0100, 011.

Final report of the study on the effects of the  
on the health of the population. (The study was conducted in 1970-71.)

1. The study was conducted in the city of [redacted] in  
the state of [redacted].

Stable diazo compounds and their application by  
Akshira and I. Golob. *Org. Chem. Ind. U.S.S.R.*  
1967, 10, 1937. Rapid colors for printing should  
be made 12 hr. before use. The following general for-  
mula is recommended: dye (0.5 g), castor oil soap 2%, thick-  
ener 0.5%, Na<sub>2</sub>HPO<sub>4</sub> 0.5%, H<sub>2</sub>O at 20-25°C, starch-tragacanth  
thickener 0.5% and cold H<sub>2</sub>O 80 g. This gives good results  
for printing viscose and cotton fabrics, but not silk. An  
analogous formula, in which the thickener is gum arabic  
instead of starch-tragacanth, is recommended for silk. W. C. A.

ROFCOMB, F.M.

3712. Determination of vat dyes on the fibre.  
 L. M. Golob, Muzhansk Section, K. E. Voron-  
 shilov Sci. Res. Inst. of Organic Intermediates and  
 Dyestuffs. *Zash. Prikl. Khim.*, 1967, 30 (2), 330-  
 333. The relative effects of various organic sol-  
 vents, glycerol, ethanediol, triethanolamine, 2-  
 ethoxyethanol and triethylene glycol, present in a  
 soln. also containing NaOH and disulfite, on  
 the removal of vat dyes from printed calico are  
 studied. Triethylene glycol is as effective as 2-  
 ethoxyethanol which is normally used for the pur-  
 pose, and the soln. of the leuco dyes are stable and  
 easily analysed colorimetrically. Polycyclic ketone  
 dyes are easily removed from fibres in the cold, but  
 thioindigo dyes require heat. G. S. SALTZ.

SOV/112-59-1-832

Translation from: Referativnyy zhurnal. Elektrotehnika. 1959, Nr 1, p 111 (USSR)

AUTHOR: Golomidov, I. N.

TITLE: Investigation of a Continuous Automatic-Control System That Comprises a Single-Stage, Multi-Winding Compensated Direct-Axis Rotating Amplifier

PERIODICAL: Izv. vyssh. uchebn. zavedeniy. Gornyy zh., 1958, Nr 1, pp 115-129

ABSTRACT: Results are presented of theoretical and experimental investigations of a laboratory model of the electric drive of an EVG-6 (8) dredge turning mechanism; the drive is of the "generator-motor" type, and is excited by a 3-winding compensated rotating amplifier. To ensure high-speed operation and a steep mechanical characteristic of the main motor, negative current feedbacks and a voltage cutoff on the generator are used. The amplifier is actually a conventional DC machine with a compensating winding distributed in the slots of its pole pieces and with saturable poles. The poles also carry a control winding, current and voltage feedback windings, and an AC demagnetizing winding. Insofar as the system has a voltage cutoff, the starting

Card 1/2

SOV/112-59-1-832

Investigation of a Continuous Automatic-Control System That Comprises a . . . .

process is considered as consisting of two stages. During the first stage, the voltage feedback is inactive and a forced acceleration of the motor takes place. Differential equations describing system behavior during both stages are set up; structural diagrams are presented. The resulting equation of the main-motor speed is of the third order. The system is checked for stability according to the Routh-Hurwitz criterion. Formulae are offered for constructing the curves of current, motor rpm, and generator voltage during acceleration. The experimental investigations were conducted on a laboratory model. Design results showed good agreement with experimental results. System simplicity and reliability of the rotating-amplifier-controlled drive are noted. A larger size and lower gain as compared to the amplidyne, as well as the need for correcting circuits to reduce initial current peaks in the main circuit are noted as disadvantages.

TITLE: The Selection of Variants of Chamber Systems of Mining With Breaking of the Ore by Deep Blast Holes (Vybor variantov kamernykh sistem razrabotki s glubokoy rudy slutokimi skvazhinami)

PERIODICAL: Gornyy zhurnal, 1968, Nr 12, pp 19 - 22 (RUSS)

ABSTRACT: Different variants of chamber-level or sublevel drift systems could be adapted in mines of the same mining and geological conditions. At present the system of sublevel drifts or cross-drifts with ore blasting by fan-like series of blast holes from single or twin sublevel drifts, is most widely used abroad and in the Soviet Union. The authors built a table (table 1) in which technical and economic indicators for different variants of chamber-level and sublevel drift systems were given according to Soviet and foreign data. Special experiments made with all these variants in a Soviet mine showed the expediency of the system of sublevel drifts or cross drifts with ore blasting by fan-like series of blast holes, either from a single or

The Selection of Variants of Chamber Systems of Mining with Breaking of the Ore by Deep Blast Holes

twin sublevel drifts. The single sublevel drifts or cross drifts were used when the ore deposits were not important by their thickness and commercial value, and the chambers were small. The twin sublevel drifts were mainly used when the ore layers were of a larger magnitude and the chambers were wider. The level chamber system was used for the mining of isolated resistant ore-bodies, or on the sides of the deposit where the strength of the pillars was not so important. There are 2 tables and 2 graphs.

Construction of underground structures (Stroitel'stvo podzemnykh sooruzheniy)  
Moscow. Izd-vo "Nedra", 1966. 293 p. illus., biblio. 2450 copies printed.

TOPIC TAGS: construction, mining engineering

PURPOSE AND COVERAGE: This book is intended for engineering and technical workers of construction, scientific-research, and design organizations studying the problems of building underground installations; it can also be used by workers of mine-construction organizations. In the book are discussed the basic problems of conducting mining operations during the construction of underground installations. There are 97 references, 72 of which are Soviet.

TABLE OF CONTENTS [abridged]

Ch. I. Basic methods of conducting mining operations during construction of underground chambers -- 9

Ch. II. Foreign experience in conducting mining operations during construction of underground chambers -- 22

Ch. III. Drilling boreholes and blast holes -- 55

ACC NR: AM055814

- Ch. IV. Blasting operations -- 83
- Ch. V. Mechanization of underground loading and transportation operations -- 118
- Ch. VI. Progressive methods of reinforcing mining excavations -- 145
- Ch. VII. Methods of excavating underground chambers in hard rocks -- 175
- Ch. VIII. Excavation methods providing for chamber-wall reinforcement during the excavation of a massif -- 178
- Ch. IX. Excavation methods by which chamber walls remain open during excavation -- 224
- Ch. X. Examples of calculations relative to work organization and the selection of equipment -- 233
- Ch. XI. Ventilation and dust suppression during the excavation of underground chambers -- 249
- Ch. XII. Several problems of underground installation stability -- 280

VI  
Dissertations. Dept. of Technical Sciences, Jul-Dec 1957.  
Vest. Ak Nauk SSSR, 1958, No. 4, pp.123-123 (USSR)

At the Mining Institute the following dissertations were defended:  
for the degree of Doctor of Technical Sciences:

A. Ch. MUBIN - Investigation of the System With Open Purification Space With  
Adaption to the Exploitation of Sloped Deposits of Dzhezkazgan.  
M. A. AL'TSHULER - Improvement of the Exploitation System by Means of Mine  
Production.

F. A. BAPSIKOV - Investigation of the Important Parameters of the Subterranean  
Extraction by Means of Deep Gaps in the Exploitation of Thick Deposits of Solid  
Ores With a Magnetic Anomaly of Kursk.

V. I. GOLOMOLZIN - Determination of the Optimum Parameters of the Pits Under  
the Condition of the Krasnodarskyak District of the Donets Basin.

G. P. NIKONOV - Investigation of the Following Out of Uncovered Rocks in a  
Hydraulic Excavator Exploitation of Coal Deposits.

A. D. POMORTSEV - Investigation of the Suitability of the Exploitation of Steep  
Layers of a Thickness of 2-4, by Means of a Shield System.
