Fuels and Carbonization Product

Control of the completeness of combustion on the basis of the Bunte square diagram. Stefan Kasprzyk, Biul. Inst. Nauk.-Badawc. Przemyslu Węglowego (Katowice), Komun. No. 33, 30 pp. (1948).—Equations are derived for taking into account the inert constituents, i.e. CO₂ and N, present in fuel when constructing a Bunte diagram. The Bunte diagram can be used to det. loss in combustion efficiency as shown by unburnt C (soot and coke) in the flue gases. By comparing the results of an accurate analysis of the fuel with those of flue-gas analysis, a graphical method is evolved for detg. the loss caused by C formation. Application of the method is illustrated by a series of examples in which the CO, H, and CH₄ content of the flue gases is taken into account.

Furnace Based on the Operation Results of a Test Boiler Plant.

„Ocena pracy nowych palenisk rusztowych na podstawie eksploatacji próbnej instalacji kotelowej” Energetyka No. 1, 1954, pp. 4–10.
3 figs., 1 tab.

A description is given of the design and performance of a test boiler plant comprising two boilers. One of them is equipped with a reciprocating overfeed stoker with a oil drive, and the other with a flat grate of a more modern type and a pneumatic fuel feed. Test results of the two boilers are given in table form for comparison. On the basis of the operation data obtained, a detailed analysis is carried out of the possibilities of modernizing existing boiler plants and of criteria justifying the step.

Kasprzyk, S. Suggestions Based on Working Experience and Measurements, for Improving Boiler Working in Industrial Power Plants.

"Wytłocne usprawnienia pracy kotłów w energetyce przemysłowej w świetle doświadczeń ruchowych i pomiarów" Gospodarka Clepina-Energetyka Przemysłowa No 4, 1954, pp. 21-34, 7 figs., 2 tabs.

Thermal measurements of boilers make it possible to achieve more economical heat management in boilerhouses, since condition of exploitation and overhaul of boilers is improved and rebuilding and modernization facilitated. Influence on working efficiency of impurities adhering to the heating surfaces of flue boilers, indications for correct operating methods. The author describes the methods used for preventing smoke flue from being clogged with ashes, and for protection against other disturbances in the correct functioning of water tube boilers. Methods, based on working experience in a boiler room, of improving the efficiency of boiler houses by properly made inspections of the smoke flues and chamber drafts. Estimates of the working value of chamber water-tube boilers and of the older section type are given, and the possibilities of increasing both the capacity and the efficiency of such boilers are analysed. Common disadvantages of movable firing grates of the

boilers mentioned above; the influence on boiler efficiency of draft and forced draft, state of a fire box and quality of fuel. Methods of adapting movable grates of older types, for burning fine-grained coal and, in particular coal slack.

Title : Yeast Microflora of Potato Ensilage.
Orig Pub : Acta microbiol. polon., 1956, 5, No 3-4, 401-410
Abstract : A study was conducted on potato ensilage with an admixture of 5 and 10% of clover, and ensilage without admixtures. An increase in the number of yeast cells and the concentration of reducing substances in the course of fermentation was stimulated by the addition of clover. No correlation was found between the concentration of reducing substances and the number of yeast cells. 10 strains of *Saccharomyces* sp., 5 strains of *Torulopsis* and 16 strains of *Mycoderma* were isolated from the ensilage.

TITLE: A Practical Method for the Design of Side-hill Drainage Trenches
(Prakticheskiy metod rascheta nagornykh kanav)

PERIODICAL: Nauchn. soobshch. Tbilissk. in-t inzh. zh.-d. transp. 1957,
Nr 16, 11 pp, ill.

ABSTRACT: The author suggests a method for the design of side-hill drainage trenches which takes into account the continuous water runoff from the ground above the trench. This continuity is taken into account by the introduction of a correction factor into the value of the roughness coefficient $n^* = n\sqrt{K_T}$. The correction of the value of the roughness coefficient for the transit discharge is determined from the formula

$$K_T = 1 + \frac{qh}{Q} + \frac{v^2}{gh} \frac{1}{I_f}$$

Card 1/2

where q is the specific discharge of water; Q is the total discharge

SOV/124-58-10-11140

A Practical Method for the Design of Side-hill Drainage Trenches

of water on the calculated section of the trench; h and v are the depth and mean velocity of the current, and l_f is the slope of the bottom of the trench. A comparison is presented of the design of trenches by the usual method and in accordance with the method suggested in the paper under review. The depths in the given sections are somewhat greater when arrived at according to the method suggested by the author than when calculated in the usual manner. Taking into account a greater accuracy in the determination of the water depths in side-hill drainage trenches, the author suggests a decrease of the permissible height of the berm of the ditch over the calculated horizon to 0.15 m (instead of 0.25 m provided in the technical specifications for the design of railroads).

BAUTHOR: Kassabov, I.; Bakalska, S.ORG: Institute of Physics, BANTITLE: Phosphorus diffusion during solar silicon cell productionSOURCE: Bulgarska akademiya na naukite. Doklady. v. 18, no. 7, 1965, 611-613TOPIC TAGS: solar cell, silicon single crystal, phosphorus, sublimation, physical diffusion

ABSTRACT:
The known methods for silicon solar cell production by phosphorus diffusion are still quite complex and unsuitable for industrial purposes (see, e.g., J. Mandelkorn et al., J. Electrochem. Soc., 109, 1962, No 4; I. M. Mackintosh, Ibid., 109, 1962, No 5). The present paper offers a new phosphorus diffusion method which produces highly efficient solar battery elements without requiring special and expensive apparatus or auxiliary materials. It can be also easily adapted to mass production (I. Kassabov, S. Bakalska, Author's certificate No 10759 from 6. 12. 1963, People's Republic of Bulgaria). A P₂O₅ layer is deposited on silicon wafers at a relatively low temperature. Subsequent phosphorus diffusion is achieved at high temperature in an open furnace directly in the air. The P₂O₅ layers are deposited by sublimation onto the silicon wafers' quartz tube containers. Solar cells thus obtained have an

efficiency of more than 12%. They are made from single crystal silicon with a resistivity of about 2 Ohm/cm at a diffusion temperature of 1000 °C over a 10 minute period. TITLE: Method for the isolation of solid-state circuits through diffusion

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 19, no. 8, 1966, 705-708

TOPIC TAGS: solid state, silicon semiconductor, circuit, silicon wafer, solid state circuit, semiconductor, silicon crystal

ABSTRACT: A method is described for isolating passive components, such as phosphorus, from common wafers used in integrated semiconductor circuits. The method is based on the planar diffusion of separated n-regions and the inhibition of leakage in the inversion layer, between the n-regions, through a p⁺ network. Diffusion was effected in an open quartz tube at 1050°C±1°C for 30 min. After a prediffusion layer was formed, the specimens were washed in distilled water, using ultrasound to enhance the cleansing process. The method makes it possible to obtain diffusion layers with a surface concentration of 9.10¹⁵ to 2.10¹⁸ cm⁻³,

*5166. **Plasmacellular leukaemia associated with Paget's disease** Paget kórral szövödött plasmaszjes leukaemia. KASSAI A., SULYOK D. and SZÁSZ G. A Fejér megyei Tanács Kórháza *Mag. Orkai* 1959, J 2 (85-90) Illus. 8

A report is given on a 68-year-old woman, in whom Paget's disease of the roof of the skull was found by means of X-ray examination. Westergren: 115 mm. hr. Serum protein: 8.43%; leucocyte count: 5,600. A considerable hepatosplenomegaly was found. In the serum plasma cells were found in 34%, in the material obtained by puncture of the spleen they were found in 17.2%. On autopsy a plasma-cell infiltration was found, especially in the spleen and the lymph nodes. On microscopical examination the bone of the roof of the skull showed the changes characteristic of Paget's disease. Plasma-cell foci were also found in these bones. It is thought that the plasmocytoma, which was of extramedullary origin had secondarily infiltrated the cranial bones. It is also possible that a genetical correlation exists between osteitis deformans Paget and plasma-cell leukaemia, since it is known that in osteitis deformans various malignant tumours may develop in the affected bones.

ABSTRACT: Guinea pigs were sensitized with horse serum and different serum fractions were injected to induce shock. It was found that beta-globulin has the most pronounced anaphylactogenic effect. It was also shown that in the hypothermic state guinea pigs sensitized with horse serum become desensitized to the serum fractions with a weak anaphylactogenic effect but not to those with a strong one. Abstract: [Authors' German summary] The authors report a case of gastroschisis which was successfully corrected by surgery. The prolapse of the small and large intestines which, for four hours, protruded on the right side of the navel was replaced into the abdomen and the abdominal wall was closed successfully. From the 14 cases reported in the literature, this is the sixth patient who survived. 1 Eastern European, 7 Western references.

TITLE : Treatment of Lung Helminthiases in Sheep with
Ditrazine Phosphate

ORIG. PUB. : Magyar allatorv. lapja, 1958, 13, No 1, 9-13

ABSTRACT : The twofold subcutaneous administration of ditra-
zine phosphate in 1:3 aqueous solution in a dose
of 0.2 g/kg with an interval of 24 hours showed
good effectiveness in dictyocaulosis of sheep.
Extensity effectiveness of the preparation,
according to data obtained by larvoscropy and
autopsies, was higher than 80%, and intensity
effectiveness fluctuated within 90-100%. The

"The Effects of Loxuran (Diethylcarbamazine Citrate) on Ovine Lung Worms."

Budapest, Magyar Allatorvosok Lapja, Vol 18, No 4, Apr 63, pp 163-165

Abstract [Authors' English summary modified]: Loxuran, applied in a 20-percent aqueous solution intramuscularly in a dose of 0.02 g/kg and repeated 24 hours later, reduces the intensity of moderate Dictyocaulus infestation by 96 to 99 percent, and its extensity by 85 to 93 percent. Increasing the dose to 0.03 g/kg did not raise the effect of the drug significantly. No side effects were observed. Ewes in advanced pregnancy should not be treated. Doses of 0.02 to 0.20 g/kg proved ineffective against Protostrongylidae. 22 references, including 6 Hungarian, 8 Russian, 1 Rumanian, 2 Czech, and 5 Western.
