TITLE: Comparison of the Strength of Some Summation Methods of Convergent Series With the Methods of Cesaro's Means

PERIODICAL: Izvestiya vysshikh uchebnykh zavedeniy. Matematika, 1959,
Nr 5, pp 131-145 (USSR)

ABSTRACT: The following notations are used:

$$x^{(0)} = 1 \quad (x \geq 0)$$

$$x^{(k)} = x(x-1)\dots(x-k+1) \quad (x \geq 0, k=1, 2, 3, \dots)$$

$$x^{(\bar{s}, s)} = 1 \quad (s \geq 0, x \geq 0)$$

$$x^{(\bar{k}, s)} = x(x+s)(x+2s)\dots[x+(k-1)s] \quad (s \geq 0, x \geq 0, k=1, 2, 3, \dots)$$

Let

$$g_{n,k}^{(s)} = \frac{x^{(k)}}{(n+1)^{(\bar{k}, s)}} \quad \text{for } 0 \leq k \leq n$$

$$(1) \quad g_{n,k}^{(s)} = 0 \quad \text{for } k > n \quad (n, k=0, 1, 2, 3, \dots)$$

The series

$$(2) \quad \sum_{k=0}^{\infty} g_{n,k}^{(s)}$$

Card 1/2

Comparison of the Strength of Some Summation Methods SOV/140-59-5-14/25
of Convergent Series With the Methods of Cesaro's Means

with the partial sums $S_k = \sum_{v=0}^k a_v$ is called (P,s) -summable with the

number 1 if $\lim_{n \rightarrow \infty} \sigma_n^{(P,s)} = 1$, where $\sigma_n^{(P,s)} = \sum_{k=0}^{\infty} g_{n,k} s_k$.

Theorem 2: There exist series being (P,s) -summable ($s \geq 0$) but not summable according to Abel.

Theorem 3: The methods (P,s) ($s \geq 0$) are stronger than Cesaro-methods of arbitrary finite order.

The first theorem asserts the regularity of the methods $P(q,r,s)$ which are introduced as a generalization of the methods (P,s) .

The author mentions A.S.Sokolin, and I.P.Natanson.

There are 8 references, 4 of which are Soviet, 1 English, 1 American, 1 German, and 1 Italian.

TITLE:

Linear combinations of Cesaro integral transformations
and summation of Fourier integrals

PERIODICAL:

Referativnyj zhurnal, Matematika, no. 3, 1962, 7,
abstract j3' ("Sb. statey po matem. i fiz.", Orenburg,
1961, 259-255)

TEXT:

According to the author, the integral

$$\int_0^{\infty} F(u) du \quad (1)$$

is summable with the sum 1 using the method (LC_s) resulting from the
systems of real numbers $\{\alpha_v\}$ and $\{\beta_v\}$, $\beta_v > 0$, $v = 1, 2, \dots, m$, if

$\lim_{\lambda \rightarrow \infty} L_s(\lambda) = 1$, where

$$L_s(\lambda) = \sum_{v=1}^m \alpha_s c_s(\beta_v \lambda), \quad c_s(\lambda) = \int_0^{\lambda} \left(1 - \frac{u}{\lambda}\right)^s F(u) du.$$

Card 1/3

S/044/62/000/003/010/092
C111/C222

Linear combinations of Cesaro ...

The special case ($\alpha_1 = 2$, $\alpha_2 = -1$, $\beta = \frac{1}{2}$, $s = 3$) was considered by G. P. Safronova (Dokl. AN SSSR, 1951, 28, no. 6, 1101-1104), who found that this method is equivalent to method $C(s, 3)$. The author proves that (LC_s) with $L_s(\lambda) = \alpha C_s(\lambda) - (\alpha - 1)$. $C_s(\beta\lambda)$ is equivalent to method C, s ; this implies, in particular, the results of G. P. Safronova. The equivalence of methods (LC_s) and C, s is not considered in a more general form. In the second part of the paper, the summation of Fourier integrals with the method (LC_{2k-1}) is considered, where

$$\beta_v = \frac{k-v+1}{k} \text{ and}$$

$$\alpha_v = (-1)^{v-1} C_{2k}^{v-1} \left(1 - \frac{v-1}{k}\right)^{2k-1} \frac{1}{\omega(k)}, \quad v = 1, 2, \dots, k,$$

$$\omega_k = \sum_{v=1}^k (-1)^{v-1} C_{2k}^{v-1} \left(1 - \frac{v-1}{k}\right)^{2k-1}.$$

Card 2/3

S/044/62/000/003/010/092
C111/C222

Linear combinations of Cesaro ...
This method is denoted by (I, k) . It is shown that the (I, k) transform
of Fourier integral is equal to

$$I_k(\lambda, x) = \frac{1}{\pi} \frac{2^{2k-1}(2k-1)!}{\lambda^{2k-1}} \frac{1}{\omega(k)} \int_{-\infty}^{\infty} I(\lambda t) \times \left[\frac{\sin \lambda \frac{t-x}{2k}}{t-x} \right]^{2k} dt.$$

Proven is the theorem:
Let $f(t) \in L(-\infty, \infty)$ ($k \geq 2$). Then $\lim_{\lambda \rightarrow \infty} I_k \times (\lambda, x) = f(x)$ at every

point in which $f(t)$ is the derivative of its indefinite integral.

"New Method of Producing Bis(triorganosilyl)phosphites" 7

24
13

Moscow, Zhurnal Obshchey Khimii, Vol 36, No 6, 1966, p 1155

Abstract: A new method was developed producing bis(triorganosilyl)-
phosphites in pure form in up to 90% yield, without using an inert gas. The
phosphites are produced by the reaction of phosphorous acid with triorganosilyl-
silanes in the presence of a colloidal nickel catalyst. Bis(methyldiethyl-
silyl)phosphite, bis(triethylsilyl)phosphite, and bis(dimethylphenylsilyl)-
phosphite were prepared and characterized. [JPRS: 37,023]

Cement fibrolite. B. N. Kaufman. Byull. Sroitel. Tekh. 1953, No. 2, 18-20; Referat. Zhur., Khim. 1953, No. 7305.—The treating of excelsior was tested in CaCl_2 soln., Na silicate soln., in both varying the sequence, and in a mixt. of both. Treating the wood fiber in 6% CaCl_2 was quite sufficient. Best results were obtained by 2-day steeping in the soln. followed by steaming for 16 hrs. at 80°. Compressed, freshly prep. fibrolite sheets were satisfactorily steamed for 24 hrs. at 48-53°. Everything being equal, the strength of cement fibrolite sheets depended on the bulk wt. of fibrolite, quantity of cement used, and its activity.

No 9, pp 17-19

States experience has shown that cold compns for
roofing papers, mfr of which was begun in 1950-
1951, do not have expected advantages (no need for
preheating, high adhesive quality, economy) over
hot compns. Consequently many construction organi-
zations have refused to use them. As verified by
tests of Cent Sci-Res Inst of Industrial

271T68

Structures, during storage cold compns frequently
thicken so much that they cannot be used without
initial heating. Gives details of complaints and
tests.

inserted. 3,000 copies printed.
TOPIC TAGS: construction material, structural plastic, heat-resistant plastic,
chemical resistant material, solid mechanical property, synthetic material
PURPOSE AND COVERAGE: The book presents a summary of Soviet and foreign produc-
tion experiments using various porous plastic building materials. It presents
a classification of porous plastics, describes in detail their physico-
mechanical properties and the possibility of using porous plastics as building
materials. It describes the various porous plastics in detail, and also
possible methods of using them in construction (in particular, large-panel) as
heat-noise isolation materials. The book is intended for engineering-technical
workers in the building materials and construction industry; it can also be
used for designers and students of technological higher education institutions

TITLE: Role of the reticular formation of the brain stem and nonspecific systems of the optic thalamus

12

SOURCE: Ref. zh. Biologiya, Abs. 19P18

REF SOURCE: Sb. Evolyutsiya funktsiy. M.-L., Nauka, 1964, 186-197

TOPIC TAGS: brain, conditioned reflex, chlorpromazine, nervous system drug, drug effect, behavior pattern

ABSTRACT: Cortex activity change induced by inhibition or intensification of the nonspecific system function of the brain stem or thalamus with the administration of adrenalin (subcutaneously 0.75 to 1 ml of a 1:1000 solution), chlorpromazine (intravenously or intramuscularly 25 to 100 mg), or sodium amytal (intravenously 150 to 200 mg) was investigated in patients with various psychic syndromes and also in convalescents. Conditioned reflexes were developed by preliminary verbal instructions, verbal reinforcement and also by defensive and kinesthetic reinforcement. Despite sharp changes of unconditioned reflexes under the action of all the above drugs, the formation of new conditioned reflexes and the

performance of earlier developed conditioned reflexes were possible; thus, the synapse function basically was not affected, though certain cortical activity changes were noted. It was demonstrated that irradiation of excitation along the cortex is determined by the state of the nonspecific systems of the thalamus and irradiation of excitation in the vegetative centers depends on the reticular formation of the brain stem. Preservation of discriminatory inhibition is determined by the interrelation of the reticular formation of the brain stem and the nonspecific systems of the thalamus (which is disturbed following sodium amyntal administration). The function of impressing traces of stimuli striking the cortex improves with intensification of reticular formation activity and deteriorates with its inhibition. Under the action of these preparations, motor reflexes also changed and certain changes of mood were observed. Bibliography of 21 titles. R. Pavlygina.

VISCOSITY OF WELDING SLAGS. L.V. Everev and D.L. Kaufman.
(Metallurgist, Russia, 1937, vol. 12, No. 5, May, pp. 76-81).
(In Russian.) The results are reported of an examination of twenty-three slags formed by coated electrodes. The composition of the slags was silica 20-40%, titanium dioxide 0.3%, oxides of iron 10-20%, manganous oxide 6-30%, alumina 5-15%, alkaline earth oxides in varying amounts, and chromic oxide (in six slags only). These slags were mostly acidic. The viscosity characteristics of the slags are discussed: certain of them were of the crystalline type with a low viscosity (approximately 1 poise) above the point of crystallisation and high viscosity (40 poise) below this point. The remainder were glasses exhibiting a gradual change in viscosity (20-80 poise) with variation of temperature. The viscosity of slags containing no chromic oxide is essentially a function of their silica content: chromic oxide increases the viscosity, and titanium dioxide decreases it when substituted for silica. This property of titania is of some practical importance as evidenced, for example, in the use of ilmenite for electrode coatings.

PROCESSES AND PROPERTIES INDEX																																																																																																																																																																																																																																																																																																																																																																																																																																								
C4 Aging of eggs. II. Decrease of hatchability and catalase content in stored eggs. Laura Kaufman. Ann. Univ. Maria Curie-Skłodowska Lublin-Podolska "Sect. I", 2, 19-27(1947)(English summary).—The hypothesis has been advanced that the delayed growth and mortality of embryos developing in eggs on storage is due to toxicity caused by the accumulation of H_2O_2 . Catalase was detected in egg yolk and egg white of (a) freshly laid eggs, (b) eggs 10 days old, and (c) eggs 30 days old. Egg yolk contains relatively small amounts of catalase, and its amount does not change essentially during storage (0.20-0.40 cc. O liberated at 25° by 3 g. of egg yolk). The catalase content of egg white in freshly laid eggs and in eggs 10 days old is essentially the same (7.00 and 7.10 cc. O liberated at 25° by 3 g. of material, resp.), but a considerable decrease is noted in 30-day old eggs (2.00 cc. O under same conditions as above). There is a wide range variability in the catalase content of freshly laid eggs from various hens, and no relationship between resistance to storage and catalase content of eggs could be ascertained. Thus, it is doubtful that decrease in catalase content is responsible for the impaired development of the embryo on storage of the egg. Injections of H_2O_2 (0.2 cc. of 0.3-10% soln.) into the egg white of freshly laid eggs had no effect on the development of the embryo. Solns. of glutathione M/500 and M/100, resp., were injected into stored eggs 10-14 days old, and those more than 14 days old. The eggs were placed in an incubator 30 days after they were laid and the embryo mortality after 3 days of incubation was observed. Eggs of the same age injected with distilled H_2O were used as controls. Glutathione reduced the mortality in 10-14 days old eggs from 83.3 to 29.4%, and in eggs older than 14 days from 80.0 to 41.8%. The mortality of embryos in untreated eggs was 80.0%. Thus glutathione reduces the embryo mortality in eggs stored 30 days before incubation if it is injected during the second week of storage.

Title : The Effect of Ultraviolet Rays on Domestic Birds. Part II. Its Effect on the Growth of Ducklings.

Orig Pub : Ann. Univ. M. Curie-Sklodowska, 1954 (1955) E9, No 6
89-101

Abstract : The eggs of Peking ducks were irradiated with ultraviolet rays during the first 5 days of incubation. The average weight of the hatched duckling of 8.9 to 10 weeks old was higher than that of control birds (average 12 percent), due to the rate increase under irradiation. During the first days of incubation, the embryos grow faster and hatch 0.5 days earlier. The increased rate of growth continues through the first three weeks of the ducklings' life after hatching.

✓ 1401. Sex modification in cocks during their embryonal development. I. Kaufman. Ann. Univ. M. Curie-Skłodowska, 1934, 9E, 25-40 (UW). M. Curie-Skłodowska, Lublin, Poland. Reticosterol has been introduced into the air-chamber of eggs after 24 and 48 hr of incubation. Both oviducts develop in the female, the right incompletely, in males the oviducts develop and the left testicle is flattened and both testicles show atrophy of the seminiferous ducts and hypertrophy of interstitial tissue. Hormonal balance is disturbed and pathological changes occur in sex glands and sex-ducts, especially in the male. The sex dimorphism of feather colouring, characteristic of the chicks used, appears equally in the birds hatched from the "hormonised" eggs. The male-feathered chicks have a greater growth-rate than the female-feathered chicks but they do not crow or show sex-instinct. E. V. RAZENSKY

I. Effect of ultra-violet irradiation on viability of poultry. I. Irradiation of eggs during incubation. L. Kaufman, W. Gochowski and J. Zgusta. II. Growth of ducklings from irradiated eggs. L. Kaufman and B. Ondrakiewicz (*Zes. Univ. M. Curie-Skłodowska*, 1954, 9, Z. 49-60, 89-101).—I. Irradiation (A 3030-4000 Å) of hen's and duck's eggs for 5 min. daily during the first 6-9 days of incubation raises hatching rates by up to 35%; this effect is not observed with eggs irradiated on the 9th-18th days.

II. Ducklings from eggs which had been irradiated (5 min. daily for the first six days of incubation) hatched ~12 hr. before controls, and grew faster, up to the age of 10 weeks. R. Trescony.
