Rapid polarographic determination of impurities in lead.
J. F. Major, *Koblenz Lab* 10, 323-5 (1958); *Anal. Chem.* 30, No. 2, Abstr. No. 77 (1958). The proposed procedure for detg. impurities in Pb is faster than the conventional PbO₂ method and much more accurate, especially for small quantities of impurities. Pb is sent electrolytically from a HNO₃ soln. in the form of PbO₂ and the impurities in the remaining soln. are detd. by the customary polarographic methods. Only 4-5 hrs are required for the detn. of the impurities, thereby considerable time is saved.

The possibility of replacement of Acacia gum in sugar-coated tablets. M. Kudera and K. Macek (Výzkumný ústav léčivých rostlin, Prague). *Farmacia* 24, 81-2 (1955).
Acacia gum can be replaced in the prepn. of sugar-coated tablets by cherrytree-gum. For this purpose hydrolysis is necessary as the gum is not sufficiently sol. in H₂O. One part of the gum has to be mixed with 9 parts of H₂O and autoclaved at 2.5 atm. for an hr. The colloid soln. obtained can also be used as an emulsifier. Gum tragacanth can be used for the same purpose after hydrolysis. K. Macek

"Cured Pannmyelopathy Which Developed During Hydantoin Treatment."

Budapest, Orvosi Hetilap, Vol 104, No 38, 22 Sep 63, pages 1803-1805.

Abstract: [Authors' Hungarian summary] The authors report a case of severe pannmyelopathy which was caused by methyl-phenyl-ethyl- and diphenyl-hydantoin. The disease was cured after extensive and prolonged treatment. The literature data on the subject are summarized briefly and the pathomechanism of the development of acute pannmyelopathy are discussed. The case supports the view that the blood of patients who receive hydantoin for a prolonged period should be tested not less than at monthly intervals. 10 Hungarian, 0 Western references.

TITLE Membrane pump

PERIODICAL Referativnyy zhurnal, otdel'nyy vypusk. Kompresory i kholodil'naya tekhnika. no. 7
1962, 15, abstract 34.7.111, Czech. patent, class 59a, 35, no 94452 March 15, 1960

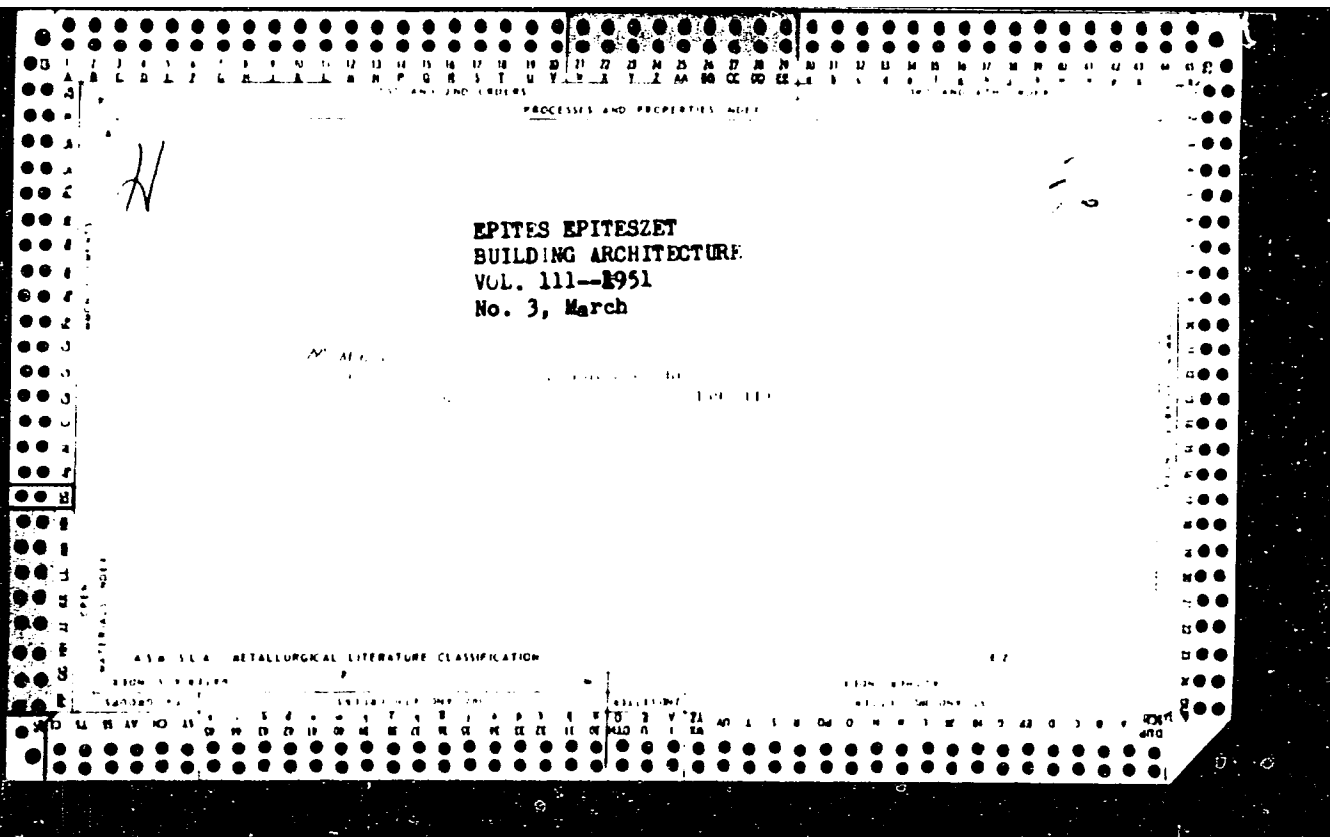

TEXT The proposed membrane pump is driven by an electromagnet and is distinguished by its noiseless action. To the pump body is attached an electromagnet, inside of which there is an induction coil. On its axis is situated a core, consisting of two parts, separated by an air gap. One part is attached to the membrane and the other moves in an aperture of the electromagnet.

Malá radiotechnika (Concise Radio Engineering Handbook) 2nd ed. Praha, Státní nakladatelství technické literatury, 1959. 408 p. (Series: Elektrotechnická minima, svazek 27) 10,205 copies printed.

Tech. Ed.: Vladislav Lácina; Chief Ed.: František Kašpar, Engineer, Doctor;
Resp. Ed.: Svatoslav Neuzil.

PURPOSE: This handbook is intended for the general reader having elementary knowledge of principles of electrical engineering.

COVERAGE: The book gives a summary of the most important information on radio engineering. It discusses basic radio circuits and their components, devices employing these circuits, and various methods of radio communication. Finally, the book describes the basic measuring instruments used in radio engineering. No personalities are mentioned. There are 16 references, all Czech (4 of these are translations).

Magyar Építéstudományi Társaság). Vol. 3, 1954, No. 1, pp. 18-24,
12 figs.

Based on practical experiences gained in Hungary from the points of view of economy, technology, lighting and ventilation the author suggests for consideration the following main points: (1) precast shell roof elements with rigid reinforced crane girders requiring a minimum quantity of material. Before this can be put to practical use the promising experiments on 3 x 9 elements must be complemented. These elements, together with their insulating layers, act as heat shield elements. (2) Prefabricated arch structures, widely used in all countries. Abundant experiences are available in this field. (3) The prefabrication of large units with truss structures, reducing the number of precast types and junctions. The required quantity of concrete is higher, that of steel is less than in arch structures. (4) Steel or combined steel structures the columns of which are made almost exclusively of reinforced concrete. In conclusion it is proven that the practical use of arch reinforced concrete structures and (especially precast) steel roofs are preferable.

AUTHOR: Toth, Margit (Budapest); Major, Vencel (Budapest)ORG: Laszlo Central Hospital for Infectious Diseases/headed by: J. Roman/, Budapest (Laszlo Kozponti Jarvanykornaz)TITLE: Virological investigation of hospitalized cases of pseudocroup and acute laryngotracheobronchitis

SOURCE: Academia scientiarum hungaricae. Acta microbiologia, v. 12, no. 2, 1965, 189-200

TOPIC TAGS: virology, serum, antibody, virus, immunology, epidemiology

ABSTRACT: Infants and young children, admitted during a 12 months period with the pseudocroup-acute laryngotracheobronchitis syndrome, have been tested for respiratory viruses. Virus isolation was attempted in 423 cases, antibody response was determined in 229 serum pairs. Isolated were 261 virus strains in the following percentage distribution: parainfluenza type 3, 34.1%; RS virus 23.0%; adenovirus 17.6%; parainfluenza type 1, 1.1%. It was possible to base an etiological diagnosis on both virus isolation and serological test in 123 cases, on virus isolation alone in 133 cases, and on serological test alone in 58 cases. The immunological reaction among parainfluenza types, the double immune responses, the problem of recurrent pseudocroup, as well as the etiology of complicated cases are discussed. The authors thank Doctor E. Farkas and Doctor I. Domok (State Institute of Hygiene, Budapest) for laboratory facilities and advice during the study, as well as type strains, antigens and hyper-immune sera. They also thank Miss E. Budai and Miss E. Schlitter for excellent technical assistance. Orig. art. has: 1 figure and 4 tables. [JPRS: 33,500]

Characteristics of a model of processing in relation to the control system. Probl. matem. i prikl. fiz. i inzh. nauk 5:3 (1963). (MIRA 1964)

1. In the theory of control systems, the model of a system is a mathematical representation of the system. The model is used to study the system's behavior and to design control systems. The model is a simplified representation of the system, which allows for the study of the system's behavior without the need for a physical model. The model is a mathematical representation of the system, which allows for the study of the system's behavior without the need for a physical model. The model is a mathematical representation of the system, which allows for the study of the system's behavior without the need for a physical model.

WALLA, Alexander, NIEKRA, Eleanora, and NITKA A-MITRUSKA, Barbara, with the assistance of assistance of W. ZIEMKA, Lanuta; Division of Blood Storage (Zjazd Konservacji Krewi) (Director: Dr. med. A. WALLA) of the Hematology Institute (Instytut Hematologii i Transfuzjologii) in Warsaw (Director: Docent Dr. A. FOLKOWSKI)

"Effect of Temperature, Time, and Containers on Quality of Blood for Storage."

Warsaw, Farmacja Polska, Vol. 10, No. 9, 1965, pp. 192-195.

Abstract: In view of the different conditions and findings regarding the stability of blood during and storing blood in one-time utilization plastic material over the standard rubber transfusion containers, the authors conducted their investigations under the set-ups: I -- rubber tubing -- glass container, II -- rubber tubing -- plastic container, and III -- plastic tubing -- plastic container. They found little difference in the biochemical quality of the blood, its preservability, or hemolysis transmissibility. There is no listing of references.
