Title : On the Mechanism of Compression of Current in a Fast and Powerful Gas Discharge.

Orig Pub : Atom. energiya, 1956, No 3, 81-83

Abstract : A study is made of the compression of a column of gas, carrying a current that increases rapidly with time. It is indicated that the fundamental role is played in this case by the magnetic forces that compress the gas (mutual attraction of parallel currents), charge distribution, and the inertia of the gas. The time variation of the radius of the gas column a is determined from the equation

$$\frac{d}{dt} \left(\frac{1}{3} \right) \pi \frac{da}{dt} = - \frac{I^2}{ac^2} + 2\pi a \bar{p}$$

where π is the mass of the gas per unit length of column, p the average gas pressure, and I the current. The coefficient $1/3$ must be introduced, because the mass of the gas is not concentrated in a circle of radius a , but is distributed over

Fizika plazmy i problema upravlyayemykh termoyadernykh reaktsiy, t.I.
(Plasma Physics and the Problem of Controlled Thermonuclear
Reactions, v. 1) [Moscow] Izd-vo AN SSSR, 1958. 300 p.
3,000 copies printed.

Resp. Ed.: Leontovich, M.A., Academician.

PURPOSE: This collection contains previously unpublished work of members of the Institut atomnoy energii (Institute of Atomic Energy) of the Academy of Sciences of the USSR. It is intended for scientists interested in this field.

COVERAGE: This book is the first of four volumes of a collection of articles on theoretical and experimental investigations of problems of controlled thermonuclear reactions and associated questions of plasma physics. The research reported on was conducted during 1951-1958 at the Institute of Atomic Energy. Only papers not previously

TITLE: Report on the Second All-Union Conference on Gas Electronics
PERIODICAL: Radiotekhnika i elektronika, 1959, Vol 4, Nr 8, pp 1359 - 1358 (USSR)

ABSTRACT: The conference was organized by the Ac.Sc. USSR, the Ministry of Higher Education and Moscow State University. It was opened by the chairman of the organizing committee, M.A. Leontovich, Academician. During the plenary sessions of the conference, a number of survey papers were delivered. L.A. Arizimovich read a paper on "Production of Ultra-high Temperatures in Plasma". A survey of the optical method of measurements was given in the papers by V.A. Abramov, A.G. Pevko, S. Brown of the Massachusetts Institute of Technology gave a survey of the high-frequency methods of the investigation of stationary and non-stationary plasma (see p 1344 in this issue of the journal).

Card1/13 M.V. Fedorenko read a paper entitled "Ionisation and Inelastic Scattering During Atomic Collisions", X
L.A. Sena and Ya.M. Kozin deal with "Elementary Processes of Determining the Motion of Ions in Gas".
A paper by Ye. Medvedev (Rumania) dealt with "The Role of Resonance Recharging in the Kinetics of Ions".
I.S. Skabulnikov considered the initial stages of the development of sparks (corona-leader, main channel and the final channel).
R.M. Elyzavildze gave a survey of the ignition processes of the discharges in highly rarified gases.
The mechanism of the breakdown of a high-vacuum gap was considered in the paper by G. G. Gerasimov, G. G. Gerasimov, L. Toth (USA) expounded the theory of the motion of electrons in a magnetic trap (see p 1316 of this journal).
Academician R. Kompf (Eastern Germany) described a number of experiments on non-stationary plasma conducted by himself.

M. Stobbeck (Eastern Germany) gave a generalized theory of plasma. The conference was divided into six sections. The first section was presided over by L.A. Sena and was concerned with the elementary processes in gas discharges. The following papers were read in this section:
M.K. Zhurav, "Transformation of Positive Ions into Negative Ions in Rarified Gases",
Ye. M. Pevko, with Yu. A. Zakhidov and D. M. Filipenko - "Resonance Recharging of Positive Ions During the Collision of Fast Atoms of Carbon and Hydrogen with the Molecules of Gases".

M.V. Zadoranko et al. - "Dissociation of Molecular Ions of Hydrogen During Collisions in Gas".
L.P. Flaks and Ya.S. Solov'ev - "Capture Cross-sections of Electrons in Multicharge Ions in Inert Gases".
E.M. Kuznetsov et al. - "Experimental Investigation of the Resonance Recharging in Certain Single-atom Gases and Small Vapours".
Observative Investigation of Inelastic Collisions of Atoms.

Card3/19 L.M. Volkova - "Effective Excitation Cross-sections of the Spectral Lines of Potassium and Arsenic".
Investigation of the Optical Functions of the Excitation Bands of a Negative System.
A.A. Vorobyev and A.G. Vlasov - Investigation of the Scattering of the Electrons in a Electron Chamber.
The second section was presided over by B.N. Klyavfel'd and was devoted to the problems of the electrical breakdown in rarified gases and in high vacuum. The following papers were read in this section:
G.I. Makar-Lisakov and Yu.A. Melititskiy - "Electrostatic Control of the Ignition of Glow-discharge Tubes" (see p 1274 of the journal).

S.V. Matveev et al. were concerned with the breakdown in a high-voltage mercury rectifier (see p 1278 of the journal).
I.G. Guseva "Ignition of the Discharge in Non-uniform Fields at low Gas Pressures" (see p 1260 of the journal).
A.S. Boboleva and B.N. Klyavfel'd - "The Discharge Phenomena Between a Point and a Plane at Gas Pressures of 10⁻³ - 1 mm Hg".

AUTHOR: Arsenin, V. V.; Leontovich, M. A.

TITLE: Beam instability of a rarified inhomogeneous plasma

SOURCE: AN BSSR. Doklady*, v. 156, no. 4, 1964, 766-769

TOPIC TAGS: plasma beam instability, plasma rim instability, rarified inhomogeneous plasma, plasma, magnetic field

ABSTRACT: The author investigates the instability connected with the plasma inhomogeneity at the rim of a beam of finite width, in a magnetic field. The starting point is a system of linearized kinetic equations with self-sufficient field for electrons and ions, and the Maxwell field equations; collisions are disregarded. For simplicity, the cases of ionic and electronic inhomogeneity are considered separately. It turns out that the rims of the beam are unstable with respect to short wavelength perturbations which do not appear in a homogeneous plasma, even if the beam velocity is smaller than the thermal velocity of the particles. The typical size of the inhomogeneity is taken to be comparable to the average Larmor ionic radius. The author is grateful to V. I. Kogan for

TITLE: Field of a charged filament moving uniformly in the vicinity of a system of perfectly conducting semiplanes

SOURCE: AN SSSR. Doklady*, v. 156, no. 4, 1964, 770-773

TOPIC TAGS: moving charged filament, electromagnetic emission, linear periodic conducting media, diffraction grating, waveguide

ABSTRACT: The radiation by charged particles in linear periodic media has been investigated earlier by several authors using approximation methods. The present author considers a problem of this kind which permits a rigorous solution. A uniformly charged filament is assumed to move with a constant speed parallel to a system of perfectly conducting semiplanes. The electromagnetic field is described by a Hertz' vector, consisting of the field of the charged filament moving in empty space and of that due to the boundary conditions on metallic plates. The total energy flux emitted by this "waveguide" is computed. The frequency of the radiation is determined essentially by the number of plates passed by the source in

TITLE: Diffusion in a solution near the critical point of vapor formation

SOURCE: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 49, no. 5, 1965, 1624-1630

TOPIC TAGS: critical point, vaporization, ~~thermal diffusion~~, Brownian motion, fluid diffusion, solution kinetics

ABSTRACT: An expression for the diffusion coefficient of dilute solutions near the critical point is derived and discussed on the basis of the general macroscopic diffusion equations and the thermodynamic solutions near the critical point. The description of the critical point used in this paper is based on the assumption that the free energy can be expanded in a power series in the neighborhood of the critical point. To check on the validity of the results in the

Card 1/2

L 15659-66

ACC NR: AP6000223

vicinity of the critical point, an analysis is made of the diffusion experiments and the results are compared with the derived equations. The connection between the results obtained on macroscopic diffusion of dilute solutions and Brownian motion of the individual particles is discussed. It is shown that the fact that the diffusion coefficient tends to zero at the critical point does not imply a reduction in the Brownian displacement of the particles, which is determined entirely by their mobility. The effect of viscosity is also discussed. Orig. art. has: 16 formulas.

AUTHOR: Leontovich, N.M.TITLE: The Asymptotic Expansion of Boundary Value Problems for Partial Differential Equations ¹⁶

PERIODICAL: Doklady Akademii nauk SSSR, 1960, Vol.131, No.4, pp.742-745.

TEXT: In the domain Q with the boundary Γ the author considers the problem

(1)
$$L_\varepsilon u \equiv \varepsilon^2 \Delta \Delta u + L_2 u = h$$

(2)
$$u|_\Gamma = 0$$

(3)
$$\Delta u|_\Gamma = 0,$$

where L_2 is an elliptic operator of second order:

(4)
$$L_2 = - \sum_{i,j=1}^n \frac{\partial}{\partial x_i} (a_{ij}(x) \frac{\partial}{\partial x_j}) + \sum_{i=1}^n b_i(x) \frac{\partial}{\partial x_i} + c(x), \quad x=(x_1, \dots, x_n).$$

It is assumed that the coefficients of the equation and the boundary of the domain have N derivatives; $h \in W_2^{2N+2}$.

For the approximate solution of the problem the author uses the method of

Title : ~~On the experimental destruction of deep sections of the brain~~
On the experimental destruction of deep sections of the brain

Periodical : Byul. eksp. biol. i med. 39, 74-77, Jan 1955

Abstract : The article describes an electrolytic method for the destruction of deep sections of the brain without damage to more superficial tissues. Author reports that the method was developed during the last century by the Russian scientist F. F. Gol'tsinger but was adopted by foreign scientists. The instrument uses a BAS-80 storage battery, a milliammeter and potentiometer to control the current. The inert lead cathod is attached to the animal's paw; the anode consists of a silver or platinum wire covered with bakelite lacquer or a glass tube. The end (0.5-2 mm) remains uncovered depending on the extent of the injury contemplated. It is best to use platinum wire which does not corrode as easily as silver. References: 5 USSR, 3 since 1940. Orig Pub : V abstr. sovrem. probl. genet. i perelivaniya krovi. 1958, No. 10, p. 103-111

Abstract : For obtaining a leukocyte mass (LM) from blood, prepared with a stabilizer (S) with the aid of ionogen, metaphase acids, sodium peroxide (S) and streptozin (ST). The method for the sedimentation of erythrocytes (R). I in a concentration of 0.1% and II in 0.6 - 0.8% contained a suspension of plasma with 70 - 90% leukocytes (L) about in 30 - 40 minutes. From 100 ml. of donor's blood, about

Card 1/3

2 billion L were obtained. I and II did not produce any toxic reactions in rabbits. Patients responded favorably toward transfusions of LM, prepared in this manner. The sedimentation of blood in a horizontal position with a subsequent change to a vertical position, increased the separation rate of R from 0.02% to 1%. For the maintenance of sterility, 0.02% of sodium salicylate and 0.02% of formalin was added to the solution of 0.6% solution of glucose increased the leukocyte viability. During the first few days, 91 - 97% of L maintained their usual characteristics. By preserving the L with fibrinogen-containing plasma with the addition of glucose to the serum, in colloidal and even saline solution, a non-specific clumping occurred

Card 2/3

b3

on the 3 - 7th day. The largest number of viable L was obtained by keeping them at 6 - 10°; at 16 - 20° L were rapidly destroyed. The neutrophils degenerated the earliest (on the 10th day about 85% of them remained); erythrocytes were the most viable. Phagocytic activity dropped sharply with the aging of the LM. The ability to agglutinate the vital stain was preserved 50% of the leukocytes. Anticoagulant did not affect the viability of the L. After removal of plasma the LM was placed into ampoules in the Central Institute of Blood Transfusion/ SU L. The transfusion was made from this ampoule by a stream with a reduced rate of speed. Moderate amounts of LM may be transfused with a syringe. The transfusion of LM within the first day produced no complications. -- A. D. Meloborova

alex The use of anticytolytic substances for the purpose of increasing the period of blood preservation. F. P. Vinograd-Finkel, V. A. Leontovich, and N. N. Abergauz. *Problemy Genetiki i Pervoinykh Krov 1, No. 1, 41-44 (1966).*
—The synthesized substances citrin (I), diprosin (II), gepin, EN, aminazine, and diquadril were investigated. Except for gepin, EN, all substances tested formed white cryst. powders, sol. in H₂O. They are antihistamines and can be safely administered intravenously in therapeutic doses. Tests for the effects of I and II on the hydrolytic power of plasmin and of serum esterase showed them to be enzyme inhibitors; they reduced the activities of plasmin and serum esterase by 60%, but had considerably less antiproteolytic properties. The addn. of anticytolytic substances to preserved blood delayed the destruction of the erythrocytes, seemingly because of their antienzymic effects as related to aseptic autolysis and also due to their favorable effect on the utilization of glucose by the erythrocytes. With the aid of such substances transfusion-blood was preserved under storage conditions for 60-80 days longer than heretofore. D. S. Levine

Title : Value of Sodium Citrate and of Some Other Electrolytes for the Preservation of Erythrocytes of Stored Blood.

Orig Pub : V sb.: Sovrem. probl. gematol. i perelivaniya krovi. Vyp. 32. M., Medgiz, 1956, 69-74.

Abstract : The increase of invisible hemolysis served as an indication of the destruction of erythrocytes (E); the hemolysis was determined colorimetrically. The preservation of E was examined in a physiological solution of NaCl, a balanced Tyrode solution, ultrafiltrated blood, in solutions which contain electrolytes of plasma and sodium citrate (I). I acted antihemolytically during addition to sugar -glucose and to the physiological solutions. The introduction of I into whole blood lengthened the period of its preservation,

Leontovič, E., and Maler, A. On a scheme determining the topological structure of the separation of trajectories. Dokl. Akad. Nauk SSSR (N.S.) 103 (1955), 557-560. (Russian)

11-5

2-E

Let (1) $\dot{x} = P(x, y), \dot{y} = Q(x, y)$ where P, Q are in $C^{(1)}$ in a closed bounded plane region G . The boundary of G is assumed to be a simple closed curve consisting of a finite number of trajectories of (1) and a finite number of arcs without contact. A "singular" trajectory or semi-trajectory is one which is orbitally unstable or which passes through the common end of a boundary arc without contact and an arc of a trajectory. (Cf. Leontovich and Mayer, C.R. (Dokl.) Acad. Sci. URSS (N.S.) 14 (1937), 251-254; and Markus, Trans. Amer. Math. Soc. 76 (1954), 127-148; MR 15, 704.) The critical points of (1) are to be isolated and only a finite number of singular curves are assumed to exist. Theorem: In order that the topological structure of two differential systems of the form (1) be the same it is necessary and sufficient that their schemes of separation by singular trajectories be isomorphic. The definitions of "topological equivalence" and "isomorphism" are not very explicit in the paper.

PERIODICAL Mat.Sbornik, n.Ser. 40, 179-224 (1956)
reviewed 5/1957

The present paper has been written down already in 1937, its results in the meantime often have been used by the authors and others (e.g. Pontrjagin) (Doklady Akad.Nauk 14, 247-250; *ibid.* 21, 427; *ibid.* 78, No.4); therefore this publication gives partially well-known and obsolete results. The authors investigate the rise of limit cycles at the transition from the system

$$\frac{dx}{dt} = P(x,y), \quad \frac{dy}{dt} = Q(x,y)$$

to the variated system

$$\frac{dx}{dt} = P(x,y)+p(x,y), \quad \frac{dy}{dt} = Q(x,y)+q(x,y),$$

where $p(x,y)$ and $q(x,y)$ are arbitrarily small additional terms with arbitrarily small derivatives up to the order $r \geq 1$. Here the functions

TITLE: On the Formation of Limit Cycles From a Separatrix Loop and
 From the Separatrix of the State of Equilibrium of the Type
 Saddle - Knot

PERIODICAL: Matematicheskiy sbornik, 1959, Vol 48, Nr 3, pp 335-376 (USSR)

ABSTRACT: The present paper written in 1937 is
 published for the first time. The results of the paper have
 already been used several times, e.g. [Ref 1,2,3,14].
 The paper is a completion to [Ref 4]. The authors consider
 the cases already mentioned in [Ref 4], where in the
 transition from the system

$$(D) \quad \frac{dx}{dt} = P(x,y) \quad , \quad \frac{dy}{dt} = Q(x,y)$$

to the arbitrarily adjacent system

$$(\tilde{D}) \quad \frac{dx}{dt} = P(x,y) + p(x,y) = \tilde{P}(x,y)$$

$$\frac{dy}{dt} = Q(x,y) + q(x,y) = \tilde{Q}(x,y)$$

On the Formation of Limit Cycles From a Separatrix Loop and From the Separatrix of the State of Equilibrium of the Type Saddle - Knot SOV/39-48-3-4/5

a limit cycle of the same class arises. Case I. The limit cycle arises from a separatrix loop. The authors give conditions which are sufficient for the stability (or instability) of the loop and simultaneously necessary for the formation of a unique stable (or instable) boundary cycle. Case II. The limit cycle arises from the separatrix of a state of equilibrium "saddle - knot" which tends to a saddle - knot for $t \rightarrow + \infty$ as well as for $t \rightarrow - \infty$ which, however, is a separatrix only for $t \rightarrow + \infty$ or only for $t \rightarrow - \infty$. It is stated that in this case always only one limit cycle is possible. Altogether there are seven theorems, eleven lemmata and several conclusions and remarks. - There are 4 figures, and 11 references, 8 of which are Soviet, 1 German, 1 French, and 1 Swedish.

TITLE: Certain Analogies Between Algebraic Curves and Algebraic Dynamic Systems on a Plane

PERIODICAL: Doklady Akademii nauk SSSR, 1959, Vol 129, Nr 3, pp 503-506 (USSR)

ABSTRACT: The author joins a paper of D.A.Gudkov [ref 1] on the algebraic curves

$$(1) \sum_{i+j+k=n} A_{ijk} x^i y^j = 0$$

with real coefficients. To every point of the coefficient space R_n there corresponds an algebraic curve C_n . Introducing in the R_n

a metric one obtains the δ -neighborhood of the C_n in the R_n .

In [Ref 1] it is shown that if C_n^0 in the point (x,y) has a

double point, then the neighboring curves C_n in the neighborhood

of (x,y) have a certain behavior. The author of the present paper considers algebraic dynamic systems

$$(D_n) \quad \frac{dx}{dt} = P(x,y) = \sum A_{ijk} x^i y^j, \quad \frac{dy}{dt} = Q(x,y) = \sum B_{ijk} x^i y^k$$

TITLE: ¹⁶ Dynamic systems of the first order of refinement in the plane

SOURCE: Matematicheskiy sbornik, v. 68, no. 3, 1965, 328-372

TOPIC TAGS: dynamic system, system analysis, dynamic behavior, trajectory analysis

ABSTRACT: The class of simple refined systems called "systems of the first order of refinement" is considered. Systems of this type are found among the systems in the plane, that is, systems of the form

$$\frac{dx}{dt} = P(x, y), \quad \frac{dy}{dt} = Q(x, y),$$

where x and y are the Cartesian coordinates in the plane. The concept of the "coarseness" of dynamic systems is defined in terms of the variables and vector spaces involved. Conditions necessary for a system of the first order of refinement are established. Three conditions are stated; the violation of any one of these three conditions is necessary for the given system to be of the first order of refinement. The discussions are based on the theorem of "minor variation of the solution and derivatives from the solution according to initial values from the variation of the righthand side" (see A. A. Andronov and Ye. A. Leontovich (Rozhdeniye predel'nykh

tsiklov iz negrubogo fokusa ili tsentra i ot negrubogo predel'nogo tsikla, Matem. sb., 40 (82) (1956), 179 - 224)). Fifteen theorems and several lemmas are stated and proved. The conditions established in these theorems are the first order of refinement conditions and are termed the Γ conditions. The proof that the Γ conditions are also sufficient conditions for a system of the first order of refinement is left for subsequent publication. Orig. art. has: 17 equations.

ABS. JOUR. : RZhBiol., No. 3, 1959, No. 11249

AUTHOR : Leontovyc, R.
INST. : ~~Research Institute of Forest Pathology and Plant Protection~~

TITLE : Infection of Individual Poplar Clones by the Fungus *Melampsora alii-populina* in the Breeding Nursery of Gabchikovo in 1956.

ORIG. PUB. : Lesn. casop., 1956, 4, No. 1, 30-45.

ABSTRACT : Most resistant to the poplar leaf rust proved to be: *Populus italia* 214, *P. italia* 109, *P. italia* 501, *P. marilandica*, *P. nigra* v. *typica*, *P. fremontii* and *P. veluticarpa*, and the most susceptible - *P. chevestina*, *P. regenerata*, *P. robusta*, *P. vernicarbans*, *P. bachelieri*. The outbreak of the disease was favored by the injuries of the trees caused by frosts. Measures for the control of the disease: elimination of the intermediate hosts of the fungus, the use of appropriate fungicides, breeding of poplars resistant to the disease. Observations on this type of poplar disease were not previously conducted in Czechoslovakia. — Ye. A. Parshina
