Pine-tree resin for emulsification in wet spinning of flax. B. V. Ponomarenko and Yu. N. Gladchikova. *Tekstil. Prom.* 10, No. 2, 25(1950).—The compn. of pine-tree resin (I) suitable for emulsification in wet spinning of flax was detd. as follows: 60–135 acid no.; 100–175 sapon. no. (both in mg. KOH/1 g. I); 20–40% resin acids; 30–50% resin oils; 10–15% phenols; ratio of resin acids to oils must be about 1:2.5.

AUTHORS: Gladek, L. and Ralek, M.

TITLE: New Type of High-current Stabiliser

PERIODICAL: Pribory i tekhnika eksperimenta, 1960, No. 5, pp. 113 - 116

TEXT: The stabilisation of direct currents can be achieved by two methods. In the first method (Sommers et al, Ref. 1) the error signal is produced by comparing the voltage drop across a known resistor R_c with the emf of a standard cell (Fig. 1). In the case of large currents this is difficult because it is difficult to maintain the resistance R_c at a constant value.

The second method (Fig. 2) is more convenient in this respect. Here, the error signal is produced by comparing the magnetic field of a solenoid which carries the current to be stabilised with the magnetic field of a standard permanent magnet, as described by Peregud (Ref. 2). The device described in the present paper is of the second type. The particular feature of this device is the use of an ordinary electronic tube placed directly in the magnetic field of the solenoid as the source

85356

S/120/60/000/005/028/051
E032/E314

New Type of High-current Stabiliser

of the error signal. The stabiliser whose design circuit is shown in Fig. 5 employs two symmetrically connected pentodes. Each of these pentodes is placed in a coil. The two coils are identical and carry the current to be stabilised. One of the coils is placed in the field of the permanent magnet which produces an induction B_{II} in the region of the tube. The current flowing through the coils produces in each of them an induction B_I. The field due to the coil is directed in opposition to the field of the magnet. In this way, one of the pentodes is in an induction field $B_{II} - B_I$ while the other is in an induction field of B_I. In the stabilisation of the current the decisive factors are the absolute magnitudes of these two quantities. If an induction B_o corresponds to a current I_o, then it is convenient to choose $B_{II} = 2B_o$. When the current I_o passing through

85356

S/120/60/000/005/028/051
E032/E314

New Type of High-current Stabiliser

the coils changes by ΔI , then B_o changes by some quantity ΔB . One of the pentodes will therefore "see" and induction of $|B_o + \Delta B|$, while the other will "see"

$|B_n - (B_o + \Delta B)| = |2B_o - B_o - \Delta B| = |B_o - \Delta B|$. Thus, when the current changes by ΔI , the anode current of one of the tubes will increase, while that of ther other tube will decrease. As a result, there will be a constant voltage difference between the anodes and the polarity of this difference will depend on the sign of ΔI . This error signal is then amplified and the output is used to re-establish the original value of the current through the coils. The device has been used to stabilise the supply current of a 2 kW electromagnet designed for studies of thermomagnetic properties of ferromagnetics. It was found that the device could be used to stabilise currents up to 5 A to within 0.1%/hour.

Toxicity of hexachloran (benzene hexachloride) to warm-blooded animals. V. A. Fortushnyi and I. N. Gladenko. *Veterinariya* **28**, No. 2, 33-8(1951).—Benzene hexachloride administered internally is highly toxic to white mice, rabbits, dogs, and horses. Administration of the pure substance at 0.5 g./kg. or higher is definitely toxic to rabbits and dogs, and at 0.025 g./kg. to horses; lethal doses are 0.75 g./kg. and 0.1 g./kg., resp. Externally applied to the skin the pure substance is not toxic to horses or cattle (used as 1:4 aq. suspension of 12% dust with neutral filler). Rabbits and dogs are less susceptible to intoxication on internal administration than horses at the same dosage.

"Control of Blood-Sucking, Two-Winged Insects, by Means of Aerial Dispersion of Contact Poisons," by I. N. Gladenko, Cand. Vet. Sci., and V. A. Fortushnyy, Ukr. Inst. of Exptl. Vet. Med., Veterinariya, No 3, pp 37-40, Mar 53.

Discusses exptl attempts to destroy the breeding places of harmful insects, such as mosquitoes, horseflies, etc., by aerial dispersion of DDT and hexachlorane. Ascribes the highly satisfactory results obtained to careful prepn of the contact poison, its proportions being calculated as 1-2 kg per hectar; also to the frequency of the operation, covering the same area not less than three times a month. The effectiveness of DDT and hexachlorane has been found to be approx the same. In bodies of water such as ponds, reservoirs, etc., these poisons showed essentially no adverse effects on zoological plankton, benthos, and fish.

1/ Taste and toxic properties of meat, fat, and milk of animals which receive fodder treated with benzene hexachloride. I. N. Gladenko. *Gigiena i Sanit.* 1954, No. 3, 39–44.—BHC administered to an animal is deposited predominantly in the fatty tissue and remains there for as long as 8 months, giving the meat an unpleasant moldy odor. Fat and meat of animals fed for a long time with fodder that contains BHC appear to be harmless to exptl. animals and have normal taste qualities, although the fat can acquire a mild moldy odor. BHC begins to be eliminated in cow milk within 12 hrs. after feeding BHC-contg. fodder, and elimination persists for 14–15 days, with a max. in 1–2 days.

Title : Meat, fat, and milk of animals that were given hexachloran or feed containing hexachloran

Periodical : Veterinariya, 7, 52-54, Jul 1954

Abstract : It has been proven that meat products of animals, that were fed hexachloran for a long period of time, are harmless. Plants treated with hexachloran are also harmless. Hexachloran which enters the animal organism in a pure state becomes stored in the adipose tissue; it secretes with milk 12 hours after cows have been fed with it. Animal meat and fat containing hexachloran did not produce toxic symptoms in kittens, dogs, and hogs that were fed with such meat and fat for a long period of time. The author states that although meat and fat containing hexachloran may be safely given to animals as food, he does not think it is fit for human consumption.

Toxicity of food substances obtained from plants treated with benzene hexachloride (BHC). I. N. Gladenko and V. A. Fortushnyĭ. *Veterinariya* 31, No. 3, 89-93 (1954).—Beet plants which had been treated with 30–40 kg. BHC/ha. two or more months previously are harmless as feed for farm animals. Tubers of beets or potatoes grown in soil treated with 12% BHC dust at dosage not over 100 kg./ha., or from seeds which were pretreated with BHC, are also usable for feed without harm. Grass and hay can be used as feed provided the BHC treatment was 3–4 weeks before harvesting. The fat of animals on the latter feed can acquire a peculiar odor.

Abstract: It was demonstrated in experiments on rats with the aid of the conditioned reflex method that biomycin (I) and levomycetin exert an action upon the inhibition processes in the cerebral cortex. In moderate doses (25 mg/kg) this is manifested by intensification of the inhibitive processes

USSR / Pharmacology, Toxicology. Chemotherapeutic Preparations. V

Abs Jour: Ref Zhur-Biol., No 9, 1958, 42461.

Abstract: and development of diffuse inhibition. In large doses I (100-200 mg/kg) complete inhibition of conditioned reflex is observed, taking place during the first 2-3 hours after administration and lasting for 2 days. Full reestablishment of conditioned reflex activity takes place usually within 6-9 days. I causes more marked and constant changes than levomycetin. It is postulated that cortical inhibition plays a definite role in the mechanism of antibiotic action. -- A. M. Ivanitskiy

PHASE I BOOK EXPLOITATION 1155

Dubinin, Nikolay Petrovich; Gladilin, Anatoliy Nikolayevich; Zhevtunov, Petr Prokhorovich; Krasavin, Vasiliy Stepanovich; Nazarov, Sergey Tikhonovich; Panchenko, Konstantin Petrovich; Popov, Viktor Aleksandrovich; Popov, Yevgeniy Aleksandrovich; Rastorguyev, Ivan Sergeyevich (Deceased); Storozhev, Mikhail Vasil'yevich

Tekhnologiya metallov (Technology of Metals) 3d ed., Moscow, Mashgiz, 1958. 564 p. 25,001 copies printed.

Ed.: Dubinin, N.P., Candidate of Technical Sciences; Ed. of Publishing House: Shemshurina, Ye.A.; Tech. Eds: Uvarova, A.F. and Model', B.I.; Managing Ed. for Literature on Metal Working and Tool Making (Mashgiz): Beyzel'man, R.D., Engineer.

PURPOSE: This is a textbook for students taking courses in machine design and manufacture at vtuzes.

Card 1/ 25

COVERAGE: The book contains data on the structure and properties of metals and alloys, on nonmetallic materials, on methods of forming metals and alloys (casting, forging, stamping), on methods of machining metals and working nonmetallic materials, and on all types of metal-processing equipment. Authorship of the book is as follows: Part I, N.P. Dubinin; Part II, P.P. Zhevtunov; Part III, N.P. Dubinin; Part IV, M.V. Storozhev and Ye.A. Popov; Part V, S.T. Nazarov; Part VI, K.P. Panchenko, V.S. Krasavin, and A.N. Gladilin; Part VII, I.S. Rastogruyev (deceased) and V.A. Popov. All authors are Candidates of Technical Sciences, with the possible exception of Ye.A. Popov.

TITLE: Professor Vyacheslav Semenovich Tulin on his 60th birthday

SOURCE: Elektrichestvo, no. 3, 1965, 90

TOPIC TAGS: mechanical engineering personnel, electric engineering personnel

ABSTRACT: Professor V. S. TULIN was born in November 1904 and graduated from the Kharkov Engineering Institute in 1925. He has since then specialized in the application of electric drives for the mining industry, in low-voltage apparatus and more recently in automation. At the present time he is the chairman of the Department of Automation and Control Machinery at the Moscow Institute of Radio-Electronics and Mining Electromechanics. He has made major contributions in his field: he is the author of 80 published works including a textbook on the automation of production processes in the mining industry; he also received an award in 1948 in connection with the Donets Basin development. He now participates in ministerial councils and committees concerned with scientific-research work, industrial coordination, also secondary and higher education. Orig. art. has: 1 figure. [JPRS]

Electrical Equipment

"Safety in the Use of Electricity for Underground Mines," L. V. Gladilin and V. S. Kravchenko, Institute of Mining, USSR Academy of Sciences, 2 pp

"Gornyy Zhurnal" Vol CXXI, No 6

Usually power of 500 - 550 watts is used for electrification of ferrous and nonferrous mines in the USSR -- 350 watts is used in coal mines. Recommends various safety features to be adopted in mines.
