TITLE: Movement of streams of charged particles through a plasma at an arbitrary angle relative to the internal magnetic field

SOURCE: AN UkrSSR. Vzaimodeystviye puchkov zaryazhennykh chastits s plazmoy (Interaction of charged particle beams with plasma). Kiev, Naukova dumka, 1965, 131-136

TOPIC TAGS: plasma magnetic field, charged particle, electron oscillation

ABSTRACT: The excitation of high frequency electron oscillations by a relativistic beam of charged particles moving in an arbitrary direction relative to the internal magnetic field is studied. The main interaction effect is assumed to take place where the wave frequency exceeds the cyclotron frequency of the beam and the wavelength is small compared with the cyclotron radius. The analysis of the tensor giving the dielectric properties of such interacting system gives the rate of growth of ordinary and extraordinary waves. The simplifying assumption which considers only waves with phase velocity much smaller than that of light yields a simple expression for the growth coefficients. In addition, so-called "whistler waves" are considered as a special case, where it is shown that small phase velocity waves are most effectively

TITLE: Calculation of a circular plate on an elastic foundation by the finite difference method

PERIODICAL: Referativnyy zhurnal. Matematika, no. 10, 1962, 28, abstract 10V139 (Izv. vyssh. uchebn. zavedeniy. Str-vo i arkhitekt., no. 1, 1962, 7 - 13)

TEXT: The calculation of a circular thin plate on an elastic foundation subjected to the action of an axially symmetric load is given. The elastic foundation, being in accordance with P. L. Pasternak's model, functions not only by reaction but also in shear. The finite difference method is used to solve the differential equation of the deflection surface of a plate resting on an elastic foundation. Formulas are obtained which are convenient to use, and tables are compiled which considerably simplify the computation process. It is stated that when an arbitrary load is applied to the plate the solution is carried out in the same way as that set out in the article, but the formulas obtained are more complex and the

TITLE: On Summation Bases (O bazisakh summirovaniya)

PERIODICAL: Nauchnyye doklady vysshey shkoly. Fiziko-matematicheskiye nauki, 1958, Nr 2, pp 24-27 (USSR)

ABSTRACT: The author considers the properties of the summation bases in separable Banach spaces. The definition of the T-bases due to Kozlov [Ref 1] is refined by distinguishing ordinary and weak T-bases. Besides still the notion of an unconditional base is used. 14 not very profound theorems are formulated and partly proved. Most interesting is the assertion that there exist no "universal" T-methods.

TITLE: On Absolutely Summable Series in Banach Spaces

PERIODICAL: Nauchnyye doklady vysshey shkoly. Fiziko-matematicheskiye nauki,
1958, Nr 6, pp 87-95 (USSR)

ABSTRACT: The theorem proved by the author and A.M. Olevskiy in [Ref 1] (see the preceding paper of the present issue) is extended to Banach spaces. Furthermore the following question is considered : Let E be a separable Banach space. According to V.Ya. Kozlov [Ref 3] the system $\{x_k\}$, $x_k \in E$ is called T-basis in E, if to every element $x \in E$ there corresponds a unique series

$$(18) \quad \sum_{k=1}^{\infty} c_k x_k$$

which is T-summable to x with respect to the norm.

Theorem 3 : Let T be a regular summation method. Every absolute T-basis in E is simultaneously an absolute basis. X

SOV/42-13-4-5/11

TITLE: On Unconditional Bases in the Spaces L^p ($p > 1$) (O bezuslovnykh bazisakh v prostranstvakh L^p ($p > 1$))

PERIODICAL: Uspekhi matematicheskikh nauk, 1958, Vol 13, Nr 4, pp 179-184 (USSR)

ABSTRACT: A base is called unconditional if it remains a base for an arbitrary permutation of the elements.

The system $\{f_k\}$ is called closed in the L^p if the closed linear closure of the elements of $\{f_k\}$ is identical with L^p . Let $\{f_k\}$ be a closed minimal system in the $L^p[a, b]$; $\{\psi_k\}$ the conjugate system in the $L^{p'}[a, b]$, $p' = \frac{p}{p-1}$, let $\{\psi_k\}$ be closed in the $L^{p'}[a, b]$. Let to every $f \in L^p$ correspond the development

$$f \sim \sum_{k=1}^{\infty} (f, \psi_k) f_k, \text{ where } (f, \psi_k) = \int_a^b f(x) \psi_k(x) dx. \text{ Let the number}$$

sequence $\alpha = (a_1, a_2, \dots, a_n, \dots)$ belong to the space $\ell_p\{f_k\}$ if

$$\int_a^b \left[\sum_{k=1}^{\infty} a_k^2 f_k^2(x) \right]^{\frac{p}{2}} dx < \infty. \text{ Let } \|\alpha\| = \ell_p(\alpha) = \left\{ \int_a^b \left(\sum_{k=1}^{\infty} a_k^2 f_k^2(x) \right)^{\frac{p}{2}} dx \right\}^{\frac{1}{p}}.$$

Card 1/3

On Unconditional Bases in the Spaces L^p ($p > 1$)

SOV/42-13-4-5/11

Definition: Let the system $\{f_k\}$ possess the property (A) if for every $f \in L^p$ the sequence $\{(f, \psi_k)\} \equiv \alpha_p$ belongs to the space $A_p \{f_k\}$. Definition: Let $\{f_k\}$ possess the property (B) if to every sequence $\{a_k\}$ of $A_p \{f_k\}$ there exists an $f \in L^p$ such that $(f, \psi_k) = a_k$.

Theorem: Let $\{f_k\}$ be a closed minimal system in the $L^p[a, b]$, $p > 1$, and let $\{\psi_k\}$ be the conjugate system. The system is an unconditional base in the $L^p[a, b]$ then and only then if it has the properties (A) and (B). If $f \in L^p$, $f \sim \sum_{k=1}^{\infty} (f, \psi_k) f_k$, then there exist constants m and M , $0 < m \leq M < \infty$ independent of f so that

$$m \left\{ \int_a^b \left[\sum_{k=1}^{\infty} (f, \psi_k)^2 f_k^2(x) \right]^{\frac{p}{2}} dx \right\}^{\frac{1}{p}} \leq \|f\| \leq M \left\{ \int_a^b \left[\sum_{k=1}^{\infty} (f, \psi_k)^2 f_k^2(x) \right]^{\frac{p}{2}} dx \right\}^{\frac{1}{p}}.$$

Theorem: No normalized system uniformly bounded in the L^p is an

Card 2/3

AUTHOR: Gaposhkin, V.F. SOV/42-14-4-7/27

TITLE: On a Property of Unconditional Bases in the Space L^p

PERIODICAL: Uspekhi matematicheskikh nauk, 1959, Vol 14, Nr 4, pp 143-148 (USSR)

ABSTRACT: N.K.Bari [Ref 1] has shown that in the L^2 all unconditional bases are equivalent in the sense of I.M.Gel'fand. IM.Gel'fand denotes two bases to be equivalent if one base can be obtained from the other base by application of an operator A, where A and A^{-1} are continuous. The author proves:

Theorem: In every space $L^p(a,b)$, $1 < p \neq 2$, $-\infty < a < b < \infty$ there exist non-equivalent unconditional bases.

For $(a,b) = (0,1)$ the proof is given by the fact that it is proved that the system of Haar which is an unconditional base

for $p > 1$ in the $L^p(0,1)$, can be rearranged so that the rearranged system is no longer equivalent to the initial system. There are 7 references, 3 of which are Soviet, and 4 Polish.

TITLE: Law of iterated logarithm for Cesaro and Abel summation methods

SOURCE: Teoriya veroyatnostey i yeye primeneniya, v. 10, no. 3, 1965, 449-459

TOPIC TAGS: function theory, probability, iteration, asymptotic method

ABSTRACT: Let $\{r_k\}$ be a sequence of independent random quantities taking the values of +1 and -1 with equal probability. One of the basic laws describing the asymptotic behavior of the sum is the law of the iterated logarithm

$$\sum_{k=1}^n r_k$$

$$\lim_{n \rightarrow \infty} \frac{\sum_{k=1}^n r_k}{\sqrt{2n \log \log n}} = 1 \quad (1)$$

Card 1/2

L 9654-66
ACC NR: AP5028975

established by A. Khintchine (Fund. Math., 6, 1924, 9-20). Following the generalization of this law it became interesting to find those methods of summation to which the law of iterated logarithm (with an appropriate normalization) can be applied. The present author shows that the law is valid for the case of Cesaro (C, α) (for arbitrary $\alpha > 0$) and Abel summations. The proof is based on exponential estimates due to A. N. Kolmogorov and is simpler than the one given by O. Stackelberg (On the law of iterated logarithm, Proc. Kon. Ned. Akad. Wet., Ser. A, 67, 1 (1964), I, 48 - 55; II, 56 - 67.) for the ($C, 1$) case. TITLE: Weyl factors for Fourier series of characteristic functions.

SOURCE: Uspekhi matematicheskikh nauk, v. 20, no. 4, 1965, 142-147

TOPIC TAGS: Fourier series, function

ABSTRACT: Let $E \subset [0,1]$ be some measurable set and $\psi(x)$ its characteristic function. Investigations have been made of the convergence of the Fourier series of the function $\psi(x)$:

$$\psi(x) \sim \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n \cos 2\pi n x + b_n \sin 2\pi n x,$$

with this question being reduced, on the whole, to an investigation of the characteristic functions of the open sets

$G = \bigcup_{n=1}^{\infty} \delta_n$, where $\delta_n \subset (0,1)$ are non-intersecting intervals.

The author is of the opinion that for characteristic functions of open sets a close connection exists between the convergence of the

UDC: 517.5

TITLE: A spark chamber as a detector of high-energy electron and photo showers

SOURCE: Pribory i tekhnika eksperimenta, no. 5, 1966, 60-66

TOPIC TAGS: spark camera, spark chamber, electron energy, ELECTRON DETECTION

ABSTRACT: Characteristics of a multi-plate spark chamber used as a detector of γ -quanta and electron showers whose energies range between 50 and 200 Mev are studied. The total number of sparks formed in the camera while it is registering showers is proportional to the energy of primary particles; the average number of sparks is linearly related to the primary particle energy. Fluctuations in the total number of sparks varies according to Poisson's law. A formula relating the thickness of the chamber electrodes with the camera resolution is derived. Data on spark distribution along the shower axis and on the effectiveness of the camera in registering γ -quanta are given. Orig. art. has: 8 figures.

TITLE: Crystalline glass material with piezoelectric properties

SOURCE: AN GruzSSR. Soobshcheniya, v. 43, no. 1. 1966, 105-108

TOPIC TAGS: piezoelectric property, glass product, glass property

ABSTRACT: Thermal treatment of glass of the system B_2O_3 - Bi_2O_3 - TiO_2 - BaO , with subsequent polarization, results in partial crystallization which imparts piezoelectric properties to the material. Electrical properties of this product were studied. The starting material was subjected to thermal treatment of 625 and 690°C because thermographic analysis has shown formation of two distinct crystalline forms at these temperatures. The thermally treated product was polarized at room temperature in an electrical field of 15 kv/cm. The piezomodulus, measured by a static method, was found equal to $1.1 \cdot 10^{-8}$ electrostatic units. Dielectric permeability, measured at 20 to 580°C, varied from 73 to 186. It was assumed that crystals of the type $Ba_{1+n} Bi_4 Ti_{4+n} O_{12+3n}$, where $n = 1, 2, 3$, were formed during the crystallization process

TITLE: Luminescing optical fiber for CRT screens

SOURCE: AN GruzSSR. Soobshcheniya, v. 43, no. 3, 1966, 691-693

TOPIC TAGS: luminescent material, luminophor, fiber optics

ABSTRACT: The production of CRT screens from luminescent fibers, a new area in fiber optics, eliminates the process and the problem of application of the luminophor to the screen of a CRT. The authors of this article use luminescent glass in the form of silicate glass plus an activator of trivalent cerium. The cerium content varies from 0.8 to 6%. The absorption spectra of the fiber plates were measured on a spectrophotometer, using samples 0.11mm thick. These plates have absorption in the 270-340 mu band with a maximum at 313 mu. The luminescence maximum was found to be in the wave length area 420-425 mu. The illumination is blue in color. This paper was presented by corresponding member Academician AN GruzSSR N. V. Gabashvili on 14 October 1965. Orig. art. has: 1 table. [JPRS:

Describes experiments in which subtropical and citrus plants were sprayed and/or pollinated with new

compds MUIP-100 (Thiophos) and Pyrophos as a protection against harmful insects. Used in a solution of 0.5%-3% (with reference to a concentrated soln) these preparations proved far more efficient than previously used insecticides such as sodium cyanide, oil emulsions etc., causing a 100% destruction of all entomophages present in the plant. Observations showed that the lethal effect remained for 48 hours, after which it gradually decreased, for 48 hours, after which it completely eliminated. Observations also demonstrated that the spray or pollinations with the new compounds did not affect adversely the eggs of coccidia and mites, or any insect protected by concealment during the operation.

(...) fifteen to 20 days after the operation the plants became infested with insects, the entomophages. absence of their natural enemies, the biological measures. They suggest reusing a fresh supply of entomophages onto the plant after an increase of coccidia has been noted. 248r1

Title : Intraplant Insecticides and the Biological Methods of Controlling Pests.

Orig Pub : Agrobiology, 1957, No 1, 104-108

Abstract : Octamethyl, which in a 0.2-0.3% concentration led to the death of all the red citrus mites, was ineffective when used against scale insects. Octamethyl was less toxic to the silver mite than to the red mite. In the above concentration, Octamethyl did not kill the natural enemies of the scale insects: the cryptolaemus, the rodolia, the lyndorus, the khylokorus, nor the predatory mites, which destroyed the plant eating injurious mites. The entomophagi continue to eat profusely and to multiply even after treatment with this insecticide. While

Octamethyl did not kill the useful stethorus beetle (in its contact with treated plants), some of its larvae and beetles perished when they fed on poisoned mites. The use of Octamethyl in the control of citrus pests made it possible to effectively combine chemical and biological methods in the control of pests. Mercaptophos in a 0.1% concentration which was highly effective against the red and silver mites was considerably less toxic to the coccides, but caused the total destruction of all the useful entomophagi soon after spraying and when the entomophagi were added after the treatment. Because of this fact Mercaptophos cannot be recommended for the control of citrus pests. -- I.A. Rubtsov.

TITLE: A Hydrometallurgical Method for Processing of a Sulfide
Antimony-arsenic Ore Containing Noble Metals (Pererabotka
sul'fidnoy sur'myano-mysh'yakovistoy rudy, soderzhashchey
blagorodnyye metally, gidrometallurgicheskim sposobom)

PERIODICAL: Tr. in-ta metalla i gorn. dela, AN GruzSSR, 1957, Vol 8,
pp 111-116

ABSTRACT: A process was investigated whereby Sb and As are extracted
preliminarily by means of alkaline and alkaline-sulfide solu-
tions. In order to study the process, 100-g batches of ore,
crushed to a particle size of 2-3 mm, were employed in each
experiment. The temperature of the pulp was maintained at
90°C, the liquid-to-solid ratio at 4:1. The process of leaching
lasted 30 minutes. It was established that a solution of Na₂S is
the most effective solvent for sulfidic Sb and As minerals. At
an Na₂S concentration of 7-10% and under the condition de-
scribed above, the extraction of Sb and As (at a temperature of
80-90°) reaches 98-100% and 30-40%, respectively. Up to

137-58-6-11990

A Hydrometallurgical Method for Processing of a Sulfide (cont.)

90-92% of As can be obtained in the form of As_2O_3 by means of heating the tailings from one-stage leaching operations to a temperature of 500-600° for a period of 2-3 hours in presence of air. By leaching the ore twice with a solution of Na_2S and $NaOH$ up to 50-60% of As can be extracted, the extraction of Sb being equal to 100%. Tailings that do not contain any Sb may be subjected to cyanidation in order to extract the noble metals. The As content in the tailings amounts to 0.15-0.17%.

TITLE: Utilization of Alkaline-sulfide Antimony Solutions Obtained by Leaching of Antimony Ore With a Sodium Sulfide Solution
(ispol'zovaniye shchelochno-sul'fidnykh rastvorov sur'my, poluchennykh vyshchelachivaniyem sur'myanoy rudy rastvorem sernistogo ratriya)

PERIODICAL: Tr. in-ta metalla i gorn. dela, AN GruzSSR, 1957, Vol 8,
pp 117-126

ABSTRACT: Investigations were performed in order to determine how the quality of Sb and its current efficiency are affected by basic factors of electrolysis. Optimal electrolysis results were obtained under the following conditions: composition of electrolyte prior to the electrolysis (figures in parenthesis represent the composition of the electrolyte after completion of the electrolysis process): 40-30 g/l of Sb (15-10), 40-60 g/l of NaOH (15-10), 40-60 g/l of Na₂S (80-90), 30-40 g/l of Na₂S₂O₃; temperature, 25-30°C, cathode cd=150-250 a/m²; the cathode was made of stainless steel, the anode of lead.

Card 1/2

137-58-6-11993

Utilization of Alkaline-sulfide Antimony Solutions .cont..

At a cd of 150-250 a/m² the cathode becomes covered with a layer of 99% pure metallic Sb, the current efficiency being equal to 55-60%. 0.01-0.02% of As separates out at the cathode together with Sb. When ceramic baffles are employed the current efficiency of Sb is 10% greater than in electrolytic baths not so equipped.

TITLE: Regeneration and Processing of a Spent Electrolyte Obtained During the Electrolysis of Alkaline-sulfide Antimony Solutions
(Regeneratsiya i pererabotka otrabotannogo elektrolita, poluchenogo pri elektrolize shchelochno-sulfidnykh rastvorov sur'my)

PERIODICAL Tr. In-ta metalla i gorn. dela. AN GruzSSR, 1957, Vol 8,
pp 127-134

ABSTRACT Ba(OH)₂ was employed in regeneration of a spent electrolyte while natural pyrolusite and permanganate were used for its processing. In the case of Ba(OH)₂ best regeneration results (85%-90%) are achieved by means of vigorous stirring of the mixture for a period of one hour after it had been heated to a temperature of 100°C. the relation: Na₂S₂O₃ + Na₂CO₃/Ba(OH)₂ therein is equal to 4. A 100% transformation of Na₂S into NaOH and Na₂S₂O₃ is achieved by means of introducing pyrolusite (62.3% MnO₂) into the spent electrolyte in an amount equal to the ratio MnO₂/Na₂S ~ 1.5-2, as well as by vigorous stirring of the mixture over a period of 2 hours after heating it to a

temperature of 90-100°. In order to separate the Sb completely, it is essential that the quantity of CO₂ passing through the solution be greater than is required stoichiometrically.

TITLE Cementation of Antimony With Metallic Precipitants (Tsementatsiya sur'my metallicheskimi osaditelyami)

PERIODICAL Tr. In-ta metalla i gorn. dela. AN GruzSSR, 1957, Vol 8,
pp 135-140

ABSTRACT Conditions permitting maximum extraction of Sb from solutions were studied and various other precipitants were investigated in an effort to replace them with Al. The degree of extraction of Sb increases as the quantity of metallic Al introduced into the reacting mixture is increased; it reaches a maximum when the amount of Al is twice as great as the stoichiometric value. Introducing an excess of NaOH into the initial solution reduces the duration of the cementation process from 3 to 1.0-1.5 hours and increases the degree of extraction of Sb (up to 94%). In the case of aluminum-silicon the degree of Sb extraction increases with increasing temperature and reaches its maximum value (65.8%) at 100°C. Maximum extraction of Sb (98.8%) is attained at an SB-SiAl ratio of 8. G.S.

TITLE Raw Ammonia Water Dissolves Sulfide Minerals Containing
Antimony and Arsenic (Svarya ammiochnaya voda kak rast
voritel' sul'fidnykh mineralov sur'my i mysh'yaka)

PERIODICAL Tr. In-ta metalla i gorn. dela. AN GruzSSR, 1957, Vol 8,
pp 141-146

ABSTRACT The process of leaching of sulfide Sb and As ores with raw ammonia water was investigated. Up to 90-92% of Sb and 80-85% of As can be extracted in a leaching operation provided the ore is crushed to a particle size of 2-3 mm, the liquid-to-solid ratio is approximately 2:1, and the pulp is vigorously stirred for a period of one hour. As and Sb are separated from ammoniacal solutions in the form of sulfides.

TITLE Carbonization of Alkaline Sulfide Antimony Solutions (Karbom-zatsiya shchelochno-sul'fidnykh rastvorov sur'my)

PERIODICAL *Tr. In-ta metalla i gorn. dela, AN GruzSSR*, 1957, Vol 8, pp 147-153

ABSTRACT The carbonization process was carried out in a 300-cc reaction vessel. 98% of CO₂ from a tank were introduced through a constant-pressure vessel. The quantity of gas being supplied to the reactor vessel was determined by means of a transparent tube-type flow gage. The carbonization of the solution showed that the reaction of Sb sulfo salt with CO₂ produces an Sb sulfide precipitate and that the compound NaHCO₃ forms in the solution accompanied by the liberation of H₂S. If the temperature is raised to 100°C the carbonization process terminates in the formation of Na₂CO₃. The amount of CO₂ needed for complete carbonization of the solution is a direct function of the concentration of Sb in the solution. Best results were obtained by carrying out the process at room temperature, by increasing

Card 1/2

TITLE: Extraction of Arsenic From Sulfidic Arsenous Ores (Poluchenije mysh'yaka iz sul'fidnykh mysh'yakovistykh rud)

PERIODICAL: Tr. In-ta metalla i gorn. dela. AN GruzSSR, 1957, Vol 8,
pp 155-161

ABSTRACT: The process of leaching of sulfide As ores with alkaline and
alkaline-sulfide solutions was studied, and the possibility of
extraction of As from these solutions was investigated. Na_2S
solution was employed in the leaching process. 95% of As can
be extracted by a 6% solution of Na_2S from a pulp that has been
stirred for a period of four hours, while 91.7% can be extracted
by a 13-percent NaOH solution. Metallic As may be extracted
from alkaline-sulfide As solutions by means of carburization.
By neutralizing alkaline-sulfide solutions with H_2SO_4 the As
can be extracted completely in the form of arsenopyrite.
