2371. THE ROLE OF HISTAMINE LIBERATION IN THE DEVELOPMENT AND PROGRESSION OF CINCHOPHEN ULCER - Hámori A., Scossa K. and Hetényi G. 1st Dept. of Med., Univ. Med. Sch., Szeged - ACTA MED. ACAD. SCIENT. HUNG. (Budapest) 1957, 10/4 (375-396) Illus. 21

Lesions of the stomach and duodenum produced by starch embolism, food, cinchophen damage to the mucosa and surgical operation were subjected to the Indian ink test. The formation of carbon deposits around cinchophen ulcers was specific and excessive in comparison with the effect of other lesions. It is believed that histamine plays the role of a mediator in the development and progression of cinchophen ulcer. The results suggest that the last link in ulcer disease is due to local histamine poisoning.

Experimental glomerulonephritis. Ajlur, Hamori and Ferenc Olah (Szegei Univ., Hung.) *Lancet* 761, 280-7 (1951).—Ducks were immunized with intraperitoneal administration of antigen prepd. from rabbit stomach and rabbits were injected intravenously with the serum thus obtained. A pathol. process ensued which clinically and

histologically resembled acute and subacute glomerulonephritis in man. It is believed that the glomerulonephritis is a specific process, the pathogenesis of which is in an antigen-antibody reaction. The rabbit stomach is considered to contain heterotopic antigens, identical with those in the glomeruli. In the duck these heterotopic antigens evoke specific nephrotoxic antibodies. Barbara R. Murray

Effect of vagus exclusion on the atophan (cinchophen) ulcer of dogs Artur Hamori, Károlyi Szócska, and Géza Hetenyi (Univ. Sargent, Hung.; *Acta Med. Acad. Sci. Hung.* 1, 120-30, 1963) in English. Atophan ulcer of dogs caused by injecting intravenously 0.10 g/kg % atophan for 3 weeks in the form of a 5% soln. were definitely aggravated by vagus resection. Similar results were obtained with toxic doses of atropine. Vagus resection alone may cause gastric ulcers but may have some effect in preventing duodenal ulcers. This suggests that the origin of gastric and duodenal ulcers is not identical. Vagi seem to play a role in safeguarding the defensive mechanism against gastric ulcers. 14 references. Istvan Fonyó

HAMORI, A.

Influence of high temperature on central regulation of respiration.
A. Hamori (Mitsui Eng. Arch. 1935) The respiratory centre in the medulla oblongata is not only inhibited by heat, but also by the medullary centre located in the medulla oblongata. Respiratory movements are regulated by (i) the medullary centre which is primarily sensitive to heat, (ii) the centre in the medulla oblongata which is most sensitive to heat, (iii) panting, and (iv) the reflex respiratory movements elicited by heat. Periodic breathing may occur when the higher centres are eliminated by heat paralysis, when competition between the pontobulbar inhibitory centre and the medullary centre occurs.

HAMMES P

V Preparation of some imino- and cyanimino-substituted barbiturates. D. M. Dvornik, S. M. Djokic, and P. Hammes (1954) (in English).—Condensations of substituted esters (I) of $\text{CH}_2(\text{CO}_2\text{H})_2$ and $\text{NCCH}_2\text{CO}_2\text{H}$ with urea, $(\text{H}_2\text{N})_2\text{C}=\text{NH}\cdot\text{HNO}$, (II) and $\text{H}_2\text{NC}(\text{NH})\text{NHCN}$ (III) were effected by gradually adding MeONa to the reaction mixt. The resulting substituted imino and cyanimino barbituric acids (IV) were hydrolyzed to the corresponding barbituric acids. General procedure: A soln. of MeONa (from 0.22 g.-atom Na) in 100 ml. MeOH was gradually added to a boiling suspension of 0.1 mole I and 0.15 mole urea, resp. III, during 6-8 hrs., refluxed 3 hrs., evapd. to dryness, dissolved in 150 ml. H_2O , extd. with 40 ml. Et_2O and decolorized. After acidification with 15% HCl under cooling and stirring, the ppt. was filtered off and washed with H_2O . The hydrolysis was effected by boiling 0.1 mole IV 7-18 hrs. with 13 ml. 25% H_2SO_4 . II (1.5 mole) was used per mole of I, and the MeONa soln. was prepd. from 3.15 g.-atom Na in corresponding excess of MeOH . The following IV were prepd. (substituents given): 5-(1-cyclohexen-1-yl)-5-methyl-4-imino, m. 247-54° (decompn.) (melting points detd. on Kofler micro app. unless otherwise stated), 68.4% yield; 5-(1-cyclohexen-1-yl)-5-ethyl-4-imino, m. 269-62° (decompn.), 61.7% yield; 5-(1-

cyclohexen-1-yl)-5-methyl-2,4-dilimino, m. 246-63° (decompn.), 79.4% yield; 5-(1-cyclohexen-1-yl)-5-ethyl-2,4-dilimino, m. 248-63° (decompn.), 89% yield; 5-phenyl-2-imino, m. 333-6° (decompn.), 86% yield; 5-phenyl-5-methyl-2-imino, m. over 360° (decompn.) (uncorr.), 88% yield; 5-phenyl-5-ethyl-2-imino, m. 313-15° (decompn.), 93.5% yield; 5-(1-cyclohexen-1-yl)-5-methyl-1-cyano-2,4-dilimino, m. 268-72° (decompn.), 85.6% yield; 5-(1-cyclohexen-1-yl)-5-ethyl-2,4-dilimino, m. 263-8° (decompn.), 87% yield; 5-phenyl-1-cyano-2-imino, m. 280-93° (decompn. from 289°), 79.5% yield; 5-phenyl-5-methyl-1-cyano-2-imino, m. 236-41° (decompn.), 89.5% yield; 5-phenyl-5-ethyl-1-cyano-2-imino, m. 220-5° (decompn.), 86% yield. By hydrolysis, the following barbituric acids were prepd. (yields not stated): 5-(1-cyclohexen-1-yl)-5-methyl, m. 205-10° (uncorr.); 5-(1-cyclohexen-1-yl)-5-ethyl, m. 175-6° (uncorr.); 5-phenyl, m. 250° (decompn.); 5-phenyl-5-methyl, m. 228°; 4-phenyl-5-ethyl, m. 177° (uncorr.). HALMOS, PAUL R.

Mathematical Reviews
 Vol. 14 No. 11
 Dec. 1953
 Analysis

✓ Halmos, Paul R. Spectra and spectral manifolds. Ann. Soc. Polon. Math. 25 (1952), 43-49 (1953).

Let A be a bounded normal operator on a Hilbert space \mathcal{H} , let \mathcal{Y} be a closed invariant subspace of \mathcal{H} , and let B be the restriction of A to \mathcal{Y} . Let $A(\mathcal{Y})$ consist of those complex numbers λ for which $B - \lambda$ is not invertible. A reducing subspace is an invariant subspace whose ortho-complement is also invariant. Since the intersection of every set of reducing subspaces is a reducing subspace there is a unique minimal reducing subspace \mathcal{M} containing a given invariant subspace \mathcal{Y} . It is shown that $A(\mathcal{M}) \subset A(\mathcal{Y})$. It is also shown that for Borel sets M in the complex plane the closed linear manifold spanned by all invariant subspaces \mathcal{X} for which $A(\mathcal{X}) \subset M$ is the same as the closed linear manifold spanned by all reducing subspaces \mathcal{X} for which $A(\mathcal{X}) \subset M$. — *N. Dunford.*

Halmos, Paul R.

(Halmos, Paul R.) Commutativity and spectral properties of bounded operators. Acta Sci. Math. Szeged. 2, Leopoldo Figini et Brattico Ricca LXX annoa natae dedicatus, Pars B, 133-156 (1950).

The author proves for the case of a bounded normal operator A in Hilbert space the fact that if the bounded operator B commutes with A , then B commutes with the adjoint A^* of A . The proof given here differs from the one given by B. Fogelson [Proc. Nat. Acad. Sci. U. S. A. 36, 35-40 (1950); those Rev. 11, 371] whose method yields the result for arbitrary normal A and a bounded B . (The author remarks that a minor modification of his method will cover the general case.) The key to the proof is the following theorem which seems to be new. For a bounded normal operator A let $\mathcal{F}(x) = \{x \mid \|Ax\| = \|x\|\}$. For every complex number λ and every $\epsilon > 0$ let $\mathcal{F}(\lambda, \epsilon) = \mathcal{F}((A - \lambda)/\epsilon)$. For every set M of complex numbers let $\mathcal{F}(M, \epsilon)$ be the subspace spanned by all $\mathcal{F}(\lambda, \epsilon)$ with λ in M . Let $\mathcal{F}(M) = \bigcap_{\epsilon} \mathcal{F}(M, \epsilon)$, and let $E(x)$ be the resolution of the identity for A ; $A = \int \lambda dE(x)$. Then if $\mathcal{G}(M) = \{x \mid \int M dE(x) \cdot x = x\}$, it follows that, for every compact set M , $\mathcal{G}(M) = \mathcal{F}(M)$. This result is based on the "regularity" of the spectral measure $E(M) = \int M dE(x)$. *B. Gabaum (Minneapolis, Minn.).*

TITLE: Glow-tube pulse generator

B

SOURCE: Sdelovaci tehnika, no. 10, 1964, 370

TOPIC TMS: pulse generator

ABSTRACT: Described is a simple glow-tube circuit generating very short pulses with a high transconductance, derived from a power supply of a voltage with a sinusoidal course. The circuit operates at low frequencies and generates pulses of both polarities with the possibility of changing their phases. Orig. art. has: 3 figures, 1 graph.

✓ Changes in the pattern of the bone marrow reticulum cells and of the serum proteins in infectious (epidemic) hepatitis. I. Strausz and S. Hammer (Szabole Street State Hosp., Budapest). *Acta Med. Acad. Sci. Hung.* 9, 221-9 (1958) (in English).—In infectious hepatitis, the most const. change in bone marrow pattern was an increase in the no. of plasmocytes and normoblasts. In most cases, the serum globulin level (I), thymol turbidity values (II), and formol-gel values (III) increased in proportion to the increase in plasmocyte count (IV). Changes in I, II, III, and IV generally were parallel.

Title : Placart - A New Packing Material.

Orig Pub : Ind. lemn., 1957, No 3, 104-106

Abstract : The manufacture of placart is described. Placart consists of more or less thin sheets of wood of various tree kinds covered on both sides with packing paper, to which a layer of waterproof substances 0.2 to 0.4 mm thick is applied. The sheet sizes are 2500 to 3500 mm by 1200 mm by 1.5 to 4 mm (mainly 2.5 mm). 1 sq. m of 3 mm sheet thickness weighs 700 g, and 1 sq.m of 5 mm thickness weighs 800 g. It is used for packing and furniture making.

TITLE: On transportation problems. 4. On a method of solving the transportation problem

PERIODICAL: Referativnyy zhurnal, Matematika, no. 7, 1962, 61, abstract 7V289. ("Comun. Acad. RPR", 1961, 11, no. 9, 1047-1049)

TEXT: This is a continuation of the series of articles by the authors on the transportation problem (for the first article cf. Rzh. Mat., 1962, 2V452; the second and third articles are being printed). The method of solution suggested is based on the interpretation of the transportation problem as a parameter problem of linear programming. The optimal solution of the original problem are obtained for certain parameter values. A short example is given.

Schefferian algebras

5/044/62/000/002/002/092
C111/C333

The composition law $\bar{\top}$ is denoted as the first Scheffer function. The relations (1) - (6) are understood as a system of axioms, the completeness and independence of which are proved. The properties of the function $\bar{\top}$ are investigated. The second Scheffer function \perp is defined in the Schefferian algebra by the relation

$$\perp(a_1, \dots, a_n) = \bar{\top}(\bar{\top}(a_1, \dots, a_n))$$

the properties of \perp are investigated. The duality principle is proved: Each theorem of the Schefferian algebra remains correct, if the functions $\bar{\top}$ and \perp and the constants 0 and 1 are interchanged. The author finds distributive laws which are satisfied by the Schefferian functions. It is shown that each element of a Schefferian algebra is representable in a conjunctive or disjunctive normal form. Some theorems on the connection between the Schefferian and the Boolean algebra are proved.

Title : A Direct Effect of Noradrenaline on Cardiac Contractions.

Orig Pub : Casop lekaru ceskyh, 1957, 96, No 12, 364-368

Abstract : In experiments on dogs an intravenous or intracoronary injection of noradrenaline caused an increased emptying of the left ventricle as expressed by an elevation in arterial pressure and decreased pressure in the left atrium; the pressure in the right atrium either remained unchanged or diminished slightly. The change in cardiac contractions was manifested by a shortened isometric phase. During intracoronary injections the systole in portions of the myocardium that contained noradrenaline became shorter; this indicated a positive inotropic effect of noradrenaline upon the myocardium.

greatly on the mode exhibited by the laser. It was concluded that the laser beam was "almost coherent" throughout its entire cross section and that a greater degree of coherence can be obtained for some modes. Comparison of the flux-density of a black-body radiation W_s and the flux-density of an "almost coherent" radiation beam W_p shows that $W_p = (0.16 \lambda)^2 W_s$. For a laser beam at $\lambda = 6328 \text{ \AA}$ the ratio W_p/W_s is more than 10^{10} times greater than for black-body radiation. Orig. art. has: [JA]

TITLE: Spatial coherence measurement of gas laser output

SOURCE: Acta physica polonica, v. 29, no. 6, 1966, 753-757

TOPIC TAGS: ~~laser~~, gas laser, laser beam, laser emission coherence

ABSTRACT: An investigation was made of the spatial coherence of an He-Ne laser beam. Measurements were made of the output radiation of a cw He-Ne gas laser operating at 6328 Å. The laser consisted of a quartz discharge tube 995 mm long filled with He at 0.5 mm Hg and Ne at 0.1 mm Hg. The tube, which was terminated with optical flats oriented at Brewster's angle, was made of high-optical-quality synthetic fused silica. The tube was placed between two external confocal spherical reflectors mounted 111.4 cm apart. The reflectors, which consisted of vapor-deposited dielectric layers, had reflection coefficients of 98.7 and 99.3%. Interference patterns for pin-holes spaced 1, 2, and 3 mm apart and the intensity distribution of interference fringes were obtained. Analysis of the interference patterns showed, in principle, that the degree of coherence of the laser radiation varied in different parts of the laser beam and greatly decreased in the direction opposite to the geometrical axis of the beam. The degree of coherence of the laser beam depends
