pp. 960-962 (USSR)

ABSTRACT: This conference took place at Khar'kov from 14-16, 1957
and was called by the Chemical and Geological Department
of the Ukrainian Academy of Sciences, ~~the Khar'kov univer-~~
sity imeni A. M. Gor'kiy as well as by the Khar'kov
~~Oblast Administration~~ of the All Union Chemical Society
imeni D. I. Mendeleev. Specialists in the field of so-
lutions from Leningrad, Moscow, Ivanovo, Tashkent and
other towns of the Union took part in it; the program
dealt with the discussion of the problems on electrolyte-
solution solvation, ion association and the influence
of solvents and of temperature on the thermodynamical
properties of electrolytes. After the introduction by

(Thermodynamics and Structure of Solutions, Transactions of the
Conference Held January 27-30, 1958) Moscow, 1958 AN SSSR,
1959. 295 p. 3,000 copies printed.

Ed. I. M. I. Shakhparov, Doctor of Chemical Sciences; Ed. of Publishing
House: M. G. Yegorov) Tech. Ed.: T. V. Polyakova.

PURPOSE: This book is intended for physicists, chemists, and
chemical engineers.

COVERAGE: This collection of papers was originally presented at the
Conference on Thermodynamics and Structure of Solutions sponsored
by the Section of Chemical Sciences of the Academy of Sciences,
USSR, and the Department of Chemistry, Moscow State University,
and held in Moscow on January 27-30, 1958. Contents of the
conference are listed in the book, but not included in this book.
also read at the conference. The problems treated in this work are:
electrolytic solutions, ultrasonic measurement, dielectric
and thermodynamic properties of various mixtures, spectro-
scopic analysis, etc. References accompany individual articles.

TITLE:

Thermodynamic Properties of Electrolytes in Non-aqueous Solutions. IX. Solutions of Potassium Acetate and Potassium Benzoate in Ethanol

PERIODICAL:

Zhurnal fizicheskoy khimii, 1960, Vol. 34, No. 5,
pp. 1021-1026

TEXT: In continuation of systematic investigations of the dependence of the thermodynamic properties of electrolytes upon the nature of the solvent and the concentration of the solution (Refs. 1-3) the authors examined solutions of CH_3COOK and $\text{C}_6\text{H}_5\text{COOK}$ in ethanol. The emf of the chain

$\text{K(Hg)}_x | \text{KA} | \text{AgA} - \text{Ag}$ which has no ion transport, was measured in water

0.1% and ethanol at 25°C , the above-mentioned solutions being used in a wide concentration range. (Table 1: solubility of the salts. Table 2: results). The standard potentials were determined. The values $E_0 = 2.4765$ and

$E_0 = 2.1780$ were obtained for CH_3COOK in water and ethanol, respectively,

whereas $E_0 = 2.4265$ and $E_0 = 2.1795$ hold for C_6H_5COOK in water and ethanol. From the values of E_0 the authors calculated the primary effect $\log \gamma_0$ in ethanol, and for CH_3COOK and C_6H_5COOK they obtained $\log \gamma_0 = 2.52$ and $\log \gamma_0 = 2.51$, respectively. From the latter values they calculated the values of $\log \gamma_0$ for acetic and benzoic acid in ethanol (Table 3). From the emf values they calculated the concentration-activity coefficients γ^{\pm} for CH_3COOK (up to 1.024 mole) and C_6H_5COOK (up to 0.03535 mole) in ethanol (Table 4). Mention is made of N. A. Izmaylov and V. S. Chernyy (Ref. 3). There are 3 figures, 4 tables, and 9 references: 6 Soviet, 1 German, and 2 American.

Characteristics of various stages of the transformation of commercial divinyl into its polymer in the presence of metallic sodium painted on rods. G. G. Koblyanski and Ye. I. Ivanova. *Sintet. Kautschuk* 4, No. 3, 11-12 (1965). The expts. were carried out with an impure divinyl contg. 80% divinyl, 0.3% AcH and 20% pseudobutylene. The reaction was carried out at room temp. with Fe rods covered with Na and placed in stoppered bottles together with the divinyl. It was observed that the polymer passed into soln., so that the latter increased in viscosity, followed by pptn. of a dense polymer on the rods. The liquid polymer in the bottle acquired a higher viscosity until the entire product was a jelly-like mass of a mean Karrer plasticity of 0.4. Various stages of the reaction were investigated by drawing samples of the liquid product and prep. about 2% C_6H_6 solns. The dense polymer contained the insol. variety, and its viscosity was measured in an Ostwald-Ubbelohde viscometer. The results of the tests are tabulated. A. A. Boehlingt

TITLE: On the Compounds of Cerium Salts With Pyridine and Quinoline
(O soyedineniyakh soley tseriya s piridinom i khinolinom)PERIODICAL: Zhurnal neorganicheskoy khimii, 1959, Vol 4, Nr 6,
pp 1377 - 1381 (USSR)

ABSTRACT:

The interaction between cerium trichloride, cerium sulphate and pyridine and quinoline was investigated as well as the thermal resistance of these compounds and in the case of storage over sulphuric acid of different concentration. The stability of the hexathiocyanogen chromiate of cerium hexapyridine $[CePy_6][Cr(CNS)_6]$ and that of the hexathiocyanogen chromiate of cerium hexaquinoline $[Cequin_6].[Cr(CNS)_6]$ were investigated. The production of the initial compounds was described in the experimental part, i.e. the production of cerium (III)-chloride of anhydrous cerium sulphate $Ce_2(SO_4)_3$,

Card 1/3

of pyridine, and quinoline and $[CePy_6][Cr(CNS)_6]$ and $[Cequin_6][Cr(CNS)_6]$. Cerium chloride reacts with vaporous

On the Compounds of Cerium Salts With Pyridine and
Quinoline

SOV/78-4-6-27/44

pyridine and quinoline under formation of compounds of different composition. Complexes with 3, 7, and 10 molecules pyridine are formed in the case of a gradual reaction of cerium chloride and pyridine. The course of the interaction of cerium (III)-chloride with vaporous pyridine and quinoline is given in figure 1. Cerium sulphate does not react with vaporous pyridine and quinoline in the temperature range of $-15 - +20^{\circ}$. The stability of the pyridine- and quinoline compounds of cerium is investigated. The experiments for the thermal dissociation of these compounds were carried out in a special apparatus which is depicted. The pyridine loss of the compound $CeCl_3 \cdot 5.26Py$ under a pressure of 11.5 torr at 21, 50, and 110° is given in figure 3. The pyridine loss of $CeCl_3 \cdot 5.26Py$ at 50° under a pressure of 460, 163, and 11.5 torr is given in figure 4. The pyridine loss of the compounds $CeCl_3 \cdot 7.85Py$ and $CeCl_3 \cdot 9.69Py$ in the case of storage over sulphuric acid of 44 and 84% is given in figure 5. The thermal stability of the compounds $[CePy]_6$, $[Cr(CNS)_6]$ and $[Cequin]_6 \cdot [Cr(CNS)_6]$ was investigated in

Card 2/3

On the Compounds of Cerium Salts With Pyridine and
Quinoline

SOV/79-4-6-27/44

the case of a change of pressure and temperature and is given in figure 6. The separation of the heterogeneous amine of the above mentioned compounds during the storage over sulphuric acid of 50 and 95% was investigated. The course of the curves at 60 and 100° shows that the pyridine- and quinoline complexes have different thermal stabilities. The increase of the anion charge removes the bonding strength between cerium and pyridine in the complexes. There are 7 figures and 3 references, 1 of which is Soviet.

"Molybdenum Content in Certain Soils and Plants of the Volga-Kazanskaya Forest Steppe"

Uch. Zap Kazansk. Un-ta, No 1, 1954, 177-181

Author lists the types of soil containing molybdenum in large quantities. He also lists leguminous plants and seeds which contain it. More molybdenum is found in the vegetation growing on chernozem soil than in the plants on podzolic soils and he concludes that need of legumes for molybdenum is greater than that of grasses and molybdenum fertilizer is more effective on podzolic than on chernozem soil. Abstract : Arterial vessels of 51 human thyroid glands of both sexes
at ages of 3-70 years were studied. Variations in the type
and size of branching of superior (STA) and inferior thyroid
arteries (ITA) were noted. STA is usually of magistral type,
ITA of a loose type. The basic interorganic trunk of STA
is more frequently located along the upper border of lobes
of the gland as an arch with concavity upwards; the trunk
of ITA is at the posterior surface and passes by the lateral
end of each of both lobes. 2 zones of distribution of

TITLE: X-ray diffraction study of ED-5 epoxy-diane resin irradiated with Co⁶⁰ gamma rays and of metallopolymers based on it 19

SOURCE: Ukrainskiy khimicheskiy zhurnal, v. 32, no. 4, 1966, 366-370

TOPIC TAGS: metallopolymer material, epoxy plastic, resin, irradiation effect, gamma irradiation

ABSTRACT: The effect of gamma irradiation on the molecular structure of ED-5 epoxy-diane resin and metallopolymers prepared from it and containing from 1 to 6% copper and 5% lead was studied by using a URS-50 I diffractometer and a scintillation method. The irradiation of purified uncured ED-5 resin and its mixtures with colloidal metals was carried out on a UK-70 000 unit (with a Co⁶⁰ activity corresponding to 70 000 g-eq of Ra). A distinct structure appeared in the resin as a result of the irradiation: under the influence of the high-energy radiation, the highly dispersed copper was found to accelerate the ordering effect in the resin. An appreciable increase in the degree of crystallinity was produced by the irradiation in the binary system ED-5 + 6%

TITLE: Effect of gamma irradiation on the structure of epoxy resin and metallopolymers based on epoxy resin

SOURCE: Ukrainskiy khimicheskiy zhurnal, v. 31, no. 11, 1965, 1164-1167

TOPIC TAGS: gamma irradiation, irradiation effect, epoxy plastic, metallopolymer material, IR spectroscopy, resin

ABSTRACT: Infrared spectroscopy in the range of 600-2000 cm^{-1} was used to determine the effect of Co^{60} gamma radiation on ED-5 epoxy-diana resins and on metallopolymer from these resins containing 1 and 6% copper and 5% lead. In the resins, a new band (corresponding to carbonyl groups) was found at about 1720 cm^{-1} which increased substantially in intensity as the irradiation was continued. At the same time, the integral intensity of the 915 cm^{-1} band decreased. This is thought to be due to the opening of epoxy rings with the formation of carbonyl groups:

UDC: 621.039.55

Card 1/2

ACC NR: AP6013882

A dose of $4 \cdot 10^{18}$ rad was found to decrease the content of epoxy groups by 23-25% in the ED-5 resin. Introduction of colloidal copper and lead leads to a greater reduction in the number of epoxy groups (40% for 1% copper, 55% for 6% copper, and 60% for 5% lead). This suggests that during the irradiation, the colloidal metals cause an increase in molecular weight at the expense of the opening of epoxy rings. Orig. art. has: 3 figures.

Title : Preliminary Data on the Application of Dopane to Lympho-granulomatosis.

Orig Pub : Vopr. onkologii, 1957, 3, No 5, 556-562

Abstract : 50 patients with lymphogranulomatosis in II, principally in III and infrequently in IV stages of disease were treated with dopane (I). The method of application I was individualized, depending on patient's condition, his age and preceding therapy. Usual pattern of treatment: 1st dose 15 mg, subsequent - 10 mg. once in 5 days. Total dosage per course of treatment from 3-4 to 10-12 intakes. In 32 of 50 patients, a good immediate therapeutic effect was observed; in 5 patients, complete resorption of increased peripheral lymphatic nodes and nodes in mediastinum

TITLE: Locking of Oscillator with Double-Tuned Circuit

PERIODICAL: Radiotekhnika i elektronika, 1960, Vol.5, No.9,
pp.1387-1397

TEXT: This is a continuation of an earlier article (Ref.1) in which it was shown that the synchronization band of a locked oscillator may be broadened by coupling a second tuned circuit to the tuned circuit of the oscillator outside the feedback loop. Steady-state oscillation in a synchronized oscillator with two degrees of freedom was considered in Ref.2,3 only for strong coupling between the circuits. The present study concerns systems with weak coupling, approximating the vacuum tube characteristic by a cubic parabola. The feedback coefficient is taken as real. The behaviour of the system is studied for various amplitudes of the external signal and for couplings lower than, equal to and higher than critical. The more favourable amplitude and phase characteristics of the double-tuned system, compared with those of the single-tuned system, has two consequences. Not only is the capture band broadened but the phase characteristics of the

Title : The variability of the biochemical properties of Proteus cultures

Periodical : Mikrobiologiya, 23, 261-264, May/Jun 1954

Abstract : Repeated investigations of the biochemical properties of 163 strains of *Proteus vulgare*, preserved in the laboratory for 2-3 years, showed that many of the characteristics usually used to systematize these microorganisms were unstable. On the basis of these investigations and other material found in literature, the author feels that the division of a number of *Proteus* cultures into individual species, as is proposed in Bergey's manual and other manuals on determinative bacteriology, is insufficiently justified. The discussion is supplemented by charts showing the results of experiments with *Proteus mirabile*, and a reproduction of a table from Bergey's manual. Fifteen references, 11 Soviet.
