Kratkoye posobiye k operatsiyam na zhivotnykh po kursu topograficheskoy anatomy i operativnoy khirurgii /Short Handbook on Animal Operations During the Course of Topographic Anatomy and Operative Surgery/ Professor A. N. Maksimenkov, editor, Medgiz. 12 sheets

The book gives data on the anatomy of the dog, with reference to the operations performed on the animals at medical institutes in the departments of operative surgery. It describes operations on the limbs, head, neck, chest, and abdomen. Pavlov's directions on the care of dogs are cited and the classical Pavlovian operations described.

Intended for physiologists, surgeons, scientists, and experimenters.

SO: U-6472, 23 Nov 1954

2166. THE MECHANISM OF FIREARM WOUNDS (Russian text) - Maksimenko, A. N. - VESTN. KHIR. 1958. 80 1 (7-20 and 156) Illus. 23
Three series of experiments were carried out. The first series helped to determine the minimum vital power of the missile needed to overcome the intact surface covering of the body and to enter into the underlying tissues. The second series was executed on living dogs and made it possible to ascertain the loss of vital power of the wounding missile in through-and-through wounds of different body regions and organs. The third series was designed to assess the changes in different organs of dog and man at the moment of passage of the wounding missile. The method of high-frequency discharge photography, allowing a taking of pictures with a speed up to 1 million exposures in a second, was applied to this investigation for the first time. Thanks to this technique a bullet's flight in the air just before its entrance into the organ and at the moment of its exit from the wounded part could be traced.

TITLE: Some methoxy derivatives of acridine

SOURCE: Zhurnal organicheskoy khimii, v. 1, no. 6, 1965, 1137-1139

TOPIC TAGS: heterocyclic hydrocarbon, acridine, synthesis, antivirus agent

ABSTRACT: The synthesis and characterization of 1-, 2-, 3-, and 4-methoxy-6-nitro-9-aminoacridines and 1-, 2-, 3-, and 4-methoxy derivatives of α -nitroacridine were undertaken with the view of developing new antivirus agents. The starting materials used in the synthesis were the corresponding methoxy derivatives of 6-nitro-9-chloroacridine previously described by the authors (KhGS, 1, 99, 1965). The synthesis was carried out according to the scheme

ORG: Department of Organic Chemistry, Khar'kov Pharmaceutical Institute (Kafedra organicheskoy khimii, Khar'kovskiy farmatsevticheskiy institut)

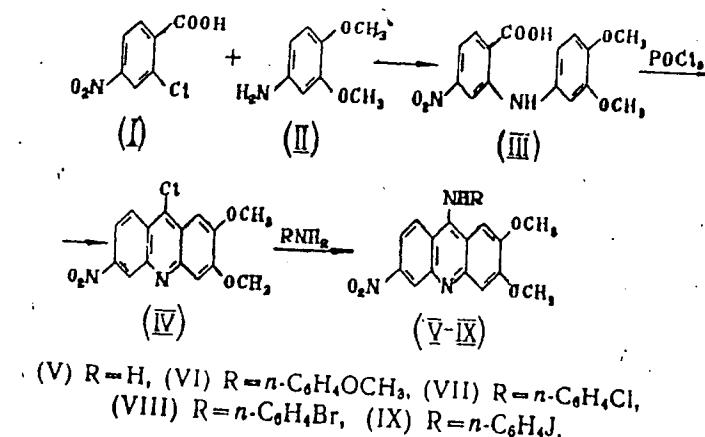

TITLE: Synthesis of 2, 3-dimethoxy-6-nitro-9-aminoacridine and some of its 9-N-phenyl derivatives

SOURCE: IVUZ. Khimiya i khimicheskaya tekhnologiya, v. 9, no. 2, 1966, 246-249

TOPIC TAGS: bacteriostatic compound, antibacterial compound, antiviral compound, acridine, acridine derivative, aminoacridine, dimethoxynitroaminoacridine, aminoacridine derivative, amine, organic nitro compounds

ABSTRACT: Bacteriostatic and antiviral agents were found among the nitro derivatives of 9-aminoacridine, e.g. nitroacridine 3582 [i.e. 2,3-dimethoxy-6-nitro-9- γ -diethylamino-a-hydroxypropylaminoacridine]. An attempt was made to modify this compound by replacing the aliphatic radical in the 9-amino group with a substituted aromatic radical to obtain some new compounds with antibacterial properties. The synthesis was conducted according to the reaction shown below:

UDC: 547.835.3/5

L-44-14-16
ACC NR: AP6021969

Initial substances in this synthesis were 2-chloro-4-nitrobenzoic acid (I) and 4-amino-veratrol (II). Their condensation product (III) underwent cyclization after treatment with POCl_3 in chloroform. The 9-chloro derivative obtained produced 5 $(\text{NH}_4)_2\text{CO}_3$, or its *p*-anisyl-*p*-chlorophenyl-, bromophenyl-, or *p*-iodophenyl

ORG: Kuybyshev Branch, Giproneftezavoda (Kuybyshevskiy filial Giproneftezavoda)

TITLE: An efficient system for collecting C sub 3 - C sub 5 hydrocarbons at petroleum refineries

SOURCE: Neftepererabotka i neftekhimiya, no. 12, 1964, 30-32

TOPIC TAGS: hydrocarbon, petroleum refining, diesel fuel, petroleum industry

ABSTRACT: At present the C₃ - C₅ fraction from stabilization and from hydrogenation refining of diesel fuel is not separated and utilized efficiently: a part of this fraction is wasted as fuel gas; another part remains in straight-run gasoline, interfering with fractionation; and still another part, which is transferred as gas condensate to gas-fractionation installations, is not stripped to an adequate extent from ethane. To satisfy the needs of the petrochemical industry, the C₃ - C₅ fraction should be completely liquified on proper purification (including removal of H₂S by treatment with monoethanolamine) and it should be used as chemical raw material. Only dry gas should be used as fuel and the straight-run gasoline should be stabilized completely. A flowsheet of plant operations whereby this can be accomplished is presented. Orig. art. has: 1 figure and 1 table. [JPRS]

AUTHOR: Maksimets, Yu. K.ORG: Kuybyshev Branch of Giproneftezavody (Kuybyshevskiy filial Giproneftezavodov)TITLE: Flowsheet for processing high-sulfur crudes at plants now in operationSOURCE: Neftepererabotka i neftekhimiya, no. 10, 1965, 3-7

TOPIC TAGS: petroleum refining, petroleum product, sulfur, crude petroleum

ABSTRACT: Using the conversion of the Kuybyshev petroleum refinery as an example, the author shows the fundamental differences between the flowsheets for processing sulfur and high-sulfur crudes at plants now in operation. In the case of high-sulfur crudes, the objective of the conversion is to raise the quality of the petroleum products without increasing the plant's crude-processing capacity. Various steps taken toward this end are listed. The yield and quality of the products obtained from the refining of sulfur and high-sulfur crudes are compared, and it is shown that the yield of motor vehicle gasoline from high-sulfur crudes decreases by almost 5%, that of diesel fuel increases by 1.3% and the total yield of white products drops by 4%. Conversion to the processing of high-sulfur crudes decreases the catalytic reforming capacity but sharply increases the hydrofining capacity. The serious problem of processing and utilizing heavy residues is discussed. Orig. art. has: 2 figures.

Construction (Mechanics); M.V. Polozov, Engineer.

PURPOSE: This collection of articles is intended for scientific and technical
personnel in the instrument industry.

CONTENTS: The 30 articles deal with the present state and the outlook for the
development of instrument manufacture and measurement technique. New problems
of design, construction, and manufacture of instruments are discussed in the first
two sections. Emphasis is given to problems of automation and mechanization of
production and to the application of new techniques in process control, ultra-
sonic, and vibroscopic methods of metals. The third section deals with new
manufacturing methods involving the use of ultrasonics and radio isotopes. Some
theoretical aspects of metrology and measurement technique are also discussed
in this section. No personalities are mentioned. References accompany several
of the articles.

in Certain Liver Diseases.

Orig Pub: Probl. Terap. 1957, 6, 7-18.

Abstract: The value of residual chromium (VRC) is normal or near normal (0.73) in the blood plasma of patients with mild forms of epidemic hepatitis (EH). In cases of EH of moderate severity the VRC is more frequently elevated (1.2-1.8), but even in severe cases of EH it does not exceed 2. In chronic hepatitis the VRC rises to 2.3-3 and

Title : Concerning the Fertilization Value of Peat, Saturated by Ammonia Gas at High and Low Temperatures.

Orig Pub : Roczn. gleboznawcze, 1956, 5, 221-249

Abstract : In vegetational and field experiments, peat, saturated by ammonia at high (100-250°) and low (down to 50°) temperatures, was tested, and its action was compared with nitrogen fertilizers and a mixture of peat with ammonium hydroxide. The advantages of peat, saturated by NH₃, at low temperatures, was explained. The action of this fertilizer on beets insured a larger harvest than the application of Na₂ with the addition of calcium carbonate. In experiments with flax and winter rape, the action of peat, saturated by NH₄, was identical with the action of

a mixture of N_{NO_3} and calcium carbonate. The NH_3^- -saturated peat ins red the yield of larger oat harvests than N_{NO_3} and of an identical mustard harvest. In experiments with rye planted after oats, the after-effects of peat, saturated by NH_4 at low temperatures, insured an addition to the harvest of 1.6-5.2 c/ha, in comparison with the action of HK. Ammoniacal N, saturating peat at high temperatures, enters into composition of stable non-assimilable-by-plants compounds.

AUTHOR: Flyusnin, V. G.; Maksimov, A. A.

TITLE: Alkylation of diphenyl with propylene

SOURCE: Zhurnal prikladnoy khimii, v. 38, no. 5, 1965, 1191-1192

TOPIC TAGS: alkylation, diphenyl, propylene, hydrofluoric acid, catalysis

ABSTRACT: Alkylation of diphenyl with propylene was studied using 98 to 99% HF and AlCl_3 as catalyst to find conditions for preparing a mixture of diphenyl with alkylation products in the liquid phase at room temperature. Such a liquid mixture could be used as a heat transfer medium. In the experiments with HF as catalyst, 400 ml of normal hexane solvent and 50 ml of 96 to 98% HF were used per 0.5 mol of diphenyl; the temperature was constant at 20°C, the molar ratio of propylene to diphenyl varied from 0.32 to 40, and the rate of propylene addition was 70 to 80 l/hr/kg of diphenyl. In the experiments with AlCl_3 as catalyst, no solvent was used, the temperature was constant at 80°C, 0.03 mole (or 40 g) of

Card 1/2

L 53600-65

ACCESSION NR: AP5014169

aluminum chloride was used per mol of diphenyl, and the rate of propylene addition was 240 to 260 l/hr/kg of diphenyl. All reaction products were washed to neutral reaction. The solvent was removed by steam distillation. The oily products containing mono- and diisopropylidiphenols were twice distilled under atmospheric pressure. Low degree of unsaturation of the reaction products (up to a bromine number of 26.0) indicates parallel hydro-dehydropolymerization reactions. With 96 to 98% HF as catalyst an oily liquid product (at room temp.) results from a minimum molar ratio of propylene to diphenyl in the range from 0.8 to 1. With aluminum chloride as catalyst such products (oily liquids at room temp.) result from a minimum molar ratio of propylene to diphenyl in the range from 0.7 to 0.9. Orig. art. has: 1 table.
