Author : Krekule, Ivan
Inst :
Title : Methods of Testing and Measurements of Germanium Diodes and Transistors

Orig Pub : Slaboproudy obzor, 1958, 19, No 11, 729-732

Abstract : Problems are considered in the methodology of testing and measurement of new types of junction germanium diodes and transistors. The principal normally employed methods are given for testing for stability of these devices to mechanical and climatic action; an explanation is given of the influence of the latter on the tested specimens and the results of tests of low-power fused germanium transistors.

"Crosscorrelation and Cross-Spectral Analysis of EEG with Respect to Changes of Vigilance."

Prague, Activitas Nervosa Superior, Vol 8, No 2, Jun 66, pp 193-194

Abstract: Application of crosscorrelation functions and corresponding cross-spectral power density functions for detection of the common part of dependency between two simultaneous EEG recordings are discussed. EEG from electrodes symmetrically placed on the frontal cortices of rats were analyzed. In recordings of synchronized high voltage type (characterizing behavioral sleep) the crosscorrelation and the cross-spectral density are higher between these recordings than in desynchronized (aroused) activity. 1 Figure, no references. Submitted at the 4th Intradisciplinary Conf. of Exper. and Clin. Study of Higher Nerv. Functions at Mar. Lazne, 12-15 Oct 65. Article is in English.

TITLE: VIF oscillator

SOURCE: Slaboproudy obzor, v. 25, no. 7, 1964, 383-389

TOPIC TAGS: VIF oscillator, analog computer, frequency range, DC amplifier, MEDA computer

ABSTRACT: In view of the absence on the commercial market of a quality oscillator operating in the 0.01 to 20-30 cps range, a study has been undertaken to apply analog computer design principles in the construction of a generator of very slow sinusoidal and nonsinusoidal oscillations. A system reliable over the 0.01 to 10 cps range was built using three DC amplifiers. In contrast to mechanical oscillators, the new device secures precise frequency and output signal shape, smooth frequency change, and other [unspecified] advantages. A practical example of design application is given, together with a detailed evaluation of the effect of inaccuracies in various oscillator elements on the

Card 1/2

L 10908-65
ACCESSION NR: AP4041659

shape of the output signal. A method for determining terminal damping is described. The following output voltage characteristic results were obtained with amplifiers used in the MEDA computer: output I: $\cos(\omega t + \varphi)$; $0° < \varphi < 360°$ or triangular oscillations; output II: $\cos \omega t$ or rectangular or parabolic oscillations: amplitude of the output voltage: 0 to 20 v; accuracy of the amplitude of the sinusoidal and nonsinusoidal oscillations: ± 1 and $\pm 3\%$, respectively; frequency of the output voltage: 0.01 to 11 cycles; accuracy of frequency of sinusoidal and nonsinusoidal oscillations: ± 5 and $\pm 2\%$, respectively; permissible load for outputs I and II: 20 kohm or no load (for compensation measurements) and 10 kohm min, respectively; distortion of the sinusoidal characteristic: 0.5% max; accuracy of phase tuning: 1%; power supply: 220 v $\pm$ 5%; required power: 160 v-amp. Some details of circuit design are given. Orig. art. has: 25 formulas and 9 figures.

TITLE: On self-adjusting systems of automatic control

SOURCE: Vestnik protivovozdushnoy oborony, no. 11, 1964, 71-74

TOPIC TAGS: extremum control, controlled system, control system analysis

ABSTRACT: The author discusses electromechanical control systems having the capability of making internal adjustments triggered by external, variable conditions. In any case of environment-modified control systems it is necessary to define limits of environmental variations. The need for optimizing changes in the functional control process gives rise to separating the control system into two parts: the control part to transmit the flow of information about the object and its external environment, and the actuating part which generates the required action on the variable section of the regulator. The first part requires elements to analyze dynamic parameters of the system and the structure of input signals. Also required are computational devices for generating control signals for transmission to the second (actuating) part. The process-evaluating device solves for and identifies the dynamic properties of the object, and the device is given

Card 1/2

L 23935-65
ACCESSION NR: AP5002008

an optimizing capability through access to external environment. A flow chart is included showing the processing and mixing of information of the two types, object and external. The logical (computer element) must generate or store situation evaluation criteria. The computer receives quantified information of the types and transmits the optimal decision to the actuating element which is in turn series-linked with the regulator. Optimal strategy is obtained by an algorithm based upon dynamic programming; an example of the strategy determination procedure is taken from the context of finding extreme in a resonance contour generated by a simple circuit. TITLE: Aging and stabilization of the copolymer of ethylene with propylene

PERIODICAL: Plasticheskiye massy, no. 2, 1961, 12 - 16

TEXT: The authors studied samples of copolymers of ethylene with propylene of the type СЭП-15 (SEP-15). As compared with low-pressure polyethylene, such a copolymer shows a lower crystallizability, higher elasticity and, compared with high-pressure polyethylene, a higher thermal capacity and stability. There are no publications on aging and stabilization of SEP. Accelerated aging of the copolymer was achieved by rolling at 160°C for 4-6 hr. In this procedure, the authors observed a rapid decrease of the angular tangent of dielectric losses at 10^6 cycles/sec, and of the content of fraction insoluble in boiling xylene. T..ey examined the stabilizing effect of azomethines of the aromatic series with various substituents;

Card 1/3

89916

Aging and stabilization S/191/61/000/002/003/012
B118/B203

the azomethines were of the general formula  , where R = OH, NH_2; R' = OH, $N(CH_3)_2$, and were obtained by condensation of o-, p-aminophenols or o-, p-phenylene diamines with benzoic, p-dimethyl-amino benzoic, and salicylic acid aldehydes. When rolling the sample of SEP-15 for 6 hr, the relative elongation was ~4%. The tangent δ at 10^6 cycles/sec grows by the 1.15-fold, with 63% of fraction insoluble in boiling xylene being formed. The o- and p-oxy-anilines first used as stabilizers were only effective for 2 hr of rolling; phenylene diamines proved to be completely inactive. The azomethines obtained by condensation of unsubstituted aniline with benzoic and p-dimethyl-amino benzoic acid aldehyde, and from o- and m-oxy-aniline and benzoic acid aldehyde, showed no stabilizing effect. SEP kept its physicomechanical properties after 6 hr of rolling only in the presence of benzylal-p-oxy-aniline, and dissolved completely in boiling xylene. Among the phenylene diamine derivatives investigated, only benzylal-p-phenylene diamine stabilizes for 2 hr, and p-dimethyl-amino-benzylal-p-phenylene diamine for about 4 hr of rolling. Among the azomethines,

Card 2/3

89916

Aging and stabilization ... S/191/61/000/002/003/012
B118/B203

p-dimethyl-amino-benzylal-o-oxy-aniline and p-dimethyl-amino-benzylal-p-oxy-aniline showed the strongest stabilizing effect. These azomethines, however, give an intense color to samples of SEP-15, and, therefore, can only be used for colored copolymer goods. Azomethines from salicyl-aldehyde and oxy-anilines have an effect similar to that of compounds from p-dimethyl-amino benzaldehyde and oxy-anilines. Salicyl phenylene diamines are poorly efficient, and stabilize the properties of SEP-15 for 2 hr of rolling only. There are 5 figures, 1 table, and 5 Soviet-bloc references.

TITLE: Synthesis and investigation of antioxidative properties of some analogues of ionol(3,5-di-tert-butyl-4-oxitoluene).

SOURCE: Plasticheskiye massy, no. 7, 1963, 48-51

TOPIC TAGS: butyloxitoluene, antioxidant inhibitor, ethylene polymer, propylene polymer, thermooxidation.

ABSTRACT: A number of derivatives of 3,5-di-tert-butyl-4-oxitoluene have been synthesized and tested as possible antioxidant inhibitors. The antioxidant properties of these compounds were evaluated according to their ability to delay the oxidation of bone fat and by their ability to thermostabilize ethylene and propylene co-polymers. It was established that most of the synthesized derivatives, excluding 3,5-di-tert-butyl-4-oxibenzaldehyde and 3,5-di-tert-butyl-4-oxibenzylal-n-phenylenediamine, are effective inhibitors of the thermooxidation destruction processes of bone fat and ethylene and propylene co-polymer. Their activities in most cases exceed the activities of 3,5-di-tert-butyl-4-oxitoluene.

TITLE: Alkylaryl esters of pyrocatechin phosphorous acid - new stabilizers of polymers

SOURCE: Plasticheskiye massy#, no. 2, 1964, 37-39

TOPIC TAGS: pyrocatechin phosphorous acid, stabilizer, polymer, 4-(α-phenyl ethyl)-2-hydroxy phenyl dibutyl phosphite, 4-(α-phenyl ethyl)-1.2-phenylene phenyl phosphite, heat stabilizer, polyolefin, aging

ABSTRACT: Esters 4-(α-phenyl ethyl)-2-hydroxy phenyl dibutyl phosphite and 4-(α-phenyl ethyl)-1.2-phenylene phenyl phosphite were difficult to extract in pure form and were studied as stabilizers in a technical form. The effectiveness of alkylaryl esters of pyrocatechin phosphorous acid as heat stabilizers of polyolefins (polyethylene of low and high pressure and copolymer of ethylene with propylene) was evaluated as to rate of "aging" of unstabilized and

Card 1/2

ACCESSION NR: AP4012190

stabilized polymers. Many aromatic esters of pyrocatechin phosphorous acid are found to be effective thermostabilizers of high and low pressure polyethylene and the copolymer of ethylene with propylene. Physico-mechanical and dielectric properties of the polyolefins were also studied as a function of the heat-aging process. Orig. art. has: 1 Table

TITLE: Synthesis and antioxidant properties of sulfur- and nitrogen-bearing Ionol derivatives

SOURCE: AN SSSR. Bashkirskiy filial. Khimiya geraorganicheskikh soyedineniy, soderzhashchikhsya v neftyakh i nefteproduktakh, v. 7, 1964, 47-57

TOPIC TAGS: antioxidant, sulfur, nitrogen, thermooxidation/ Ionol

ABSTRACT: The retardation of oxidative degradation of hydrocarbon fuels, polyolefins, fats, and many synthetic and derived products was studied. In the present work the authors have synthesized and studied the antioxidant properties of a number of Ionol structural analogs, including azomethynes, hydrazones, amines, sulfides, and disulfides. The properties and compositions of these products are tabulated in the article. The treatment of Ionol with bromine and the condensation of 3,5-di-tert-butyl-4-oxybenzyl bromide with primary, secondary, and tertiary amines takes place with the formation of intermediate compounds of 2,6-

Card 1/2

L 43927-65

ACCESSION NR: AT5008624

di-tert-butyl-4-methylene quinone. Synthetic nitrogen- and sulfur-bearing structural analogs of Ionol are able to retard oxidation reactions not only during degeneration but during development. This results from a capacity to react with the primary radicals of the oxidized substance and also from a capacity to decompose the peroxide and to bind metallic ions of variable valence. Many of the synthesized substances cause effective retardation of thermooxidation of polyolefins and fats, inhibit radiation-chemical oxidation of fats, and some become effective additives for increasing the thermooxidizing stability of jet fuels. TITLE: A method for producing stabilizers for vinyl polymers. Class 39, No. 168877

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 5, 1965, 70

TOPIC TAGS: vinyl, polymer, stabilization

ABSTRACT: This Author Certificate presents a method for producing stabilizers for vinyl polymers by azomethyne derivatives from aldehydes and phenylenediamines. For obtaining effective and practicable stabilizers, aromatic aldehydes are used, such as benzoin, 2, 6-di-tert-butyl-n-oxybenzoin and others, and, for the phenylenediamine, ortho-, meta-, or paraphenylenediamine is used.
