TITLE: Transistorized magnetic inverter with frequency control in equipment for magnetic recording and multiplexing of seismic signals

SOURCE: Ref. zh. Geofizika, Abs. 12D102

REF SOURCE: Tr. Kuybyshevsk. n.-i. in-t neft, prom-sti, vyp. 31, 1965, 232-242

TOPIC TAGS: geophysic instrument, transistorized magnetic inverter, seismic prospecting, recording, signal multiplexing, multiplex

ABSTRACT: Transistorized magnetic inverters with frequency controlled by the magnetization of intermediate transformers can be successfully used in equipment for the seismic logging surveys of wells as a frequency modulator for multiplexing the communication channel, as well as in an atomic and remote control systems of petroleum equipment. Analytical expressions for the basic characteristics of low-speed transistorized magnetic inverters are presented. Computational and experimental data are compared. A. Lozinskaya. TITLE: Simulating systems controlling high-inertia plants on an "Analog"
pneumatic computer

SOURCE: Priborostroyeniye, no. 11, 1965, 22-23

TOPIC TAGS: computer simulation, pneumatic simulation

ABSTRACT: The general features of a new "Analog" pneumatic real-time simulator built by the "Teploavtomat" factory (Khar'kov) are given. The simulator capable of solving third-order differential equations with coefficients within 10—1200 sec is intended for studying automatic-control systems having

Card 1/2

Z

L 8787-66
ACC NR: AP5028033

time constant up to 20 min; it uses a standard signal pressure of 0.2–1 kg/cm². The simulator accuracy is seen from this data: error in solving sixth-order equations with 300 sec time constant is 3–5%; same, with 300–1200 sec, is 6–10%. An example of practical application of the simulator for optimization of a catalytic reactor is cited; deviated by 50% from the desirable point, the system, intended for carrying out an exothermic reaction in a suspended layer of catalyst, found the optimum in 2300–2300 sec (twice as long as the plant's time constant). TOPIC TAGS: gas turbine, cooling, turbine stage, liquid metal, liquid metal cooling

ABSTRACT: A method of cooling the inlet-stage vanes of a gas turbine by liquid metal or molten salt is introduced. In the operation, the cooling medium, after its exit from the thermally stressed vanes of the inlet stage, is transferred to another stage whose vanes are exposed to lower temperatures of the expanding gases, e.g. from the first into the fourth turbine stage.

"The Activity of Peroral Pancreatin Preparations."

Prague, Ceskoslovenska Farmacie, Vol 16, No 2, Feb 67, pp 79-85

Abstract /Authors' English summary modified/ : Peroral pancreatin preparations have differing activities because of inaccurate dosing in their production step, and because of the varying quality of the protective enterosolvent layer. The method suggested for the determination of their activity in the 3rd ed. of the Czechoslovak Pharmacopoeia is described. A study of the decrease of activity of coated tablets in simulated gastric juice showed that up to 50% decrease in their activity can be caused by imperfect protection of the core. The protective layer should be completely acid resistant. 3 Figures, 3 Tables, 6 Western, 19 Czech references.

Title : Remark on the Destruction of the Latent Image of Desensitized Photographic Emulsions by White Light.

Orig Pub : Ceskosl. casop. fys., 1958, 8, No 1, 89-92

Abstract : An investigation was made of the effect of additional exposure (AE) by white or spectrally-decomposed light on the undeveloped AgCl and AgCl-AgBr emulsions, exposed previously with white light through a sensitometric wedge and then subject to desensitization by dyes (pinacyanol green pinacyanol yellow, and phenosafranin under various conditions of bathing -- concentrations and durations. It is established that additional exposure with white light can cause a reduction or an increase in the density of all or part of the fields of sensitogram, depending on the ratio of the principal exposure in the additional exposure. The limiting ratio,

"[Tick-Borne Encephalitis. Planning Studies.] B. Methodical Data About the Applicability of Neutralization Tests in vitro for Field Trials with the Tick-Borne Encephalitis Virus."

Bratislava, Biologické Práce, Vol 8, No 9, 1962; pp 11-20.

Abstract [English summary modified]: Detailed description of 3 years' studies of method of isolation, passaging in HeLa cells with plaque observation to determine antibody levels, titrate virus. Long conservation of sera increased their toxicity to tissue culture cells. Immunologic results agreed with those of intracerebral inoculations in mice.
