whereas their action on the guinea pig auricle is indirect in nature. The authors thank Mr. J. van Dijk (Philips-Duphar) and Mr. P. Szentmiklos (Chinoin) for supplies of α -methyl-m-tyramine, Dr. K. C. Mezey (Merck, Sharp and Dohme) for supplies of metaraminol, and to Miss E. Seross and Miss A. Varga for valuable technical assistance. Orig. art. has: 7 figures.

TITLE: Adrenergic beta-receptors of the nictitating membrane

SOURCE: Academia scientiarum hungaricae. Acta physiologica, v. 26, no. 3, 1965, 269-276

TOPIC TAGS: cat, pharmacology, neurophysiology

ABSTRACT: In the course of study of the adrenergic beta-receptors of the nictitating membrane of cats, it was shown that l- and d,l-isoprenaline can cause a relaxation of the contraction induced by cervical sympathetic stimulation, adrenaline infusion, amphetamine, ergotamine and tolazoline. The above-mentioned effects were antagonized by dichloroisoproterenol. The authors thank Miss E. Seress and Miss A. Varga for valuable technical assistance. Orig. art. has: 6 figures. DODASHVILI, M. I.

2845. ROENTGENKYMAGRAPHIC DATA ON MYOCARDIAL CONTRACTIVITY IN ANEURYSM (Russian text) - Dodashvili M. I. and Tavonius K. E. KLIN. MED. (Mosk.) 1957, 35/3 (89-109) Graphs 90 Illus. 7

Diffuse aneurysms occur much more often than circumscribed ones. Roentgenkymography is a valuable supplementary method of diagnosis of cardiac aneurysms, especially of the diffuse variety. Roentgenkymography as an objective method of investigation of the contractile function of the heart-muscle allows the aneurysm to be more precisely localized and its extent to be determined as well as the functional capacity of the heart muscle surrounding it. Roentgenkymography of the heart can, in some instances of aneurysm, be the main diagnostic method, especially when walls of the heart are affected simultaneously, in which cases the characteristic ECG signs may be absent. In addition to the clinical and electrocardiographic data, roentgenkymography must, in patients with cardiac aneurysm, take its appropriate place, thus helping to make an earlier and more exact diagnosis.

"Cesarean Section in Cows."

Sofia, Veterinarna Sbirka, Vol 60, No 10, 1963, p. 24.

Abstract: The author states that he has performed a routine Cesarean section on several cows pregnant with multiple litters or with a narrow pelvis during a year and a half at the local cooperative farm, with complete success. Local anesthetic was used. Antibiotics were administered for five days after the operation for preventive purposes. The author expresses the opinion that the method is convenient, devoid of postoperative complications, and requires no special facilities.

AUTHOR: Dodik, S.D., Engineer

TITLE: Performance and power relationships of transistor d.c. voltage stabilizers

PERIODICAL: Priborostroyeniye, no. 10, 1961, 10 - 12

TEXT: The paper presents an analysis of d.c. voltage stabilizer utilizing transistors connected in series and in parallel with the load as shown on Fig. 1. The base and the comparison circuit currents are neglected. It follows from the principle of operation of the circuit in Fig. 1a that the minimum transistor current will occur at maximum (here optimum) load current I_1 and input voltage $U_{in,min}$. Assuming that the output voltage is constant $U_o = U_o M$; $P = U_o I_{in} M$; $\eta = I_1 / I_{in} M$; $R_b + R_i = U_o (M - 1) / I_{in}$; $I_{in} = I_1 + I_c$. Here $M = (I_c - I_{c,min}) / (I_c (1 - B) - I_1 B - I_{c,min})$ where U_{in} - nominal no-load input voltage; B - transient U_{in} drop tolerance; P - power delivered by rectifier; η - efficiency. It follows from the Card 1/5

29331

S/119/61/000/010/003/008
D209/D303

Performance and power ...

above expressions that the optimum collector current $I_{c,opt} = (I_1 \sqrt{B} + I_{c,min}) / (1 - \sqrt{B})$. The stabilizer efficiency (neglecting the losses in the rectifier) becomes $\eta'_{opt} = \eta_{opt} / (1 - IR_1 / U_o)$, $\eta_{opt} = (1 - \sqrt{B})^2 I_{in} / I$. In the case $I_{c,min} = 0$ formulae derived by Hoyle (Ref. 1: 'The Review of Scientific Instrument', v. 19, no. 4, 1948) for parallel valve stabilizers are obtained. The maximum rectifier power is $P_{max} = U_{in,opt} (1 + A') I_{in}$, where A' - slow U_{in} increase tolerance. The power dissipated by the regulating transistor is $P_c = U_o I_c$. In order to diminish the losses in the regulating transistor I_c should be made lower than $I_{c,opt}$. This results in only a slight drop of the efficiency. The efficiency can be increased and power loss reduced by reducing B . In the circuit depicted in Fig. 1b with and without the shunt (series regulation) the $U_o = I_1 R_1$ and $U_{in} = U_o F / (1 - B)$ where $F = 1 + (R_1 / R_c) + U_{c,min} / U_o$ and $U_{c,min}$ - lowest permissible collector voltage. Here, as before, B includes the ripple voltage. In this case

Card 2/5

W*

29331

S/119/61/000/010/003/008
D209/D303

Performance and power ...

the maximum rectifier power consumption is $P_{max} = U_{in,max} I_1 = I_1 U_o (1 + A')$
 $F / (1 - B)$. In the circuit without the shunt, for any load current I_c , the
maximum power dissipation in the transistor is $P_{c,max} = (U_{in} (1 + A') - U_c -$
 $- I_1 R_i) I_1$. In this circuit the maximum collector current and the maximum
rectifier current are equal to the maximum stabilizer load current I_1 . In
the circuit with the shunt the transistor power dissipation becomes $P_c =$
 $(I_1 - (U_{in} (1 + D) - U_o - I_1 R_i) / R_s) \times (U_{in} (1 + D) - U_1 - I_1 R_i)$, where $D =$
corresponding input voltage deviation from the nominal value. In the circuit
with the shunt the maximum average I_c flows when I_1 is maximum and U_{in} is
minimum, since then the shunt current drops and the transistor current incr-
eases. Hence $I_{c,max} = I_1 - (U_{in} (1 - B') - U_o) / R_s$ where B' slow U_{in} drop
tolerance. Analysis of the above-mentioned formulae show that in the para-
llel circuit the efficiency is lower than that in the series circuit; the
transistors used in the parallel circuit must be capable of withstanding
higher power dissipation than in the series regulator circuit. The advan-

Dodik, S.D.

TITLE:

The Application of Silicon Stabilizers for Producing Reference Voltages

PERIODICAL:

Izmeritel'naya tekhnika, 1959, Nr 6, pp 45-48 (USSR)

ABSTRACT:

Silicon voltage stabilizers ("Zener" diodes) are used in different automation and measuring circuits. These silicon diodes are produced by special technological methods. Fig.1 shows the volt-ampere characteristics of the voltage stabilizer D-808. The characteristics show that the voltage remains practically constant in the field of -8 volt, with changes of the current flowing thru the voltage stabilizer from 1-20 milliamperes. This section of the voltampere characteristics may be used for stabilizing voltages analogous to the gasdischarge tube. The author then lists the advantages of the silicon voltage stabilizers compared to the gasdischarge stabilizers. In this paper the author presents the investigation results of Soviet voltage stabilizers D-808 and D-813. He states that they may be used as reference voltage sources instead of the third-order conventional elements. Finally, the

FOREWORD: This collection of articles is intended for scientists and technicians working in computer-machine building and related fields.

CONTENTS: This collection of articles presents the results of investigations related to the design and development of electronic computers. It examines the realization of some general and special algorithms by means of digital selective devices, investigations errors in the realization of functional algorithms by means of digital selective devices, and various problems of computing and designing the control circuits of computers. The articles are based on various principles of operation. Methods of digital computer simulation and the realization of stabilized supply sources for digital and analog computers are examined. In general, the problems and problems related to the construction of computers are examined. The problems are related to the construction of computers.

AUTHOR: Dodik, S. D., Engineer

TITLE: A Parametric Semiconductor Voltage Stabilizer With
Increased Accuracy ²¹

PERIODICAL: Priborostroyeniye, 1960, No. 10, pp. 15 - 16

TEXT: Silicon stabilotrons (Refs. 1-5) may be used as highly stable voltage sources with the help of temperature compensation. The dependence of the dynamic resistance of stabilotrons and Ge diodes on the operating current (Fig. 1) shows the following: By sending an additional current through the temperature-compensating stabilotrons or diodes, the dynamic resistance of the temperature-compensating elements may be largely reduced without changing the operating current flowing through the main stabilotron which is connected in the opposite direction. Figs. 2 and 3 show circuit diagrams of a parametric semiconductor stabilizer with temperature compensation. The circuit diagram shown in Fig. 3 has improved input parameters and differs from that shown in Fig. 2 by an additional voltage source at the input. A comparison between the two

Card 1/3

83982

A Parametric Semiconductor Voltage Stabilizer With Increased Accuracy S/119/60/000/010/005/014
B012/B063

circuit diagrams indicates that in the latter case the input resistance is reduced to one-fifth, while the stabilization factor is somewhat improved. The circuit diagram shown in Fig. 3 makes it possible to design stabilizers whose initial output parameters are as accurate as those of standard elements of the third class. As regards the output resistance, load current, dimensions, and temperature range, they are superior to the standard elements of the third class. The circuit diagram of a two-cascade precision stabilizer is shown in Fig. 4 and briefly described. The preliminary calculation of the temperature compensation is to be carried out by the method described by the author in Ref. 5. The data of the circuit diagram of a stabilizer shown in Fig. 4 are given. It is recommended to use silicon stabilotrons for temperature compensation. The circuit diagram given here may be used for electronic potentiometers, various systems for voltage measurement with compensation, for calibration purposes, and for various automatic and measuring instruments for which a direct current with increased accuracy is required at a low amperage (1 - 2 ma). There are 4 figures and 5 references: 3 Soviet. X
