AUTHOR: Grashchenkov, N.I., Corresponding Member of the USSR Academy of Sciences

TITLE: Lenin's Reflection Theory and the Modern Physiology of the Sense Organs (Leninskaya teoriya otrazheniya i sovremen-naya fiziologiya organov chuvstv)

PERIODICAL: Priroda, 1958, ⁴⁷ Nr 4, pp 3-12 (USSR)

ABSTRACT: The author cites Lenin's Reflection Theory and points out that it is gradually becoming a basic law with each new discovery made in the field of the physiology of the organs of sense. This law contends that the source of perceptions is the world existing outside our consciousness and beyond the sphere of our influence. There is one photo and three references, two of which are English and one Soviet.

AVAILABLE: Library of Congress

Chesnokov, Candidate of Philosophical Sciences (Scientific Secretary)

Purpose: This book is intended for natural scientists and philosophers who are interested in coordinating Communism philosophy with science. Content: This is a publication of the transactions of the All-Union Conference on Philosophic Problems of Natural Science which took place in Moscow, October 21-25, 1958. The Conference was attended by 200 academicians and 30 corresponding members of the Academy of Sciences USSR, 15 academicians and 35 corresponding members of the public and special sciences, 186 university and college workers, 100 workers of scientific research institutes, and 5 Party officials. Chairman of the Organization Committee, K.V. Ostrovskij, was to unite the efforts of Soviet philosophers and scientists in the dialectical materialistic interpretation of the achievements of modern science, and to provide the philosophical background required for the study of modern scientific problems.

TYPE OF DOCUMENT:	Tezisk Academician SSSR, 1952, № 10 pp 132-138 (rus)
ABSTRACT:	At the end of October last year an All-Union conference took place which dealt with these problems. The conference had been convened by the Akademika nauk (Academy of Sciences) and been Ministerstvo Vneshnei oborony SSSR (Ministry of Defense) and the Ministry of the USSR). More than 600 well-known experts in the spheres of sciences and philosophy took part, among them academics and Corresponding Members, Academy of Sciences, USSR, representatives of the Academies of the Union Republics, and Branch Academies as well as scientists from scientific-research institutes and universities, Research Institutes and scientific-clinical organizations, Germany, Hungary and Czechoslovakia were present. It was the aim of the conference to unite the creative powers of Soviet Philosophers and scientists for the purpose of a dialectic-materialistic generalization of the achievements of modern science and for raising its level, which is intended to contribute towards a solution of the most important scientific problems in as short a period as possible.
Cards 1/4	In the discussion of the opening speech, by Academician A. N. Gerasimov, President of the All USSR and K. V. Ozerov, Vice-Chairman of the Committee for the Organization of the Conference on the occasion of the opening speeches, the following reports were heard and discussed: M. S. Mikhlin, Academician, spoke about Lenin's "materialism and empiricism" as the great ideological weapon for the perception and transformation of the world. M. M. Osipyanov, Academician of the All World, dealt in his report with V. I. Lenin and the philosophical problems of modern physics. B. M. Kedrov, Doctor of Philosophical Sciences, Corresponding Member, Academy of Pedagogical Sciences USSR, reported on the interaction in Nature of the forms of movement of matter. V. A. Pukinskij, Corresponding Member, Academy of Sciences, spoke about the interpretation of quantum mechanics. D. A. Aleksandrov, Corresponding Member, Academy of Sciences, spoke about the philosophical meaning and the importance of the theory of relativity. S. L. Sobolev, Academician, and A. A. Lyapunov, Professor, deals with Cybernetics and "Technical" sciences.
Cards 2/4	I. A. Abrikosov, Academician, spoke about some astrophysical problems of cosmology. F. A. Berezin, Academician, and G. M. Frank, Corresponding Member, All USSR, reported on the role of Physics and Chemistry in investigating biological problems. A. I. Oparin, Academician, spoke about the formation of life. In the light of the achievements of modern natural sciences, N. G. Chetverushkin, Corresponding Member, spoke about the physiology of the nervous organs. Zanovskij, Corresponding Member, spoke about the problems expressed by M. S. Chaitin in Physics is approaching a crisis in Physics is approaching.

TITLE:
All-Union Conference on Philosophical Problems of Modern Natural Science (Vsesoyuznoye soveshchaniye po filosofskim voprosam sovremennoy estestvennosti) By the Editor (Or reaktsii)

PUBLICATION: Departr. fizicheskikh nauk, 1959, Vol. 68, No. 4, pp. 717-727 (USSR)

ABSTRACT:

The above conference took place at Moscow in October 1958; it was attended by more than 600 scientists, among them 20 Academy members and 30 Corresponding Members of the USSR, as well as by delegates from Bulgaria, Hungary, East Germany, and Czechoslovakia. The following lectures delivered at the conference are listed: Academician M. D. Mikhlin (on Lenin's book "Materialism and Empirio-Criticism"), Academician A. S. P. N. Chekhov (on "Materialism and the Philosophical Sciences Problems of Modern Criticism"), Doctor of Philosophical Sciences B. M. Kedrov (On the Relationship of the Forces of Motion of Matter in Nature), Academician V. A. Tok (Interpretation of Quantum Mechanics), already published in Uspishi fizicheskikh nauk, 1957, Vol. 66, No. 4; Corresponding Member of USSR A. D. Aleksandrov (The Philosophical Content of and the

CARD 1/3

Significance of the Theory of Relativity"), Academician F. A. Berezin (on Dialectical Problems of Comogeneity), Academician S. V. Sobolev and Professor A. N. Neimark (Cybernetics and Natural Science), Corresponding Member A. N. Bush (on Dialectical Problems of the Origin of the Biological Problem), Academician A. I. Oparin ("The Problem of the Origin of Life in the Light of the Progress Made by Modern Natural Science"), and finally, Corresponding Member N. D. Geraschenko ("Lenin's Theory of Reflection and the Modern Physiology of the Sensory Organs"). About 50 delegates took part in the discussion of these lectures. Here, the introductory speech delivered by the President of the USSR, Academician A. N. Nesmeyanov, is reproduced, and so is the closing speech by Corresponding Member A. S. USSR P. S. Padogorev, and finally a resolution passed by the All-Union Conference on philosophical problems of modern natural science is given under the title "On the Tasks of dealing with Philosophical Problems of Natural Sciences". The resolution essentially contains an appeal for the

investigation of all new scientific facts in the sense of the theory of Marx and Lenin and of dialectic materialism for adaptation of ideas to the resolution of the 20th Party Congress, cooperation of institutes, coordination of research work, as well as some problems of organization. In conclusion, a list of printed series is given, in which the lectures delivered during the conference were published. There are 6 Soviet references.

(EI904), austenite-martensite steel, carbon admixture, nickel admixture, phase

ABSTRACT: Austenitic-martensitic steel SN-2 (EI904) is now being smelted in arc furnaces of industrial capacity. Small inclusions of carbon and nickel alter the phase composition of steel, thus giving it the desired properties. The chemical composition of the steel (in %) is:

C	Mn	Si	Cr
0,05-0,09	<0,7	<0,7	14,5-16,5
Ni	Al	S	P
7,0-9,4	0,9-1,4	<0,025	<0,025

TITLE: On the Theory of the Scattering of Particles on Nuclei (K teorii rasseyaniya chastits na yadrakh)

PERIODICALS: Zhurnal Eksperimental'noy i Teoreticheskoy Fiziki, 1958, Vol. 34, Nr 1, pp. 251 - 253 (USSR)

ABSTRACT: A nucleus-model in the form of a degenerate Fermi gas was used in the investigation of the scattering of particles on nuclei. This makes possible the estimation of the effects of scattering connected with the Pauli principle. When the differential cross section of the collision of a particle with a free nucleon is isotropic, independent of the energy and equal to $\sigma_0/4\pi$, the total cross section of the collision of the particle with one of the nucleons of the nucleus can be obtained in the form $\sigma = \sigma_0 F$. In this connection the factor F is a function of the two variables $w = p_F/p$ and $\alpha = m/m_N$. m and p signify the mass of the particle impinging upon the nucleus and its impulse in the laboratory system of coordinates respectively; m_N and p_F signify the mass of the nucleon and the impulse on the Fermi surface respectively. The investigation of the range $\alpha > 1$ permits the construction of the function on the entire surface w, α (taken strictly: in the first quadrant).

TITLE:

The Dependence of Cross Sections on Energy Near the Threshold
for the Reaction of Multiple Production (Zavisimost'
secheniy ot energii vblizi poroga dlya reaktsiy kratnogo
rozhdeniya)

PERIODICAL:

Zhurnal eksperimental'noy i teoreticheskoy fiziki, 1958,
Vol 35, Nr 3, pp 719-725 (USSR)

ABSTRACT:

The energy-dependence of multiple production cross sections
may be determined in a general manner **independently of any cer-**
tain reaction-mechanism. For the final phase of a two-particle
reaction that developed by Wigner (Ref 1) was shown. The prob-
lem becomes very simple in the case of reactions in which,
during the final stage, N neutral particles with a zero orbital
moment are emitted simultaneously from an infinitely heavy
complex (nucleus) (Ref 2). Hart (Khart) et al. (Ref 3) investi-
gated the individual case N=2 (one neutral and one charged
particle) with any orbital moment in consideration of nuclear
recoil. In the present paper the author investigates the case
of N particles emitted at random and having the masses $\mu_a \ll M_{rn}$

Card 1/4

SOV/56-35-3-23/61

The Dependence of Cross Sections on Energy Near the Threshold for the Reaction of Multiple Production

Chapter II deals with the charged particles; if the Coulomb interaction of particles among one another is neglected, the amplitude function is as follows:

$$F(\vec{k}_1 \dots \vec{k}_N) = \int \prod_{\alpha=1}^N \Psi^*(\vec{k}_\alpha, \vec{r}_\alpha) U(r, q) \Psi(r, q) \varphi_{\text{nucl}}(q) dr dq$$

($U(r, q)$ is the entire interaction energy between emitted particles and the nucleus, $\Psi(r, q)$ = the exact wave function, and $\varphi_{\text{nucl}}(q)$ describes the final state of the nucleus. \vec{r}_α and \vec{k}_α are the coordinates and momenta of the particles).

In conclusion, the author thanks Professor I. Ya. Pomeranchuk for formulating the problem and discussing it.

Bremsstrahlung of π -Mesons in Interaction With Nuclei SOV/56-35-4-8/52

of the Laboratoriya yadernykh problem Ob'yedinenogo instituta yadernykh issledovaniy (Laboratory for Nuclear Problems of the United Institute for Nuclear Research). The authors used a bubble chamber with a Freon mixture ($CClF_2+CClF_3$). The γ -quanta of the bremsstrahlung were observed by means of the conversion effect on electron-positron pairs. (In this connection compare also the papers worked out by the authors in cooperation with Blinov and Shchegolev) (Refs 5, 6). Energy- and cross section measurements are here carried out for pion nuclear force bremsstrahlung in the energy range of $80 < E_{\pi^+} < 300$ MeV on C-, F-, Cl-nuclei, and results are compared with theoretical results. For the inelastic pion scattering on nuclei (processes

$$\pi^+ + A \rightarrow \pi^+ + \gamma + A' \text{ and } \pi^+ + A \rightarrow \pi^+ + \pi^0 + A'$$

where A and A' denote the initial- and final states of the nucleus respectively) and the same elastic processes, 20 cases of such a pion bremsstrahlung were found on 7000 plates (elastic + inelastic), and a cross section (on F-nuclei) of $(4.5^{+1.2}_{-0.2}) \cdot 10^{-27} \text{ cm}^2$ was determined. Among these 7000 pictures

In investigations of reactions near threshold it is generally assumed that the end products are in the s-state because the contribution made by the orbital momenta which are different from zero is negligible. If homogeneous fermions of spin $\frac{1}{2}$ are among the end products $N > 2\sigma + 1$, this can no longer be assumed. The wave functions obeying the Pauli principle may, near the threshold, in this case contain orbital momenta that are different from zero. Taking the Pauli principle into account leads to the occurrence of angular correlations and to a variation of the energy dependence of cross sections near the threshold. For uncharged products the limiting angular correlations may, in certain cases, be calculated independently of a concrete reaction mechanism. This is the case e.g. if, because of the difference in energy dependence of the

Reactions of Multiple Production

SOV/56-3645-27/76

contributions on the threshold, there is only one channel with determined symmetry. An analogous investigation for charged products requires additional knowledge of the reaction mechanism. The author in the present paper calculates the limiting angular correlations for reactions in the final state of which an infinitely heavy nucleus N emits uncharged fermions ($\text{spin } 1/2$) if $N = 2, 3, 4$. In this case the channel with the determined symmetry corresponds to a total spin S . First, general formulas are written down for the reaction amplitude in dependence on the momentum of the departing particles and for the spin function. Several special cases are then investigated: 1) $N = 2$; the amount on the threshold gives only one channel with $S = 0$. 2) $N = 3$; the reaction develops in the channel $S = 1/2$. 3) $N = 4$; the channels with $S = 0$ and $S = 1$ have the same energy dependence $\sigma_4 \sim E^7$. For a) $S = 0$ and b) $S = 1$ the spin- and coordinate basis functions, the matrix elements, as well as the amplitude- and correlation functions

are written down. The results obtained are finally discussed
in short. There are 8 references, 4 of which are Soviet.

TITLE: Scattering of a Nucleon on a Nucleon With High Orbital Momenta
(Rasseyaniye nuklona na nuklone s bol'shimi orbital'nymi momen-tami)

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, 1959,
Vol 36, Nr 6, pp 1717 - 1724 (USSR)

ABSTRACT: Okun' and Pomeranchuk have already shown (Ref 1) that, in view of the fact that in peripheral particle interaction only a minimal number of pions is exchanged, processes in high orbital momentum states may be dealt with by means of the modern meson theory. The author of the present paper carries out a detailed investigation of the properties of the one-pion exchange approximation of elastic nucleon-nucleon scattering. In the case of a sufficiently large l , the assumption that only one pion is exchanged in interaction is justified (the contribution of diagrams with two exchange pions has already been investigated by Galanin, Grashin, Ioffe, and Pomeranchuk). Proceeding from the amplitude equation of nucleon-nucleon scattering written down in one-pion approximation

with pseudoscalar symmetric nucleon-nucleon interaction; conditions are discussed and expressions for the scattering operator and the elements of the scattering matrix are derived. Formulas are derived for the scattering phase shifts, and the latter are calculated (of tables 1 and 2). The author suggests a new method of analyzing phase shift, which was to reduce the multiplicity of the solution and would make it possible more easily to obtain the experimental phase shifts. The author finally thanks L. B. Okun', I. Ya. Pomeranchuk, and Ya. A. Smorodinskiy for discussions and valuable advice. There are 2 tables and 10 references, 3 of which are Soviet.

TITLE: Collision of Nucleons with Large Orbital Momenta

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki,
1959, Vol 37, Nr 6, pp 1663-1679 (USSR)

ABSTRACT: A method of calculation was developed for that part
of the nucleon-nucleon scattering amplitude for large
orbital momenta $\ell \gg 1$ which is due to the exchange
between two mesons. The connection between this
amplitude and the scattering of real mesons by nucleons
was established with the aid of the dispersion equations.
The method is valid when, besides the condition $\ell \gg 1$,
the inequality $\ell \mu / p \gg 1$ is also satisfied (here, μ
is mass of π -meson; p is momentum of nucleon in the
center mass system). The second assumption has a
physical meaning: the quasi-classical parameter

$r_o = l \xi / \mu \gg 1/\mu$, i.e., it is the condition of the collision periphery. In words, the classification of interactions according to their "degree of periphery" with a small expansion parameter has meaning only when the above condition is satisfied. The main part of the asymptotic expansion parameter for the two-meson phases can be obtained by this method from the small parameter $l/L(l \xi)$, which at low energies ($\xi^2 \gg 1$) is $1/l$, and with an increase in the energy increases up to $1/l \xi$ (when $\xi^2 \ll 1$). The principle of the derivation was that under the above assumption of the virtual meson exchange between nucleons, the main role is played by mesons with physical relation between the energy and the momentum ($\omega^2 - k^2 = \mu^2$), but with nonphysical relation between energy $\omega = 0$ transferred by the momentum $q^2 = 4\mu^2$. Concrete examples of the calculation of two-meson phases and their comparison with the one-meson phases will be reported
