3323. HEPATIC TRAUMA - Poranění jater - Janáček Z. Vyzkumný Úst.
Traumatol., Brno - ROZHL. CHIR. 1958, 37/1 (51-55)

The incidence of hepatic trauma has been increasing of late, in connection with automobile accidents. The clinical picture, diagnosis, indications for operation and operative technique and tactics are discussed. The most serious postoperative complications are the hepatorenal syndrome and so-called hepatic death. The pathogenesis of both of these syndromes is not known, but present-day concepts are discussed. Long-term functional results of hepatic trauma are discussed. Directions for improving results in occult trauma of the liver are given.
