

GAJDA, J.

1964. INVESTIGATION OF THE EFFECT OF SIZING AND STAMPING OF THE CHARGE ON THE QUALITY OF COKE WHEN USING HEAVY CARBON COALS. By Gajda, J. and Gackiewicz, H. (Koks, smoła, gąbka, tlen, gaz, stopniowanie, tot. 460, 1964, vol. 1, 141-143). It was found that strength and abrasion of coke increased with decrease in size in mixtures of type III coals. A comparison is made between results obtained with stamping of the coke over charge and without. (L).

TITLE : Standardization of Methods for the Control of Color Fastness of Textile Products and Dyes
ORIG. PUB. : Normalizacja, 1958, 26, No 11, 532-537
ABSTRACT : A historical review of the work of Polish and foreign organizations on standardization of methods for the control of color fastness of dyeings and dyes. Modern methods are simpler and more accurate. A complete list of all mandatory control methods is given. Equipment and reagents necessary in applying these methods are described, and the sources of supply, in Poland, are stated. The proposed trends of further improvement of the methods are discussed in accordance with plans of the International Organization of Standards (ISO). Bibliography & references.

TITLE: Automatic feed equipment for the linearization of dependence CZ Pat. No.
PV 6632-63

SOURCE: Vynalezy, no. 1, 1966, 20

TOPIC TAGS: feed mechanism, feeding technique, linear automatic control, linear function, linear programming

ABSTRACT: Automatic feeds equipments for the linearization of dependence:

namely single purpose, working on the basis of the transformation of given functions in the form

so that the interval

Card 1/3

ACC NR: AP6005499

is determined by the relationship

$$A^{n+1,s} = \sum_{i=0}^{k-1} \frac{a_i}{k+i} + \sum_{s=0}^{k-1} (-1)^s \cdot \frac{a_0}{s} \cdot \frac{a_1}{(k-s-1)^{k-1}}$$

in which A is a positive number, t it a transformed independent or a polynomial of the first stage of other transformed independents

$$t = a_0 t - a_1$$

with positive coefficients a_0, a_1 , the root k is a natural number larger than 1 and the interval

$$s A^k = t$$

is predetermined so that

$$\frac{a_1}{A^k}$$

will be a whole number, consisting of the source of the impulses, of the dividing branches, and of the power device, which executes the required act, characterized by the fact that the source of the regular impulses is across direct contacts of the comparing devices of the dividing branches of the linearization equipment

Card 2/3

ACC NR: AP6005499

connected with the input of the power device and across these contacts it is connected with the clearing contacts of the summation devices of the individual dividing branches and simultaneously it is connected across the memory contact of the other dividing branch with the memory device of the other dividing branch and across this contact and, across the memory contact of the third dividing branch, it is connected with the memory device of the third dividing branch and in an analogous manner it is connected across the memory contacts with the memory devices of other dividing branches, in which between the direct contacts of the second and contacts of the third dividing branch of the comparing devices is attached, across the dividing contact of the comparing device, next through the divider and the summation device, the input of the comparing device of the second dividing device, whose second input is connected with the output of the memory device of the second dividing branch, in which the circuit can continue analogously for the third and on up to the k^{th} dividing branch. The two points of the subject of the patent will follow.

ORG: Laboratory for Induced Electron Emission, Institute of Experimental Physics,
Wroclaw University (Zaklad Wzbudzonej Emisji Elektronow przy Katedrze Fizyki
Doswiadczonej, Uniwersytet Wroclawski)

TITLE: Effect of oxide and of measuring parameters on the decay of photostimulated
(exo)electron emission in vacuum from plastically deformed aluminum (I)

SOURCE: Acta physica polonica, v. 28, no. 3, 1965, 329-335

TOPIC TAGS: plastic deformation, deformation rate, aluminum, electron emission,
oxide, electric field, space charge

ABSTRACT: The process of decay of photostimulated exoelectron emission in vacuum,
as measured subsequent to plastic deformation (distortion) of aluminum, is con-
sidered. The tangent to the emission decay curve $\log N/t(t)$ at points near
 $t = 0$ is shown to depend on such factors as: a) the thickness of the oxide layer
D, b) the external electric field E accelerating electrons, c) the intensity I of
light stimulating emission, d) the procedure applied in preparing the samples.
The value of the tangent (steepness) of the curve $N/t(t)$ in the point $t = 0$ is
considered as a quantity characterizing the rate of decay of emission. It is found
that the rate of decay of emission depends on factors opposing the outflow of

Card 1/2

L 21295-66

ACC NR: AP5024614

electrons from the metal-oxide substratum to the space beyond the chinks which arise in the oxide layer coating the aluminum sample in the process of the latter's distention. The hypothesis is proposed that exoelectron emission is controlled by the space charge due to electrons unable to proceed outward of the chink. Orig. art. has: 7 figures and 4 formulas. "On the Methemoglobinemia of Sheep."

Budapest, Magyar Allatorvosok Lapja, Vol 21, No 2, Feb 66, pages 64-67.

Abstract: [Authors' English summary modified] A few cases of methemoglobinemia in sheep are reported. In 1963-64, the disease was diagnosed on 6 occasions in 20 carcasses. Losses caused by emergency slaughter amounted to 114 animals, 5.7 per cent of the affected stocks. On 3 occasion, the disease was caused by the ingestion of nitrate fertilizers; in other cases, water was drunk by the animals which contained nitrate or nitrite. The diagnosis is established on the basis of the anamnesis, clinical symptoms and the observation of pathological changes. Laboratory tests such as the nitrate content of the food in the rumen and of the blood and the blood methemoglobin level are also useful. To prevent the condition, animals must be kept away from such chemicals. Treatment consists of i.v. injection of 0.01-0.02 g/kg of methylene blue dissolved in water. The results of this treatment are reliable. 7 Eastern European, 29 Western references.

"The Incidence of Mastitis in Cattle Caused by Pseudomonas Aeruginosa (Bact. Pyocyanneum)."

Budapest, Magyar Allatorvosok Lapja, Vol 21, No 7, Jul 66, pages 314-316.

Abstract: [Author's English summary modified] The mass occurrence of parenchymatous mastitis at a large dairy farm was observed by the author. Pseudomonas aeruginosa was isolated in pure cultures from the udder excretion of 19 clinically affected animals. An additional 34 strains of this organism were isolated from the milk samples of 34 animals free of symptoms. The water used for washing of the udders was found to be the source of the infection. The isolated strains had uniform biological properties but they could be classified into several groups on the basis of their serological and pathogenetic properties. Investigations in this direction are still incomplete. The cows with clinical symptoms could not be completely cured by medication but chronic forms with abscess formation developed. However, systematic antibiotic treatment of latent infections gave satisfactory results. The results serve as confirmation of certain literature statements according to which Pseudomonas mastitis can develop as a result of neglected hygienic conditions. 8 Hungarian, 13 Western references.

Title : The Conditions for Optimum Pre-Hydrolysis of Beech Sulfate Cellulose.

Orig Pub : Papir a cellulosa, 1958, 13, No 5, 97-100.

Abstract : The results of experiments conducted to determine the influence of a different degree of the pre-hydrolysis (PH) upon indices of unbleached beech cellulose (C) prepared by the sulfate method are cited. The evaluation of the PH degree was done by the loss in weight of the wood pulp resulting from PH. In a PH with a 12% weight loss in wood pulp, an unstable viscose C is obtained. A viscose C of a tenacity is obtained by a PH with a loss of 18-19% in the

✓ Kinetics of heat of inactivation of ribonuclease. B. Gajewska and D. Shugar (State Inst. Hyg., Warsaw). "Bull. Akad. Polon. sci. Classe II," 3, 117-21 (1955) (in English).— This investigation of the kinetics and the effect of ions on heat inactivation of ribonuclease was undertaken because this enzyme is similar in mol. wt., thermostability, and structure to lysozyme (C.A. 48, 8332b). For these expts. a cryst. Worthington prepn. was used. The solns. of the enzyme were heated in flasks immersed in an oil bath at the desired temp. and the remaining activity detd. by a previously developed method (C.A. 48, 11818a). At pH 7.0, temp. of 60-90°, and enzyme concn. of approx. 1 mg./ml., the reaction was approx. 1st order. At concns. of 0.01-0.04 mg./ml. there was no uniformity in the order of the reaction. By using the initial reaction rate for the lower enzyme concn. and the approx. 1st order rate const. for the higher concn., activation energies were calcd.: 23 cal./mole at 0.04 mg./ml., 25 cal./mole at 0.1 mg./ml., 18 cal./mole at 0.8 mg./ml., and 33 cal./mole at 0.9 mg./mole, all at pH 7.8. For the latter concns. which were approx. 1st order reactions, $\Delta F = 26$ cal./mole and $\Delta S = 19$. Significance of the calcs. were not clear since the results indicated that the reaction was not monomol. and ribonuclease has been chromatographically sepd. into more than one component (C.A. 47, 8139a). The calcd. values suggested that no extensive unfolding of the ribonuclease mol. was involved in heat inactivation. In borate buffer pH 8.4 and at concn. of $10^{-4}M$, Co^{2+} , Zn^{2+} , Mg^{2+} , Li^{+} , Cu^{2+} , and Al^{3+} showed a stabilizing effect on ribonuclease. At alk. pH Mn^{2+} ($10^{-4}M$) showed the most protective effect, which was negligible at acid pH. In presence of acetate buffers, loss of activity without heating sometimes occurred although citrate buffers at the same pH showed no such anomalous reaction.

The addition of pepsin, egg albumin, lysozyme (in concentrations of 1.0 mg./ml.) and trypsin (0.1 mg./ml.) to a solution of ribonuclease (20 mg./ml.) increased the rate of heat inactivation of the enzyme, while reducing the reaction order from above 3 to approximately 1st order. Insulin and protamine had no such effect. It is suggested that an intermolecular reaction takes place between ribonuclease and specific foreign proteins.

"Severe Hematuria in Pregnancy. Case Report"

Warsaw, Polski Tygodnik Lekarski, Vol XVIII, No 8, 18 Feb 1965, pp 303-305

Abstract: /Author's English summary modified/ Severe hematuria and hydronephrosis in a pregnant woman are reported. Attention is drawn to this complication and to the treatment of secondary anemia. Hematuria is the only sign characteristic of this disease. The disease occurs seldom, in the case reported hematuria was severe, lasted for a long period and disappeared spontaneously after delivery. 2 illustrations; 5 references, 2 Polish, 3 Western.

AUTHOR: Gajewski, Dionizy, Engineer

TITLE: Needs of the National Economy Require Progress in
Scientific and Technical Information

PERIODICAL: Przegląd Techniczny , 1960, Nr 13, pp 2-4

ABSTRACT: This article deals with the need, development, and organization of a scientific and technical information service in Poland. The author points out that research work on a scientific and technical information service conducted in the USSR and Western countries is considerably advanced as compared with Poland. The Soviet information publication "Referativnyy Zhurnal" periodical foresees publication of 119,000 articles and other publications in the field of chemistry in 1960. The first Polish project on the organization of a scientific, technical, and economic information service was worked

and Technical Information

out in October-November 1958. This project was discussed at the National Meeting of the Bibliotekarze Bibliotek Fachowych i Dokumentaliści (Librarians of Technical Libraries and Documentarians) held at the Dom Technika (Technician's House) in Warsaw. By order of the Rada do Spraw Technicznych (Council for Technical Matters), many projects on this subject were worked out by a team of librarians and documentarians appointed by the Stowarzyszenie Bibliotekarzy Polskich (Polish Librarian's Association) during the following 1 1/2 years (after 1958). Finally, a definite project based on new directives was worked out by the Urząd Rady Ministrów (Council of Ministers Office). Problems of a scientific and technical information service were already discussed at the 3rd Kongres Inżynierów

i Techników Polskich (Congress of Polish Engineers and Technicians), and in the "Przegląd Techniczny" periodical. Resolutions passed at the 4th Plenum KC PZPR (Central Committee of the Polish United Workers Party) require the NOT (Main Technical Organization), and scientific and technical associations to work out a considerably developed activity program in this field. The activity plan of the Komisja Biblioteczna NOT (Library Commission NOT) for 1960 endeavors to initiate an increased interest of engineers and technicians in scientific and technical matters. The fundamental organizational concept of information service activities is the principle of a centrally coordinated de-centralized system. A similar principle has been introduced in the GDR, and partly in the USSR and CSR. In conjunc-

tion with the extension of the activity scope in the information service, the author suggests changing the name of the CIDNT, Centralny Instytut Dokumentacji Naukowo-Technicznej (Central Institute of Scientific and Technical Documentation) to CIINTE, Centralny Instytut Informacji Naukowo-Technicznej i Ekonomicznej (Central Institute of Scientific, Technical, and Economic Information). The CIINTE will have the following tasks: a) conduct scientific research on the theory of methodology and technique of information activities, b) management of a Centralna Biblioteka Techniczna (Central Technical Library), c) expert supervision and conduct of methodological instructions, proper coordination of local technical and economic information network activities, d) carry out inspections of information center activities over
