TITLE: Prospects of geodesy^{12,44,55} and cartography^{12,44,56} in 1966-1970

SOURCE: Geodeticky a kartograficky obzor, no. 5, 1965, 115-124.

TOPIC TAGS: geodesy, cartography, railway transportation, communication, construction

ABSTRACT:

The article discusses the long- and short-term plans in Czechoslovak geodesy and cartography and gives a detailed forecast of the long-term trends of development. Goals are proposed. The main requirements arise from construction, rail transportation, communications and the documentation of historical monuments. The requirements for numbers of technical personnel are stated.

TITLE: Quick Detection of Nickel by the Extraction Method (Ekspressnoye
opredeleniye Nikelya ekstraktionsnym metodom)

PERIODICAL: Zavodskaya Laboratoriya, 1957, Vol. 23, No. 1, pp. 19-20 (U.S.S.R.)

ABSTRACT: This process is based on the premise that the detection of nickel in hydroxide, oxide and metallic cobalt can be effected only after the removal of the cobalt. Cobalt is generally precipitated in the form of potassium cobaltinitrite. The final detection is done by the gravimetric or colorimetric method. The experimenters tried the method based on the difference in solubility of nickel dimethylglyoximate and cobalt in chloroform and found that the analysis took about 30 minutes. The analysis was begun by dissolving a batch of hydroxide or oxide of cobalt in a concentrated saline acid (metallic cobalt dissolved in nitric acid 1:1). The further steps of the analysis are stated, a table of results is prepared and it is found that the extraction method gives results close to those of the spectral method.

TITLE: Separation of Metals by the Exchange-Extraction Method
(Razdeleniye metallov metodom obmennoy ekstraktsii)

PERIODICAL: Doklady Akademii nauk SSSR, 1958, Vol 122, Nr 3, pp 445-447
(USSR)

ABSTRACT: An extraction in connection with an exchange reaction between metals is a very productive method of separation if these metals are in different phases: in an organic phase as salts and aliphatic acids and in an aqueous phase as salts of mineral acids (Ref 1). For this purpose saturated aliphatic acids with 5 and more carbon atoms were used. They fulfill a double function: a) they take part in the formation of the corresponding metallic salts (soaps), and b) they serve as solvents for these soaps being formed. Aliphatic acids are used most properly as solutions in an inactive solvent with a low specific weight. Directions for the preparation of such solutions are mentioned. The exchange reaction between the metals as mentioned earlier can be expressed by the following equation:

Card 1/3

Separation of Metals by the Exchange-Extraction Method SOV/20-122-3-34/57

¹M and ²M denote the corresponding metals, R - the organic residue of the aliphatic acid C_nH_{2n+1}COO', the indices org and aqu denote the organic and the aqueous phase. The equilibrium constant of the exchange reaction depends on the character of the exchanging metals, as was confirmed by the experiments. Metals with a small pH value ("acid" metals) mainly pass into the organic phase, metals with a high pH value, however, (more alkaline metals) into the aqueous phase. In many cases reaction (1) takes place almost completely (>99%), it may therefore be said that a metal is displaced from the organic phase by another metal. Separation of the metallic salts by means of the reaction mentioned in the title can be carried out from the aqueous as well as from the organic phase. In the first case (Fig 1) the aqueous phase which contains a mixture of salts of two metals is brought into contact with the organic phase in which a salt of an aliphatic acid of a stronger alkaline metal is contained. In the second case the organic phase which contains a mixture of salts of the aliphatic acids is brought into contact with the aqueous phase which contains a salt of a mineral acid of a

Card 2/3

Separation of Metals by the Exchange-Extraction Method SOV/20-122-3-34/57

weaker alkaline metal. Table 1 reveals the results of separation of metallic salts combined with sulfuric acid by means of the discussed method. As organic phase a solvent of industrial aliphatic acids of the fraction C₇ - C₉ (average molecular weight 141) in petroleum (400 g/liter) was used. Data on table 1 characterize a single exchange. By using an extraction column the degree of separation is considerably increased. If metals have similar properties reaction takes place incompletely. There are 2 figures, 1 table, and 1 reference, 1 of which is Soviet.

TOPIC TAGS: geodetic survey, automation, cartography

ABSTRACT: As in other branches of the Czechoslovak national economy, mechanization and automation is in the center of interest of the geodetic and cartographic circles. The present article outlines the present status and prospects for further development of surveying in Czechoslovakia and the present status of its mechanization and automation and presents a detailed analysis of the economic aspects of the geodetic service for the 1959-1963 period (instrumentation, transportation, composition of personnel, travel expenses, etc.). "Contribution to Differential States of Unconsciousness."

Prague, Ceskoslovenska Neurologie, Vol 29, No 4, Jul 66, pp 286-287

Abstract [Authors' English summary modified]: Comatous form of encephalitis at the onset of infectious mononucleosis is described. Correct diagnosis and effective treatment by steroids effected a recovery. The possibility of occurrence of this form of infectious mononucleosis in the differential diagnosis of states of unconsciousness is pointed out. 2 Western, 5 Czech references. "Rickettsia Sennetsui and the Etiology of Infectious Mononucleosis."

Prague, Casopis Lekaru Ceskych, Vol 105, No 36-37, 9 Sep 66, pp 975 - 981

Abstract [Authors' English summary modified]: By serum neutralization tests 38 sera from 17 patients with Rickettsia sennetsui were obtained; all but one gave negative results. Complement-fixation reaction was used to investigate 36 sera of 16 patients; a positive control of serum from guinea pigs immunized with R. sennetsui was obtained. R. sennetsui does not seem important in the etiology of infectious mononucleosis in Central Europe. 2 Tables, 63 1/1 Western, 4 Czech, 25 Japanese, 2 Hungarian, 1 Chinese refs. (Ms. rec. Nov 65).

TITLE: The elimination of brucellosis in cattle in Czechoslovakia

B

SOURCE: Ceskoslovenska epidemiologie, mikrobiologie, imunologie, v. 14, no. 4, 1965, 233-243

TOPIC TAGS: brucellosis, animal disease, undulant fever, veterinary medicine, animal disease, animal disease therapeutics, serum, vaccine, blood serum, vaccine

ABSTRACT: This article reports on new methods for detecting brucellosis in cattle in Czechoslovakia which were written into the new law concerning the veterinary services and also on the adoption of new methods designed to eliminate brucellosis from cattle in Czechoslovakia. The point of departure of this assanation campaign was the decree of the UV KSC (The Central Committee of the Communist Party of Czechoslovakia) of February, 1961 which set as the target date for the elimination of brucellosis in Czechoslovakia as somewhere before the year 1965. In Czechoslovakia there have been cases of brucellosis in cattle since the beginning of the century and diagnosis was based for the most part on serological tests. The first and most concrete measures

Card 1/2

L 20510-66

ACC NR: AP5021660

against this disease were taken after the nationalization of the veterinary services. At the beginning of the assanation campaign, the damage caused by brucellosis came to 100 million Czechoslovak crowns a year. Most of the cases of cattel brucellosis occur in the lowlands. From January 1, 1959 to January 1, 1965, the number of centers of incidence of this disease declined from 2,305 to 435. In the period from the summer of 1956 to 1964, 250 million Czechoslovak crowns were spent on the campaign to completely eradicate brucellosis. Orig. art. has: 4 figures and 2 tables.

AUTHOR: Koubek, Ladislav (Candidate of sciences)

TITLE: The ACT lc compiler for the Ural 2 computer

SOURCE: Aplikace matematiky, v. 9, no. 2, 1964, 110-130

TOPIC TAGS: automatic control, computer, Ural 2 computer, compiler, ACT lc compiler, program-making routine, LGP-30 computer

ABSTRACT: The ACT lc compiler is an attempt to automate programming for the high-speed Ural 2 computer with the use of a small LGP-30 auxiliary computer. The symbolic program is initially converted into a computer routine for the LGP-30 computer, debugged, and then once again converted in the LGP-30 into a computer routine for the Ural 2 computer. The machine language program and the corresponding routine of the Ural 2 computer are described. The practical experience gained with this method is also described. This method can also be applied for the cooperation of other computer pairs in addition to the LGP-30 and Ural 2. The compilation of both programs and debugging of the computer routine on the LGP-30 took 2 hours and 37 minutes of machine time. The actual computation took about 10 minutes. Author recommends that the calculation on the LGP-30 would last about 75 machine hours.
