Volume changes of plasticized concretes. R. L. MAILYAN.  
*Gidrotex. Statek*, 22 [7] 23-24 (1963). When hydrophobic and  
hydrophilic surface-active substances were added to concretes of  
equal plasticity, they decreased the total shrinkage noticeably  
despite the fact that it showed an increase during the first days  
of hardening, particularly for hydrophilic substances. The final  
shrinkage of concrete decreased as the amount of admixture in-  
creased. The admixtures increased the swelling of the concrete  
in water. B.Z.K.

"Examination of Workmen Exposed to Electromagnetic Waves of One Meter and Longer Length in the Region of West Bohemia."

Prague, Pracovni Lekarstvi, Vol 18, No 3, Apr 66, pp 100 - 106

Abstract [Authors' English summary modified]: 68 workmen employed in areas of electromagnetic fields with frequencies of 2.4 to 2.4 cycles, and wave length: 3.5 to 30 meters were investigated. 52 were subjected to an uninterrupted field, and 16 to a polyfrequency interrupted field. 22% in the first, and 50% in the second group were influenced by the field. Only in one a serious disease resulted; most suffered simply from headache, fatigue, vegetative symptoms and lack of coordination of the cortex and mesodiencephalic CNS functions. 6 Figures, 2 Tables, 4 Western, 14 Czech references. Title : Gravitation and Heat Propagation  
Orig Pub : Rev. phys. Acad. RFR, 1958, 3, N 1, 17-20

Abstract : It is proposed that the mass of any body can be subdivided into a constant mass, measured at zero temperature of the investigated body, and a variable mass, which depends on the temperature and which is equal to the internal energy, divided by the square of the velocity of light. Starting with this premise, the author establishes on the basis of universal thermodynamic relations the dependence of the weight of a

Orig Pub. : II-a Conf Tehn-Stiint a Ind Usoare Piele-Caucius-  
Sticla [Bucuresti], ASIT, 52-59 (1957)  
Abstract : The author discusses the theoretical foundations  
of formaldehyde tannage and of combination tan-  
nage using formaldehyde (I). The I-chrome-vege-  
table tanning process for sole leather is dis-  
cussed; the process makes it possible to cut pro-  
cess time and also permits the utilization of  
lower grade Rumanian tannins in the vegetable tan-  
ning step. The swelling of the skins during lim-  
ing is held within narrow limits. The skins are  
then subjected to complete deliming, treated with  
3% I (pH 7.0-7.2, temperature 18-20°), followed  
by mild pickling (solution 100%, NaCl 6%, techni-  
cal HCl 1.8%), chrome tanning with a reduced

TITLE: Welding of thick sheets by the slag bath technique

SOURCE: Constructia de masini, no. 10, 1964, 557-560

TOPIC TAGS: sheet metal, electroslag welding, steel, butt welding, metal welding

ABSTRACT: [Authors' English summary modified]: Describes a series of tests performed at the "23 August" Plants of Bucharest to determine optimal parameters for the slag-bath welding of sheets of various thicknesses. Among the factors tested were the composition of the bath, the temperature, and the time of the operation. It was concluded that the technique is especially suitable for the butt welding and T-welding of 0142 steel parts of 50 to 55 millimeter thickness, and that a normalizing thermic treatment is advisable.
