Phosphatases of the Brain Under Normal Conditions  
and in Disorders of Circulation

Orig Pub : Bul. stiint. Sec. med., 1956, 8, No 2, 433-444

Abstract : The alkaline phosphatase (AP), investigated by the method  
of Gomori and Dorfman-Epstein, is demonstrated normally  
in the cortex of the brain of rabbits in the nucleus  
(in the nucleolus, in the chromatin net and in the  
nuclear envelope) and in the intercellular matter. The  
greatest quantity of AP is contained in the III, IV and V  
layers of the cortex. In cats a markedly manifested

reaction to AP is noted in the wall of the blood vessels. As a result of ischemia, produced by ligature of the carotid arteries for 30 - 60 minutes, the quantity of AP of the cerebral cortex of rabbits changed according to the current functional condition of the vessels; the activity of AP increased in dilatation, decreased in vaso-constriction. The AP activity fell or disappeared completely in the areas of the brain; submitted to compression, it increased in the adjacent areas, and did not vary in the hypothalamus. -- S. N. Fayn

Title : Cerebral Vascular Innervation. On the Question  
of the Existence of Cerebral Vascular Reflexogenous-  
ous Zones. Communication I. Cerebral Innervation  
of the Arteries Located Outside the Cerebral Trunk.

Orig Pub: Studii si cercetari neurol. Acad. RPR. Inst.  
neurol., 1957, 2, No 1, 15-24.

Abstract: By the argentation method, a study was made of  
the nerve apparatus in the walls of the artery of  
the Willis circle. It has been discovered that  
it consists of four nerve plexuses located within  
the adventitia on the border between the outer and  
the muscular coat, as well as in its thickness.

Card 1/2

RUMANIA / Human and Animal Morphology. Nervous System. S-2  
Peripheral Nervous System.

Abs Jour: Ref Zhur-Biol., No 14, 1958, 64767.

Abstract: Nerve mechanisms of the receptor type of the (glomerular corpuscle, tree-like receptors) were found, and in the muscular coat - tract-like receptors consisting of fibers which spiral around the elastic and muscle fibers. The largest number of receptors were found in the Willis circle and at the initial part of the arterial trunks of the base of the skull. This would argue the presence of vascular reflexogenous zones in this area.

Prague, Ceskoslovenska Farmacie, Vol 15, No 5, Jun 66, pp 225-228

Abstract /Author's English summary modified/7: Propellants of aerosol pharmaceutical preparations were analyzed by means of adsorption gas chromatography, with detectors based on volume measurements according to Janak. The column was packed with silica gel size 0.2-0.4 mm, CO<sub>2</sub> was used as gas carrier. 3.0 ml of gas was used; an analysis takes 30 minutes. The results obtained are in vol%. 2 Figures, 2 Tables, 1 Western, 4 Czech references. (Manuscript received 1 Oct 65).

Title : Kinetic changes in the Trachea and Larynx in  
Rapid Expiration..

Orig Pub: Ceskosl. fysiol., 1958, 5, № 3, 324-327.

Abstract: In the subjunctional portion of the trachea and  
at the level of the aortic arch, the authors  
noted, on expiration, a displacement of the  
posterior wall of the trachea and a narrowing  
of its lumen. At the clavicular level there  
was a backwards displacement of the posterior  
wall of the trachea and a widening of the lumen.

5582. THE BIOCHEMICAL CHANGES AS SHOWN BY BIOPSY AND AUTOPSY IN  
A CLINICALLY DIAGNOSED CASE OF WERDNING-HOFFMAN'S DISEASE -  
Zestawienie zmien biochemicznych z bio- i autopsja w przypadku klinicznie  
rozpoznannej choroby Werdniga-Hoffmanna - Czap Z. and Hornik N.  
Klin. Chor. Dzieci, Krakow Zakl. Anat. Patol. Akad. Med., Krakow -  
PRZEGL. LEK, 1958, 14/6 (177-181 and 182) Illus. 4

The case described is that of a 3-year-old boy, who developed normally after birth. When he was 9 months old, he began to exhibit a gradual weakening in muscular strength. Not long afterwards, muscular atrophy was observed, beginning in the trunk, the shoulder girdle and the pelvis. The case was diagnosed as Werdnig-Hoffman's disease with the following deviations from the typical picture: (1) the absence of similar cases in the family; (2) the presence of generalized muscular flaccidity; and (3) the lack of progression in the final phase. After 4 months, the child died of bronchopneumonia. The creatine, phosphoro-calcium and amino-acid balances were examined in particular. A considerable increase in the excretion of creatinine and especially of creatine in the urine and a constant, raised phosphate acid level in the blood were observed. Similar changes are seen in the paralytic forms of poliomyelitis. As a result of treatment with tocopherol, vit. B<sub>1</sub> and glucocort, the ratio of creatine to creatinine in the urine was raised. The serum calcium was normal. The excretion of amino-acids by the kidneys was shown to be normal by bi-dimensional paper chromatography. A biopsy was made of the muscles and later compared with the postmortem examination. The picture of the muscles was similar to that described in Werdnig-Hoffmann's and Oppenheim's diseases, consisting in atrophy of some muscle fibres, besides which normal or even hypertrophied fibres were met with, although in negligible quantities. Atrophy and degeneration of the motor cells of the spine and subcortical nuclei were shown.

Title : Allergic Reactions to Irgapyrin.

Orig Pub : Ceskosl. dermatol., 1956, 31, No 2, 72-77.

Abstract : These are two cases of severe secondary reactions following the administration of irgapyrin. The first patient had erythroderma that transformed into recurrent eczema and urticarial eruptions lasting for several years after the administration of various drugs and mechanical irritation. Such a condition of the patient lasted for several years. Following six injections of irgapyrin, the 2nd patient developed a severe allergic reaction manifested by a multiform exudative erythema with vesiculation on the skin and mucous membranes. This illness terminated in death. A severe necrotic allergic reaction of Shvartzmen type was found on mucous membranes of the stomach, the large intestine and the trachea, and to a
