TITLE: A Conference of Agricultural Vuzes of the Ukrainian SSR  
(Soveshchaniye sel'skokhozyaystvennykh vuzov Ukrainskoy SSR)

PERIODICAL: Vestnik vysshey shkoly, 1958, Nr 8, p 71 (USSR)

ABSTRACT: At the beginning of 1958, a conference of directors of 18 agricultural vuzes of the Ukrainian SSR took place at the Khar'kovskiy zootehnicheskiy institut (Khar'kov Zootechnical Institute). Its purpose was a further improvement in the training of agricultural specialists and primarily the practical training of students. Representatives of the following organizations participated at the conference: the TsK KPSS and the TsK KP Ukraine; the USSR and the UkrSSR Ministry of Agriculture; the USSR and UkrSSR Ministry of Higher Education; the Khar'kov obkom KPU and the Khar'kov Oblast Administration of Agriculture; Scientists of the Moscow Agricultural Academy imeni K.A. Timiryazev and a number of RSFSR agricultural institutes; Directors of institutes' experimental-training farms. Docent P.V. Salata, Director of the Belya Tserkov' Agricultural Institute, stated that the institute's work according to the new teaching plan has given positive results during the first year of its introduction. The new plans call for an

A Conference of Agricultural Vuzes of the Ukrainian SSR

increase in the practical training time in agronomy and zootechnics by 1½ times. In his report Professor, Doctor of Agricultural Sciences M.I. Kniga, Director of the Khar'kov Zootechnical Institute, showed the advantages of the new curriculum in combining the students' theoretical and practical training. V.V. Pozanenko, Member of the Board of the UkrSSR Ministry of Agriculture, pointed out that the agricultural institutes of the Republic have considerably expanded the training of those agricultural specialists who have been working at their job, while studying. Though the training of students at the correspondence faculties has improved in recent years, there are still many serious deficiencies. V.V. Syrovatchenko, Deputy Chief of the Main Administration of Agricultural Vuzes, USSR Ministry of Agriculture, told the conference about strengthening the material and training basis of the UkrSSR institutes.

AUTHOR:

Kotov, I.I.

TITLE:

A Geometrical Formation Method of Engineering Surface Forms

PERIODICAL:

Nauchnyye doklady vysshey shkoly, Mashinostroyeniye i priborostroyeniye, 1958, Nr 3, pp 108-113 (USSR)

ABSTRACT:

The analysis of key methods (klyuchevyye sposoby) of plotting engineering surface forms shows that many of them are special cases of a more general method, called "method of competing surfaces" (metod konkuriuyushchikh poverkhnostey) (I.I. Kotov, 1957). The theoretical principle of this method is the descriptive geometry of the four-dimensional space. The engineering application of this method is reduced to the consideration of a complex diagram of three projection fields  $\Pi_1$ ,  $\Pi_2$ ,  $\Pi_3$ , and each has its own coordinate system  $xy$ ,  $xz$  and  $xt$ . The surfaces  $\varphi_1^1$  ( $\Pi_1$ ,  $\Pi_3$ ) and  $\varphi_2^1$  ( $\Pi_2$ ,  $\Pi_3$ ), whose projections  $\varphi_3^1$  and  $\varphi_3^2$  coincide

Card 1/4

SOV/159-58-3-16/31

## A Geometrical Formation Method of Engineering Surface Forms

in the general field  $\text{II}_3$  of two complex diagrams ( $\text{II}_1$ ,  $\text{II}_3$ ), are called "competing surfaces" and are shown in figure 1. The non-coincident projections  $\Phi'$  and  $\Phi''$  of the competing surfaces  $\Phi'$  and  $\Phi''$ , being taken for the horizontal and frontal projection of some third surface, determine the surface  $\Phi'''$  which is called the derivative of  $\Phi'$  and  $\Phi''$ . Using the competing surfaces, surfaces may be constructed complying with some given requirements. The author cites such an example in which the construction is required of a smooth surface passing thru the plane curves  $p(p_1, p_2)$ ,  $q(q_1, q_2)$  and  $l(l_1, l_2)$  and presenting the cross-section shape of their planes parallel to the planes of curves  $p$  and  $q$ , as shown in figure 2. The author then considers a conoid and a cylindroid and establishes the equations for the surface  $\Phi'''$  which are compiled in table 1. The author cites the progression method (progressicheskiy sposob) of constructing a key, which will be known to a reader

Card 2/4

SOV/159-58-3-16/31

A Geometrical Formation Method of Engineering Surface Forms

acquainted with key methods of constructing surfaces (Popov, 1837, Burachev, 1872). The author further cites an equation for competing surfaces, selected in such a way, that they correspond to the beam method (luchevoy metod) of building a Pavlenko key (G. Ye. Pavlenko, 1935, 1948) or the trapezoidal method of constructing a key (Kirikkov, 1937, Vil'yams 1951, 1957). Based on his investigations, the author holds the following theorem for justified: "If two surfaces competing in regard to a single projection plane, with competing ribs, shall determine a smooth surface as a derivative, it is necessary and sufficient that a system of competing generatrixes may be constructed on these surfaces, located simultaneously on the smooth cylindrical surfaces to be projected, in regard to a double plane of the projections". The author arrives at the following conclusion: If it is necessary to resort to composite keys (sostavnyye klyuchi) for constructing the derivative of a surface,

Card 3/4

SOV/159-58-3-16/31

A Geometrical Fromation Method of Engineering Surface Forms

then for obtaining a smooth surface as a derivative, it is necessary to select competing surfaces with competing ribs (konkuriruyushchiye rebr'), which determine the boundaries of adjacent keys in a general composite key, in such a manner that they satisfy the conditions of the aforementioned theorem. There are 5 diagrams, 1 table and 7 Soviet references.

I.**TITLE:** Principles of constructing plane profiles**SOURCE:** IVUZ. Aviaticheskaya tekhnika, no. 1, 1949, 95-98**TOPIC TAGS:** curve fitting, profile generation, profile specification

**ABSTRACT:** The methods used for mathematically fitting a smooth profile through a number of points under several conditions are briefly discussed. Profile generation using a succession of direct arcs of second-degree curves, integral, empirical methods, and areas of ellipses is discussed briefly with a short program for each. The following references are cited for a complete description of the methods: (respective years): S. V. Khotinskaya (Spravochnik rukovodstvo po chernicheniu krov'yu vozduha v zaryazhenei s nemotornymi tekhnicheskimi zadachami, M., primenenie eto v svyazi s vtorogo sorvedeniya nemotornym tekhnicheskikh zadacham, M., 1955) (avtoref. i zhurn. prilozheniya, Sib. Matematika, 1963). A general discussion of all of the methods concludes that for a given number of constraints (consisting of points, slopes, tangents, etc.) one has to use a method with at least as many parameters to be able to find the analytical expression of the arcs. Examples of four, five, six, seven, and eight parameter curves which can be used are given respectively as

$$r = a \cos^2 \theta$$

$$r = a \theta + b$$

$$(x^2 + y^2 - a^2)^2 - b^2 = R^2 r = a(x^2 + y^2)$$

$$x^2 + y^2 - a^2 + b^2 = a$$

$$(x^2 + y^2) + (4a - b)(x^2 + y^2) + ax^2 + bxy + cy^2 = 0$$
