AUTHOR: Giyasov, G., Engineer

98-58-6-15/21

TITLE: The Action of the Current on Protruding Rods of the Concrete Reinforcements (Deystviye potoka na vypuski armatury)

PERIODICAL: Gidrotekhnicheskoye Stroitel'stvo, 1958, Nr 6, pp 46-47 (USSR)

ABSTRACT: The author describes how the faulty use of protruding rods in concrete blocks of the submerged part of the dam built on the Syr-Dar'ya river for the Kayrak-Kumskaya GES (Kayrak-Kum Power Plant) involved additional expenses and lowered the solidity of the junctions of these blocks. He enumerates the types of protruding rods used in the dam, which were twisted and broken by current vibration. To avoid these mistakes, he defines various protruding rods, which serve as joints, when the upper part of the dam is built.

Title : Notes on the Germination of Rice

Orig Pub : Biologica, 1956, 11, No 5, 257-271

Abstract : The germination of rice depends on the amount of oxygen in the air; therefore, the flooding of young crops immediately after planting is not recommended. Before planting, the rice has to be moistened. The optimal embedding depth is 2 cm. Surface and deep plantings are inadmissible.

PURPOSE: This book is intended for scientists and engineers engaged
in the production of synthetic zeolites (molecular sieves), and
for chemists in general.

Card 1/3B

Synthetic Zeolites: (Cont.)

SOV/6246

COVERAGE: The book is a collection of reports presented at the First Conference on Zeolites, held in Leningrad 16 through 19 March 1961 at the Leningrad Technological Institute imeni Lensoveta, and is purportedly the first monograph on this subject. The reports are grouped into 3 subject areas: 1) theoretical problems of adsorption on various types of zeolites and methods for their investigation, 2) the production of zeolites, and 3) application of zeolites. No personalities are mentioned. References follow individual articles.

owskiego 9, Kraków - WIAD. LĘK. 1957, 10/20 (929-943)

All problems of feeding of infants are discussed in detail. The principles are:
history, anatomy and physiology of lactation, difficulties of breast feeding, re-
quirement of nourishment, physiology of sucking, milk, technique of breast feed-
ing, supplementary feeding and weaning, and artificial feeding with several
formulas.

"Diseases of Modern Civilization. I. Leukemia."

Warsaw-Krakow, Przeglad Lekarski, Vol 19, Ser II, No 3, [24 Mar] 63, pp 175-177.

Abstract: [Author's Russian summary modified] Paper read at session of Commission for Medical Sciences (Komisja Nauk Medycznych) of PAN [Polska Akademia Nauk, Polish Academy of Sciences] in drive to interest physicians in atomic medicine and araze their responsibility to future generations. Author lists and grades sources of ionizing radiation (natural and fall-out), discusses its immediate and long-range physiological and genetic effects, and natural defense of body as revealed in studies (Belgium and USA) and witnessed by the fact that leukemia occurs primarily in children and aged. Further using leukemia as an example he cites seven factors linking fall-out radiation with leukemia incidence, and quotes specific data on the rise of this disease in Poland as a whole, and in several particular localities. No references.

Warsaw-Krakow, Przeglad Lekarski, Vol 19, Ser II, No 5, 22 May 63, pp 235-237

Abstract: [Authors' English summary modified] Authors report their findings following administration of lyophilized foetal tissues to children with diseases of the central nervous system, endocrine system, mesenchymal tissues, kidneys, Blood, Down's disease, etc. In view of the severity and considered incurability of some of the conditions, improvement obtained was rather high, and authors recommend this treatment, particularly for diseases of the endocrine glands and Down's disease, as well as some diseases of the central nervous system. The 10 references contain one each of Polish and Swiss, and four each of German and English sources.

DATE: 1952. 09. 05. Tashkent, USSR.

PREFERENCE: A survey was conducted dealing with the quality
of some of the Akal-Tashkent Revolvers (ATR) of
various types and various ages. In order to de-
termine the quality of metalmurgical products,
the main physical standard was established (to
within 10% by measure) in addition to those
being measured. Weighted, as well as visual
optically and histologically examined. It was
the difference of the total weight of ATR's
in greater than the other brands, the same;

ABSTRACT : The journal contains information on the development of the cattle industry in the USSR. It is reported that the Soviet Union has made significant progress in the field of cattle breeding. The article discusses the work of the Ministry of Agriculture of the USSR, which has been instrumental in the modernization of the cattle industry. The article also highlights the importance of the role of the Ministry of Agriculture in the development of the cattle industry. The article concludes by noting that the Soviet Union has made significant progress in the field of cattle breeding, and that the Ministry of Agriculture has played a key role in this process.

TITLE: Double regulation of multi-piston fuel pumps

PERIODICAL: Referativnyy zhurnal, Silovyye Ustanovki, no. 1, 1962, 70 abstract 42.1.367 (Elektr. i teplovozn. tyaga, 1960, no. 11-26-27)

TEXT: Double regulation of multi-piston fuel pumps, namely according to rated and idling speeds, is proposed with a view to preventing irregular fuel supply to the cylinders at minimum speed. Two variants of the modified drive scheme of the rack of the fuel pump section of the D50 Diesel engine are given, as well as the characteristics of fuel supply obtained. There are 3 figures.

TITLE: On the methods of thermomechanical curves of polymers. 4. The investigation of powder specimens (beginning with this (No. 4) report, the major title also covers earlier sections 1, 2, and 3)

SOURCE: Vy*sokomolekulyarny*ye soledineniya, v. 6, no. 2, 1964, 281-286

TOPIC TAGS: polymer, powder polymer, compaction, tablet formation, deformation, pressing process, relaxation, elastic deformation, vitrification, thermomechanical curve, polyvinylchloride

ABSTRACT: Problems associated with the recording of thermomechanical curves of powdered materials compression have been considered. Powdered polyvinylchloride PF-4 was used as the issuing material. Tablets, 4 x 2 mm, were pressed under 420 - 4200 kg/cm², sustaining force-induced elastic deformations. When heated under various loads, at temperatures up to 300C, the tablets expanded (the higher the original compression load, the greater the expansion). Beyond 2100 kg/cm² the expansion decreased. It was also found that the duration of the original compression had an effect on the subsequent expansion. The maximum expansion was obtained

Card 1/2

ACCESSION NO: AP4017639

in tablets held in compression for 2 minutes. Heating of the tablets for 1 hour at 100C resulted in a loss of their subsequent ability to expand, their behavior being that of a typical amorphous linear polymer. Samples of powdered polyvinylchloride containing various quantities of comminuted sand or aluminum oxide (when pressed into tablets) showed a lesser degree of expansion, as compared with the 100% pure polymer samples. These samples acquired the capacity of being compressed into monolithic blocks under proper application of heat and pressure. Polycondensation of powdered diallylphthalate with benzylmethacrylate at 150C for 30 minutes yielded products free of expansion ability. Thanks are given to B. M. Zuyev for a sample of the material. Orig. art. has 5 charts.

TITLE: Cable Lead-Sheath Fault Localization by Radon [Oprredeleniye mesta povrezhdeniya svintsovoy cholochnki kabela s pomoshch'yu radona]

PERIODICAL: Tr. Sektsii provedn. svyazi, Ukr. resp. pravl. Nauchno-tekhn. o-va, raditekhn. i elekrosvyazi, 1956, Nr 2, pp 64-70

ABSTRACT: The Kiev branch office of TsNIIIS is developing a method of localizing cable lead-sheath faults by means of the radioactive inert gas radon. Experiments staged by the authors permit drawing the following conclusions: (1) In order to precisely localize the cable-sheath fault, the shortest possible fault-containing segment should be determined by a manometric or electric-signaling method. (2) The rate of radon flow in a $3 \times 4 \times 1.2$ * cable, at an air pressure of 1 atm, lies within 1-1.2 km/hour. (3) Radon diffusion to the surface of the ground in a sandy soil from a depth 1.2 m, with an average leakage of 6.47 mm^2 , takes 1.5-2 hours. (4) Radon can be detected on the surface by radiometric

Cable Lead-Sheath Fault Localization by Radon

devices responding to α - β - γ -radiations the radioactivity covers a small spot with a radius of 0.6-0.8 m, and with a maximum in the center of the spot.

(5) The radiation maximum of the diffused radon can be displaced to one or the other side by not more than 1-2 m. (6) Soil temperature and moisture do not materially affect the radon diffusion under winter or summer conditions.

(7) The detection of a leakage spot in a cable sheathing by means of radon is practically possible. Attention is called to the necessity of precautions in handling radon.

CABLE

"Determination of Leak in Cable Sheath with the Aid of Radioactive Gases" by T.V. Abramova, V.A. Gizzulov and S.I. Meduzhiy, Engineers, Junior Scientists of the Cable Division, Scientific Research Institute for Communication, Vestnik Svyczi, No 12, December 1958, p 4.

Description of a method that permits determination of leakage in a cable with an accuracy to within 50 meters. The radioactive gas usually employed is radon and methyl bromide. A gamma counter is used as a detector.
