TITLE: A device for balancing three-dimensional mechanisms with nonparallel rotation axes of the components. Class 42, No. 179542 [announced by Moscow Higher Engineering College im. N. E. Bauman (Moskovskoye vysshoye tekhnicheskoye uchilishche)]

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 3, 1966, 79

TOPIC TAGS: measuring instrument, static load test, dynamic stress

ABSTRACT: This Author Certificate presents a device for balancing three-dimensional mechanisms with nonparallel rotation axes of the components. The device contains a platform with six degrees of freedom and a measuring unit (see Fig. 1.). The design provides simultaneous measuring of the static, dynamic, and axial components of unbalance in the mechanisms. The measurement unit of the device includes three unbalance sensing elements. The axis of sensitivity of one of the sensing elements

AUTHOR: Kazakov, G. 107-57-4-6/54

TITLE: A Powerful Means of Cultural and Technical Progress (Mogucheye sredstvo kul'turnogo i tekhnicheskogo progressa)

PERIODICAL: Radio, 1957, Nr 4, pp 5-6 (USSR)

ABSTRACT: "Radio Day" is one of the remarkable days which are observed in the USSR every year. The 20th Congress of the Communist Party emphasized the necessity for better utilization of radio in the communist education of the people. An extensive program of radio development is to be carried out during the Sixth Five Year Plan. Only sixty-two years have passed since A. S. Popov, an outstanding Russian scientist, demonstrated his first radio receiver. Soviet scientists, radio amateurs and inventors have made great contributions in all fields of radio application. A powerful radio industry and dozens of institutes and scientific organizations engaged in radio and electronics research, etc., have been created over a short period. Millions of radio devices of all sorts are produced in our country yearly. The number of radio receivers and TV sets produced annually now is several times as great as the total number of all radio receivers in the Soviet Union before World War II. Radio plays a most important part in modern science and engineering; it has inexhaustable

A Powerful Means of Cultural and Technical Progress 107-57-4-6/54

potentialities. Thirty-five years ago, Lenin was highly appreciative of radio as a means for disseminating propaganda. In our time, over one hundred million Soviet people listen to radio broadcasts emanating from Soviet cities. Also, many millions of people listen to Soviet broadcasts abroad. Radio and TV broadcast programs should be improved, should be made more diversified and interesting to better meet the demands of the multi-million audience. The rapid growth of radio audiences requires that the quality of multi-program broadcasts be improved upon. This problem has been aggravated by an extreme overcrowding of the air and by the growth of noise. For these reasons, along with improvements in radio broadcast networks, multi-program wire-broadcast networks should be further developed. Radio amateurs and DOSAAF organizations are urged to help in the further development of wire-broadcast networks. The saving of non-ferrous metals in the production of radio receivers and TV sets and savings in power consumption by these apparatus are urged. Amateur experimentation with long-distance TV reception is encouraged. Special attention is called to the organization of radio amateur work in high schools. Every future skilled worker or engineer should know the principles of radio engineering.

AUTHOR: Kazakov, G.

TITLE: Commemorating the 100th Anniversary of A.S. Popov (K 100-letiyu so dnya rozhdeniya A.S. Popova) - The Inventor of Radio (Izobretatel' radio)

PERIODICAL: Radio, 1959, Nr 2, pp 12-13 (USSR)

ABSTRACT: The author honors the scientific work of the Russian scientist A.S. Popov, who is regarded as the inventor of radio communication. The author mentions additionally that 25 million radio receivers have been sold to the population during the last 10 years; the actual number of radio receivers in all amounts to 50 million. Television is also developing vigorously; in 1953, there were only 3 television transmitters and 225,000 receivers, but by 1958, 53 television transmitters were already operating and the number of receivers was approximately 3 million.

TITLE: Some Preliminary Results From the Compilation of a Post-Precambrian Scale of the Absolute Geochronology According to Glauconites (Nekotoryye predvaritel'nyye dannyye po razrabotke posledokembriyskoy shkaly absolyutnoy geokhronologii po glaukonitam)

PERIODICAL: Geokhimiya, 1958, Nr 4, pp. 296 - 306 (USSR)

ABSTRACT: The paper is divided into four sections:

1) Short mineralogical and lithological characterisation of glauconites.

2) Method of separation of glauconite from the glauconite-containing sedimentary rocks. The operations carried out are compiled in a table in a clearly arranged manner.

3) Determination of the content of potassium and argon in glauconites. The emission of argon was investigated; the main amount escapes approximately at 300°, the remainder in the dehydration (500 - 650°). A table gives the results obtained by the analysis and the age computed from

Card 1/3

"APPROVED FOR RELEASE: 06/13/2000 CIA-RDP86-00513R000721310003-4

them for the 22 investigated samples from the European part of the Soviet Union and Czechoslovakia.

4) The results of the argon method for the dated glauconites. All samples are accurately dated biostratigraphically. Geographical, stratigraphic, and paleontological data for the individual samples are compiled. The time scale of the geological ages which results herefrom is compared with the results obtained by other authors and with the scale according to Marble (Marbl). The time data agree well with those of Marble, except those for the Predevonian times which are too high.

Finally the further objects of research are discussed which result from the hitherto achieved results. The lithological-mineralogical working of the material was carried out in the Laboratory of Geochemistry of Sedimentary Rocks (Laboratoriya geokhimii osadochnykh porod, GEOKhI AN SSSR), the age determinations in the Laboratory of Absolute Age Determination (Laboratoriya absolyutnogo vozrasta, VSEGEI). There are 2 figures, 2 tables, and 24 references, 16 of which

AUTHORS: Baranov, V. I., Knorre, K. G. SOV/7-59-6-14/17

TITLE: Chronicle. The VIII Session of the Commission for the Determination of the Absolute Age of Geological Formations (at the Otdeleniye Geologo-geograficheskikh nauk AN SSSR (Department of Geological-geographical Sciences AS USSR), May 18 - 22, 1959, Moscow)

PERIODICAL: Geokhimiya, 1959, Nr 6, pp 562 - 563 (USSR)

ABSTRACT: The 8th regular session of the (Commission on the Determination of the Absolute Age of Geological Formations) was held in Moscow from May 18 to May 22, 1959 at the Institut geokhimii i analiticheskoy khimii im. V. I. Vernadskogo (Institute of Geochemistry and Analytical Chemistry imeni V. I. Vernadskiy). A series of summarizing reports was held on age determinations in the most important parts of the USSR, which are to be presented to the 21st International Geological Congress. The following reports are concerned:

A. V. Polkanov, E. K. Gerling: Problems of the absolute age of the Precambrian of the Baltic Shield.

A. P. Vinogradov, L. V. Komlev, A. I. Tugarinov: The absolute age of the Ukrainian crystalline shield.

Card 1/4

P. P. Semenenko, Ye. S. Burkser, and N. N. Ivantishin: Age groups of the mineralization of the rocks of the Ukraine in their absolute age.

A. P. Vinogradov, A. I. Tugarinov, K. G. Knorre, and Ye. V. Bibikova, V. V. Zhirova, S. I. Zykov: The age of the Precambrian rocks of the crystalline fundament of the Russian Platform.

I. Ye. Starik, A. Ya. Krylov, M. G. Ravich, Yu. I. Silin: The absolute age of the rocks of the eastern part of the Antarctic continent.

A. Ya. Krylov: The absolute age of the rocks of the Tsentral'nyy Tyan' Shan' and the employment of the argon method for metamorphous and sedimentary rocks.

G. D. Afanas'yev: Results of the geochrony formations of the Caucasus.

L. P. Ovchinnikov and M. A. Garris: Age of the geological formations of the Urals and the Priural'ye (Cis-Urals).

N. I. Poleva and G. A. Murina, G. A. Kazakov: Absolute age determination of the sedimentary and volcanic formations.

Card 2/4

L. P. Krasnyy and N. I. Poleva: Absolute age of the magmatic rocks of the (Soviet) Far East.

L. V. Komlev: Absolute age of the granite intrusions of Kazakhstan.

The research work of a number of laboratories, RIAN, GEOKhI, LAGED, VSEGEI, ., UFAN, etc aroused great attention, especially a report of E. K. Gerling, Yu. A. Shukolyukov on the concentration of the isotope Ar^{38} in uranium minerals as well as the comprehensive research work carried out by the vozrastnaya laboratoriya Akademiya nauk Gruzinskoy SSR (Laboratory of Age Determination of the Academy of Sciences of the Gruzinskaya SSR) under the application of isotopic dilution and flame photometry. The determination of the age of sedimentary rocks was discussed; A. Ya. Krylov proved in his report how well radiogenic argon is conserved in destroyed products of rocks such as boulders, sands, sandstones, clays, and muds. A. I. Tugarinov and S. I. Zykov were the first to attempt to determine the absolute age of sedimentary carbonate formations according to isotopic composition of lead.

TITLE: Investigation of the suitability of glauconites for determining the absolute age of sedimentary rocks

SOURCE: Geokhimicheskaya konferentsiya. Khimiya zemnoy kory, Moscow, 1964. Khimiya zemnoy kory (Chemistry of the earth's crust); trudy konferentsii, v. 2. Moscow, Izd-vo Nauka, 1964, 539-551

TOPIC TAGS: absolute age, potassium argon dating, rubidium strontium dating, glauconite, X-ray diffraction, sedimentary rock, glauconite

ABSTRACT: Owing to discrepancies in the figures for the absolute age of glauconites obtained by the K-Ar and Rb-Sr dating methods, the author analyzed the factors involved in distorting the age values; changes in the chemical composition of glauconites relative to their geological age; change in time of the most important mineral-forming oxides in glauconites; the basic factors influencing the reliability of the determination of th absolute age of glauconites; the migration of argon from the crystal lattice of glauconite relative to the temperature conditions; the Ar^{40}/K^{40} ratio in glauconites of different granulometid composition; the effect of cation exchange in glauconites on the results of the

absolute-age determination; the effect of weathering processes on the retention of oxygen and potassium in the mineral; the effect of terrigenous admixtures and the depth of burial of glauconitic rocks on the determination of their absolute age; and the effect of treating glauconite with acids and gravity solutions during separation on the age determination results. The experimental study demonstrated that unaltered varieties of glauconite are sufficiently reliable indicators of the absolute age of sedimentary rocks and can be used in geological practice. A combination of X-ray diffraction, mineralogical and chemical anayses was used to to elicit unaltered varieties of galuconite. Orig. art. has: 6 tables and 3 figures.

TITLE: The Casting of Cogged Wheels in Molds Lined With an Inserted Coating (Otlivka zubchatykh koles v formy, oblitsovannyye obolochkovymi vstavkami)

PERICDICAL: Liteynoye proizvodstvo, 1958, Nr 8, pp 19-20 (USSR)

ABSTRACT: The present method for producing cogged wheels leads to blisters in the cast due to the sand of the mold. In the article, a method is described in which an inserted coating is used in the molds. Wheels of 860 mm in diameter and a weight of 255 kg have been produced by this method. As a binding material for the coating, liquid glass is used. The inserted coatings are shown in Figure 1, b. Air holes are made for the escape of the gases formed during casting. After casting, the inserted coatings are removed by a pneumatic hammer. There were no casting defects in the finished products. There are 2 sets of diagrams and 1 table.

TITLE: Nonlinear theory of the TW tube allowing for relativistic effects

25

SOURCE: Radiotekhnika i elektronika, v. 10, no. 2, 1965, 302-311

TOPIC TAGS: TW tube, TW tube theory, relativistic TW tube

ABSTRACT: As electron-beam velocities at 40—50-kv accelerating potentials go very high, an allowance for relativistic effects becomes mandatory. J. D. Rowe's nonlinear equations (Proc. IRE, 1962, 50, 2, 204) are corrected, initial conditions are formulated, and a method for conversion of relativistic into non-relativistic equations is indicated for the case of a uniform helix. The set (4, 5, 6, 7) of nonlinear relativistic equations was reduced to a set of ordinary first-order differential equations, after which numerical evaluations were obtained by the Runge-Kutta method on a computer. These parameters were determined: phase

focusing, gain, optimal interaction length, deviation of the electron phase from its undisturbed value, efficiency of the relativistic TW tube, space-charge effect, and variation of electron relative velocity. It is found that the gain and efficiency increase with the electron velocity provided C remains constant. As the electron velocity rises, the effect of mutual electron disgregation drops considerably. "In conclusion, the authors wish to thank V. N. Lozhkin who carried out the programing and computing work." Orig. art. has: 8 figures, 32 formulas, and 1 table.
