AUTHOR: Jarominek, W. (Poland)

TITLE: Investigating linear control systems by means of stability criteria involving determinants

SOURCE: International Federation of Automatic Control. 1st Congress, Moscow, 1960. Teoriya nepreryvnykh sistem. Spetsial'nyye matematicheskiye problemy. Moscow, Izd-vo AN SSSR, 1961. Trudy, v. 1, 183-200

TEXT: A single method is considered for the investigation of both stability and performance of linear systems; the method proceeds from Hurwitz's determinants and Routh's parameters. It was prompted by certain concepts of the elasticity theory, leading to the use of transformed square integral criteria and to the search for methods of solving the inverse problem of stability of linear systems. Such a solution was found on the basis of A. A. Markov's works, as well as the works of V. S. Kulebakin (on the integral performance-measure of transient processes).

Investigating linear control...

where Δ_s are Hurwitz's determinants, S_s ---Markov's determinants,
 $s = 1, 2, \dots, n$. Eqs. (1) and (2), unlike the well-known relationship
 $R_p = \nabla_{2p}$ found by Hurwitz, is very general and holds for both even- and
 odd degrees of the characteristic equation. As an extension of the
 Routh-Hurwitz and Lienard-Chipart criteria, the Markov- and the Lienard-
 Chipart-Markov criteria are formulated. The Markov criterion states that
 for all the roots of the characteristic real polynomial to have negative
 real parts, it is necessary and sufficient that all the coefficients of
 this polynomial be of the same sign and that all the corresponding Markov
 determinants be positive. The advantages of the Markov criterion over
 the Routh-Hurwitz criterion are: It can be used for analyzing linear
 systems of a much higher order and for solving the inverse problem of
 stability of linear systems with constant coefficients. This problem
 consists in choosing the parameters or coefficients of the characteristic
 equation. For this purpose, the Markov determinants S_s of Eq. (1) or
 Eq. (2) are used, yielding the Markov parameters β_s ; from these para-
 meters, the coefficients of the characteristic equation are determined

4

Card 3/9

D274/D304

Investigating linear control...

by formulas (given in appendices). Thus, the Markov criterion permits the direct use of the Hurwitz determinants, of Routh's parameters and of the Markov determinants which are considered below as a measure of the stability reserve. In studying the minimum of the square integral measure, the concept of uniform stability reserve by determinants proved fruitful. Considering the connection between various types of algebraic criteria, the following expressions are found (from the normalized characteristic equations) for uniform stability reserve by the Hurwitz criterion:

$$\Delta_s = \xi_H = \text{const} > 0 \quad (s = 1, 2, \dots, n) ; \quad (6)$$

by the Routh criterion:

$$\Delta_s = \Delta_1^s > 0 \quad (s = 1, 2, \dots, n-1) \quad \text{and} \quad \Delta_{n-1} = \Delta_n ; \quad (7)$$

and by the Markov criterion:

$$S_s^* = \xi_M = \text{const} > 0 \quad (s = 2, 3, \dots, n-1) \quad \text{and} \quad S_{n-1}^* = a_1 S_n^* . \quad (8)$$

Card 4/9

31320

S/560/61/001/000/005/019
D274/D304

Investigating linear control...

(for $m = 0$) and analogous expressions for $m = 1$ and $m = 2$. Minimum of normalized square integral measures: It was shown (in earlier works by the author) that the minimum of

$$\bar{J}_n^{(0)} = \bar{J}_n^*$$

+

is closely related to uniform stability reserve by determinants. In particular, assuming that the system has uniform stability reserve in the sense of the Routh-Hurwitz criterion, one obtains the following simple expression for the normalized square integral measure

$$\bar{J}_n^{(0)} = \frac{1}{2} \left(a_1 + \frac{1}{a_2} + n - 2 \right) \quad (16)$$

hence,

$$\bar{J}_{n \min}^{(0)} = \int_{a_1}^{\infty} \bar{J}_n^{(0)} \frac{1}{a_1} da_1 = \frac{n}{2} \quad (17)$$

Card 6/9

51320

S/589/61/001/000/005/019

D274/D304

Investigating linear control...

From Eq. (17), it follows that the minimum depends only on the degree of the characteristic equation and that it decreases with that degree. Further, the conditions for optimal systems in the sense of stability reserve by determinants are derived; the corresponding square integral measures

are denoted by $\bar{J}_{n_{opt}}^{(m)}$. These conditions determine the optimum distribution

of zeros with a given distribution of poles. It was found that the minimum

of $\bar{J}_{n_{opt}}^{(m)}$ does not exist (only a minimum value in the limit). Similarly,

for certain systems, $\bar{J}_n^{(m)}$ has no minimum either. Hence, the general con-

clusion that the use of the absolute minimum principle of $\bar{J}_n^{(m)}$ for

choosing the parameters of linear system is limited. It is also limited by the often observed inconsistencies between the minimum and the required

Investigating linear control...

Standard Form, for example. The above argument is born out by simulation and many computations, showing the adequacy of the integral measure for the choice of the coefficients of the transfer functions of linear systems. A discussion followed. In it, the author illustrated the choice of transfer functions by interpolation through a numerical example. There are 4 figures, 4 tables and 27 references: 19 Soviet-bloc and 8 non-Soviet-bloc. The references to the English language publications read as follows: E. T. Routh, Stability of a given state of motion, London, 1877; Graham Dunstan, R. C. Warsaw, *Farmacja Polska*, Vol 19, No 11-12, 25 Jun 63, p. 252

Abstract: Starting with a criticism of the newly issued
Mala Encyklopedia Powszechna (Small Popular Encyclopedia),
PWN [Panstwowe Wydawnictwa Naukowe, State Science Publica-
tions] for the omission of the biographies of some of the
greatest Polish pharmacists, the author reviews some of the
contributions of important pharmacists of the past, which
are unfortunately little known to the general public, and
urges their greater popularization by publication of bio-
graphies, exhibition of their pictures in pharmacies and
allied public places, etc. There are no references.
