2740. LESIŃSKI J. and HOFFMAN B. Klin. Dermatol. A.M., Białystok. "Próba zastosowania zjawiska immunologicznego przylegania w serodiagnostyce killy. Treponema pallidum immune adherence test in sero-diagnosis of syphilis" POL. TYG. LEK. 1956, 11/48 (2037-2040)
- Treponema pallidum immune adherence test (TPIA) according to Nelson's technique with slight modifications made by the authors, was performed with 150 human sera. In untreated patients the test was positive in 14 of 20 cases of primary, in 16 of 17 cases of secondary, in 11 of 13 cases of latent, and in all 7 tested cases of late symptomatic syphilis. The test was positive in 20 of 40 cases of treated syphilis. The specificity of the TPIA was proved on 30 healthy students and on 23 persons with diseases other than syphilis. In the former group all reactions were negative, in the latter 2 reactions were doubtful. The authors express their opinion that the wider application of TPIA depends on improvement of the technique.

TOPIC TAGS: oscilloscope, time signal, tripper circuit, cathode ray tube

ABSTRACT: Certain problems are discussed which are associated with the design, structure and operation of electronic synchronization systems and tripping devices required when it is desired to record currents in the region of their passage through zero value, and recovery voltages. A type of each device and their specifications are discussed, in particular the time base tripping . device in recording single and recurrent transients in which case it operates at a speed of 5 s/cm. TITLE: Measurement of the frequency of free oscillations of low voltage circuits with the aid of a universal recovery voltage indicator of low output capacitance

SOURCE: Pomiary, automatyka, kontrola, no. 10, 1965, 441-442

TOPIC TAGS: electric measurement, electric measuring instrument, free oscillation

ABSTRACT: The article describes a universal recovery voltage indicator designed and built at the Department of Electrical Apparatus of the Lodz Polytechnical Institute which can be used practically without restrictions for determining the frequency and damping of free oscillations of low voltage circuits or their elements. The formation stages of the current pulses are described. In the case where an oscilloscope with a voltage divider of less than 12 pF capacitance is used to record the course of the voltage of the free oscillations of circuits of less than 300 pF capacitance, the effect of the capacitance of the divider and of the indicator may be neglected and the measurement error will not exceed 5%. Orig. art. has 5 figures, 2 formulas and 1 table.

point, 48-49°). Similarly, from 1-nitro-n-hexane, there is obtained 2-nitro-2-n-amylpropanediol-1,3 (yield, 60%; melting point, 53-54°). During the heating (about 100° for 4 hours) of equimolar quantities of II by 30% NCHO and 25% NH₄OH, there are obtained 5-nitro-n-butyltetrahydro-1,3-oxazine (III) (liquid), and the hydrochloride of III (yield, 15%; melting point, 172-174°). III is produced also (yield of the hydrochloride is 10%) by boiling for 3 hours 0.1 mol of I, 0.3 mol of 30% HCHO and 0.1 mol of 25% NH₄OH; the picrate's melting point is 150-151°. The hydrochloride of III, during boiling with concentrated HCl in 80% alcohol, hydrolyzes, separating HCHO and forming 2-nitro-2-oxymethylhexylamine (IV). The action of 30% HCHO on IV (the heating is over

TRANSLATION: Since 1952, the Geodesy Department of the Kaunas Polytechnical Institute has incorporated a program into its scientific and research activities for studying the vertical motion of the earth's crust in the territory of the Lithuanian SSR. A project has been worked out for repeated high-precision leveling. It is planned to establish a polygon for conducting systematic geodetic and geophysical observations for the purpose of studying short-period movements of the earth's crust. The question is raised regarding the necessity of concentrating in the Baltic Neotectonic Commission the data obtained from observations made at all the leveling posts located on the shores of the Baltic Sea.

TOPIC TAGS: earth crust, leveling, polygon

ABSTRACT: In 1963, repeated first-class leveling began for investigating the vertical movement of the Earth's crust in Lithuania. The plan for these operations provides for a number of closed polygons with a perimeter of about 400 km and plotting them to the leveling points on the Baltic shore. The primary polygons are those in the western part of Lithuania. In 1963-1964, a line was run between Pagegyay, Kalypeda, Palanga, Liepaya and the depth gages of Klaypeda, Shventoya, and Liepaya were tied to it. [Translation of abstract]

~~geodetic project, EARTH CRUST, TECTONICS / LITHUANIA~~

ABSTRACT: In 1963, the geodesy department of the Kaunas Polytechnical institute started the laying out of I class leveling net for a study of vertical movements of the earth crust, this work being repetitive relative to some former levelings in Lithuania. The first class leveling project foresees establishment of closed polygons with approximately a 400 km perimeter, the tying-in of the equalizing points on the Baltic shore and a connection to the net of repeated leveling PNR. In line with the plan of work, in which the Institute of agricultural construction planning shall participate, first priority is with the polygons of Western Lithuania. In 1963-64, the line Pagegyay-Klapeda-Lupaya has been laid out, and the benchmarks of Klapeda, Shventoya and Lipaya have been assigned to this line. [Translation of abstract].

ABSTRACT: The authors consider the characteristics of variation in the number of excited quasineuronal elements in a network consisting of 512 such elements communicating with each other through a random system of stimulating interconnections. An analysis of the spontaneous activity of the network shows a periodic variation in the number of excited elements in the form of undamped oscillations when the states of the elements and the interconnections are determined by uniformly distributed random numbers. The period of the steady-state natural oscillations of the network is exactly equal to the refracting period of the quasineurons if it is assumed that the duration of the refracting period for all quasineurons is identical. If all parameters of the network

Cord 1/2

L 24502-66

ACC NR: AP6004537

are constant, a variation in the initial degree of excitation may change the form of the steady-state oscillations of the system. The spontaneous activity of the network is essentially different from the operation of a network subjected to periodic excitation from an external source. The periodic oscillations generated in the network in this case have a complex shape which depends on the relationship between the recurrence frequency of the excitation and the refracting period of the quasineurons. If rhythmic spontaneous oscillations are set up in the network, their period is independent of the number of interconnections and the threshold value of the quasineurons. When only some of the quasineurons are subjected to periodic excitation, there is a transition process in the network followed by periodic oscillations which are a superposition of the excitation frequency on the frequencies of the normal modes in the system. Prior to Tanning of the "rindbaks" Leather.

ORIG. PUB. : Kozarstvi, 1958, 2, No 4, 101-103

ABSTRACT : Based on the review of literature, a possibility of shortening ~~of~~ the production cycle (dressing-tanning step) involved in the manufacture of "rindbaks" leather has been outlined. It is predicted on the utilization of the existing equipment. The above simplification is attained, on one hand, through the combination of separate operations and through the shortening of their duration, and on the other hand, through the substitution of stamping materials. Industrial Proteins.

TITLE: Simple method for regulating water level in an open vessel during overflow of the water

SOURCE: Chemicke zvesti, no. 5, 1965, 422-423

TOPIC TAGS: storage tank, flow regulation, flow regulator, valve

ABSTRACT: The method investigated and recommended by the author is based on a valve regulated by a float. Details of the components of the installation that is suitable for laboratory work are presented. "O. Gelet is thanked for constructing the valves and E. Jablonska for illustrating them." Orig. art. has: 3 figures.

TITLE: Kinetic study of the mechanism of reaction of bromoacetic acid and Alpha-bromopropionic acid with some basic reactants

SOURCE: Chemicke zvesti, no. 5, 1965, 339-352

TOPIC TAGS: brominated organic compound, acetic acid, ion, bromine, solution concentration, anion, reaction mechanism, chemical kinetics

ABSTRACT: Author's summary: Reaction of anions of phosphate buffer, anions of glycolic acid, and anions of lactic acid with anions of bromoacetic acid, and of alpha-bromopropionic acid was investigated. The mechanism of hydrolysis of these acids, and the restraining effect of the bromine ion upon the rate of hydrolysis in a buffered medium at pH around 7 is discussed. The reactions were measured by methods of polarography. The rates of reactions that were found show that the catalytic influences

Card 1/2

L 00165-66
ACCESSION NR: AP5025524

of the anions are small, and are noticeable only at higher concentrations of the anions. The restraining effect of the Br ion is shown strongly in higher concentrations of this ion.

Orig. art. has: 19 formulas, 8 graphs and 1 table.

TITLE:

The Crystals of Quartz in Coals (Kristally kvartsa v ugliakh)

PERIODICAL:

Doklady Akademii nauk SSSR, 1959, Vol 124, Nr 3 pp 575 577
(USSR)

ABSTRACT:

The mineral impurities of authigenic origin contain small regular quartz crystals. Such crystals are found in the tertiary coals of the Dnepropetrovsk lignite field and in the mineral coal deposits of the lower carboniferous formation of the Donbass. In brown coal the quartz crystal content may be 30% and more of the weight of the coal. The coal and the places where it is found are described in detail. New and smaller crystals grow on some of the crystals in form of rhombchedra developing immediately on the prism surfaces. This is apparently a result of the second generation. It was found by spectral analysis that quartz contains impurities of Ti, Cd, Zr, Al, Ca and Fe. Thermal analysis of the crystals shows that the endothermic effect which is typical of quartz (corresponding to transition of the α -quartz into the β -modification at 573°) is distinctly marked. The exothermic effects at 335 and 446°

Card 1/3

The Crystals of Quartz in Coals

SOV/20-124-3-22/67

may apparently be explained by the existence of impurities. In the deposits of the lower carboniferous quartz crystals are found in coal-like minerals. These minerals are characterized by their cigar-like shape, which is unfrequently found. The cross section of these cigar-shaped crystals is a regular hexagon. All these crystals have dark regions in their central part, which are regular polyhedra and are filled with organic substances. The above described quartz crystals were formed in the course of exogenic processes under thermodynamical conditions such as exist on the surface of the earth. The here discussed experimental data lead to the following conclusions: 1) The quartz crystals in the coals are syngenetic formations. 2) Organic substances promote the formation and growth of aqueous-transparent quartz crystals if they are sure to be accessible to the solution. 3) The organic medium warranted favorable conditions for the concentration of silicic acid solutions and for their oversaturation. This is also indicated as being probable by the large number of crystallization centers in the intermediate layer. 4) Temperature conditions and pressure are probably regulated by biochemical processes and correspond to the conditions prevailing on the surface of

PHASE I BOOK EXPLOITATION POL/2379

Soltyk, Witold, Master of Engineering, and Kazimierz Leski, Master of Engineering

Samoloty komunikacyjne (Transport Airplanes) Warszawa, Państwowe Wydawnictwa Techniczne, 1958. 117 p. (Series: Najnowsze konstrukcje lotnicze) Errata slip inserted. 4,135 copies printed.

Reviewer: Stanisław Madeyski, Master of Engineering; Ed. of Publishing House: Eugeniusz Tratkiewicz, Master of Engineering; Tech. Ed.: Bożenna Radzikowska.

PURPOSE: This book is intended for civil aviation personnel, workers in the aviation industry, students of technical schools, high school students, and readers interested in aviation.

COVERAGE: The authors give a brief historical outline of the development of transport aviation and describe in detail modern equipment for passenger and freight air transportation. They describe short, medium, and long range aircraft, tourist air-

Card 1/4

Transport Airplanes

POL/2379

craft and helicopters, and designers' efforts to achieve greater speeds, longer ranges, and more safety and comfort.

AUTHOR: Leski, Kazimierz, Master of Science, Engineer

TITLE: Hydrofoil - the future of communication on water

PERIODICAL: Horyzonty Techniki, no. 2, 1963, 6-9

TEXT: A brief review is given of the history, method of operation and capabilities and advantages of this form of transport, in view of their development in USA and the USSR and the current interest in this problem at Politechnika Gdańsk (Gdańsk Polytechnic). Hydrofoils are classified into (1) passenger-carrying types on inland waters and on off-shore areas of seas, (2) miscellaneous types (not discussed), and (3) sea-going types, now in the process of development. Some specifications of Soviet and Western hydrofoils are tabulated. Group 1 is now being developed largely in the direction of reducing costs and increasing performance and of reducing the depth of immersion while in motion. Further developments of all types of hydrofoils are thought desirable and are envisaged in the near future. There are 6 figures and 4 tables.

2322. QUALITY OF FEED WATER IN THERMAL CIRCUIT OF CONDENSING POWER STATION. Leskiewicz, H. (Energetika (Power, Poland), 1953, vol. 7, (3), 129-132). A simple formula is derived for the quantity of boiler feed water required to maintain the concentration of impurities (dry content) below a maximum in a nominally closed cycle system. The amount of feed water needed depends on the amount of steam generated, dry content of feed water and the maximum permitted in the boiler, also on quantities of water leakages along the circuit and their dry content.

TITLE: Correction of dynamic properties of a pressure stabilizer by means of a cascade damper

PERIODICAL: Archiwum automatyki i telemechaniki, v. 7, no. 1-2,
1962, 119 - 129

TEXT: The behaviour of the pressure in steady and unsteady states is studied in a hydraulic circuit using pressure stabilizers fed from a constant delivery pump with variable oil demand for automatic control devices. The analysis pertaining to a cascade damper outlet stabilizer is presented in dimensionless terms and applies also to an ordinary outlet stabilizer when treated as a particular case. The dynamic properties of these two types of stabilizers are compared. It is assumed that the operation performed on the border between the damped and aperiodic vibrations may be considered as an extreme requirement of the dynamic quality of a stabilizer. A dimensionless triple diagram is obtained which enables the choice of a proper stabilizer for given static requirements and to determine Card 1/2

✓ B

Correction of dynamic properties of ... D265/D308
