The importance of investigation on the diastase function in the blood and in urine for the diagnosis of epidemic parotitis POL.TYG.LEK. 1956, 11/48 (2017-2020) Tables 4

On the basis of 198 investigations in 148 patients, the author noted that the diastase in the blood or in urine was increased in 84.5% of cases. In the first week of the disease diastase in the blood was above 32 U. in 60%, and in urine above 64 U. in 80%; in the next weeks these figures decreased. No correlation was found between the degree of the enlargement of the parotid glands and the diastase level, the severity of the course of mumps and the diastase level in the blood and in urine.

A case of primary dermatomyositis of an acute clinical course and with visceral lesions POL. TYG. LEK. 1957, 12/17 (643-647) Graphs 1 Ilus. 6

The author describes a case of primary dermatomyositis with an acute course, with visceral lesions in the digestive tract, in the kidneys and in the heart muscle. The case is illustrated with microphotographs of skin and muscle samples, taken during life and with post-mortem preparations of the skin, muscles and liver. The finding of extensive vascular lesions in many organs is worth emphasizing.

"Fructose-1,6-diphosphate- and Fructose-1-phosphate- Aldolase Activity in Patients with Trichinosis and with Infectious Hepatitis."

Warsaw, Przegląd Epidemiologiczny, Vol 19, No 2, 1965; pp 189-190.

Abstract: Data on 12 patients with trichinosis between the third and fifth week of the disease, and 10 with infectious hepatitis, as well as 10 healthy patients. The normal aldolase (fructose-1-phosphate) was 2.4 (fructose-1,6-diphosphate) was 8.9 with a ratio between the two of 3.2; in trichinosis, the former fell, latter rose to 30 with a ratio of 22.2; in infectious hepatitis both rose (to 15.6 and 54.7 respectively) for a relatively normal ratio of 3.5. Table. Presented at the 3rd Scientific Assembly of Polish Epidemiologists and Infectologists, Krakow, 5-6 Oct 64. Orig. art. has: 1 table.

2984. HEPARIN AND FIBRINOLYSIS - Heparyna a fibrynoliza - Buluk K. and Januszko T. Zakł. Patol. Ogol. i Doświadczalnej A.M., Białystok - PATOL.POL. 1957, 8/2 (107-114) Graphs 4 Tables 1

Heparin increases the lysis of fibrin induced in its presence as well as in its absence in solutions of bovine plasma globulins. In the tests with heparin a more rapid liquefaction of fibrin occurs and consequently an increase of trichloroacetic acid-soluble tyrosine. The reduction of the fibrinolysis time with added heparin becomes more marked in relation to the length of the fibrinolysis time of the system without heparin. In specimens of the same fibrinolytic potential, but differing in the platelet antifibrinolysin level the reduction of the fibrinolysis time on adding heparin rises with the antifibrinolysin level; if the latter rises, more heparin is necessary to get optimum fibrinolysis. The conclusion is that heparin reduces the fibrinolysis time by inhibiting antifibrinolysin. Wysocki - Poznań

TITLE: Internal combustion engine with supercharged turbocharger

PERIODICAL: Referativnyy zhurnal, otdel'nyy vypusk, 39. Dvigateli vnutrennego sgoraniya, no. 2, 1963, 11 - 12, abstract 2.39.77 P (Czech. pat., cl. 46f, 5/03, 46f, 8/02, no. 98178, January 15, 1961)

TEXT: To better utilize the energy of exhaust gases it is proposed to supply them in two streams 4 and 7 (see Fig.) to the guiding apparatus of the gas turbine 16, the blades of which have such a form in each of two sections 5 and 8 that the circumferential components of gas velocities are equal.. In a 4-cycle engine, 2 exhaust valves 13 and 14 are mounted; the valve 14 opens later than the valve 13. A variant of an engine with an outlet slide valve instead of two valves is described as well as a variant of a 2-cycle engine with two channels connected to the outlet ports. There are 2 figures.

Title : Data on the Reduction of Dimethyl Isonitroso-Malonate
(Dimethyl Mesoxalic Oxime).

Orig Pub: Acta phys. et chem. Szeged, 1957, 3, No 1-4, 125-128.

Abstract: A study has been made of the reaction of catalytic reduction of $\text{HON}=\text{C}(\text{COOCH}_3)_2$ (I) and of acetylation of the produced $\text{H}_2\text{NCH}(\text{COOCH}_3)_2$. 33.6% of $\text{CH}_3\text{CONHCH}(\text{COOCH}_3)_2$ (II) was separated at the hydrogenation of I in a mixture of $(\text{CH}_3\text{-CO})_2\text{O}$ and glacial CH_3COOH on 16% ual Pd/C at 20° for the duration of 48 hours, or at 60° . The hydrogenation of 100 g of I in 150 ml of CH_3OH on 40 g of Ni [Raney's catalyst] is com-

"Reduction of Losses Caused by Fowl Leucosis by Foreign Protein Therapy."

Budapest, Magyar Allatorvosok Lapja, Vol 18, No 3, Mar 63, pp 108-111.

Abstract: [authors' English summary modified] Two big poultry farms affected by leucosis used the Beinbauer foreign protein therapy. Half of the animals received 1 ml subcutaneous doses of swine erysipelas serum produced from horses. During the 8 months observation period, three times more control animals came down with the disease than those

POL. TYG. LEK. 1955, 10/41 (1329-1331)

In comparison with the hyperthyroidism of younger people the hyperthyroidism in old age is more frequently mono- or oligosymptomatic; very often with symptoms of cardiac lesions. Thyroidectomy leads to favourable results. Congestive circulatory failure in the course of hyperthyroidism is not an absolute contraindication to operation. Gaertner - Cracow (VI, 3)

'The Effect of Obesity on the Results of Some Respiratory
Function Tests'

Warsaw, Polski Tygodnik Lekarski, Vol XVIII, No 8, 18 Feb
1963, pp 281-283.

Abstract: /Author's English summary modified/ The effect of
obesity on the function of the respiratory tract was studied
in 32 obese patients aged 21 to 56. Patients with diseases
of the lungs and bronchi, circulatory failure and obesity
due to hormonal disorders were eliminated. Vital capacity
(VC), minute volume (MV), maximal breathing capacity (MBC)
and force expiratory volume (FEV) were estimated.

Decrease of vital capacity due mostly to decrease of

"Follow-up of Patients with Sutured Perforated Gastric or Duodenal Ulcer."

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 12, 18 Mar 63, pp 426-429.

Abstract: [Authors' English summary] Paper deals with follow up (1-20 years) of 218 patients in which gastric or duodenal ulcers have been sutured because of perforation. Less than 10 percent had no relapse, 70 percent had complaints and some relapses, and in 40 percent partial resection had to be performed later. Long-range effects of the operation were better in patients in whom perforation had been the very first sign of the disease. Of the 27 references, 4 are Polish, 5 Russian, 4 German, 1 French, and 14 English.

TITLE: Method of decomposing titanium raw materials
Patent Application Class 40a, 46/50, PV 7621-61
dated 27.12.1961

PERIODICAL: Hutnické listy, no. 9, 1962, 672

TEXT: The method relates to the decomposition of ilmenite, slag, etc., for instance, by means of sulphuric acid. The subject matter of the invention is characterized by the fact that the mixture of titanium raw material and sulphuric acid is made to react in a channel and the reaction is completed in a conditioning chamber for the entrained material. The linear velocity of the material in the channel, the quantity and temperature of the introduced reaction components are chosen on the basis of the temperature of the reacting material in such a way that the material arrives into the conditioning chamber in a freely-running state at a maximum temperature. An example of the equipment is shown in Fig. 5. It consists of a channel 1, an upright cylindrical chamber 2, which may possibly be also in
