"Significance of the Vaccination About Prevention, Control and Eradication of Hog Cholera and Newcastle Disease."

Belgrade, Veterinarski glasnik, Vol 17, No 4, 1963; pp 317-314.

Abstract: Exhortatory essay appealing for maximum effort now to eliminate the two veterinary viroses. Hog cholera infected premises in 1962 are way down to 523, Newcastle Disease infected ones to 1090, so measures have great chance of success. Epidemiologic and legal procedures related to vaccination and treatment, cost accounting, insurance and control regulations are discussed. Five Yugoslav references including one unpublished, 3 from Official Gazette.

Title : A Way of Saving Softwood in the Paper Pulp Industry

Orig Pub : Celuloza si hirtie, 1957, 6, No 4, 123-127

Abstract ? It is pointed out that softwood may be replaced by hardwood  
(by poplar, in particular) in the manufacturing of unrefined cellulose  
cellulose and of a better grade of wood pulp which are suitable  
for a number of types of paper.

TITLE: Clinical forms of essential arterial hypertension *W*

SOURCE: Revista sanitara militara, v. 61, no. 4, 1965, 543-548

TOPIC TAGS: cardiovascular disease, blood pressure

ABSTRACT: The authors classify arterial hypertension from the etiological, evolutionary and symptomatological points of view, and briefly discuss each category under these aspects. Special attention is devoted to malignant and benign arterial hypertension, which are broken down into several stages each. [JPRS: 33,500]

Studies on the Lipid Spectrum of Plasma in Some Categories of Soldiers."

Bucharest, Revista Sanitara Militara, Vol 62, No 4, Jul-Aug 66, pp 683-690.

Abstract: The authors studied the plasma lipid spectrum of a group of 224 healthy soldiers, average age 32 years, divided into 3 groups according to age and diet pattern. They found that the average range of cholesterolemia in the age range 25 to 35 years is normally 150 to 200 milligram-percent, with values above 250 definitely abnormal. A direct causal relation was found between the percentage of lipid calorogenic tropines in the diet and changes in the lipid spectrum of the plasma.

Includes 4 tables, 4 figures and 17 references, of which 7 Rumanian, 4 French and 6 English-language. -- Manuscript submitted 18 November 1965.

Title : Planting Slopes in Belts as a Method of Preparing Them  
for Setting Out New Vineyards.  
Orig Pub : Comun. Acad. RPR, 1956, 6, No 2, 327-332  
Abstract : Experiments of the viticulture station in Valya Keluge-  
ryaske (Floesti, Rumania) have determined that when mo-  
derate slopes (25° - 30°) are being prepared for plan-  
ting new vineyards, the best way to inhibit soil erosion  
is to alternate belts of vineyard plantings with belts  
of unplowed land.

med ✓ Trichlorophenol as deproteinizing agent for the colorimetric determination of phosphates in blood serum. Mihalache, Natalia. Comus. Acad. Rep. Populare Romania 8, 636-7 (1955).—The use of trichlorophenol (I) instead of  $\text{CCl}_3\text{COOH}$  is recommended for protein-free serum prep. I has the advantage of not being hygroscopic, is cheaper, and can be recuperated. The maximum higher values of the phosphates obtained with I do not exceed 5%. R.M. /

Title : Rapid Method of Determination of Calcium- and Magnesium Ions.

Orig Pub : Rev. chim., 1957, 8, No 9, 597-599

Abstract : Description of a method of determining  $Ca^{2+}$  and  $Mg^{2+}$  by titration with a solution of Complexon III using murexide (for  $Ca^{2+}$ ) and eriochrome black T (for  $Ca^{2+}+Mg^{2+}$ ) as indicators; Mg is determined by difference. The determination is interfered with by the presence of large amounts of Al and Fe. The interfering effect of heavy metal ions is eliminated by an addition of 0.5 g crystalline  $Na_2S$  to the solution being analyzed. Duration of the determination of Ca and Mg does not exceed 1 hour.

 Radiotopes in the manufacture of plastics and glass  
 M. Mihalec and A. Ruzhik, Ind. week (Bucharest) 4  
 10-72(1967) - Radiotopes were used with good success  
 in the glass and plastics industry as a source of  $\alpha$ -radiation  
 in the case of the vulcanization of polyisobutylene and of  
 Butyl rubber and the polymerization of vinyl chloride by  
 $Co^{60}$ , or as an indicator. This latter case includes the detn.  
 of attack on glass contg. U by NaOH solus., measurement  
 of the diffusion rate of Ca in glass with the help of  $Ca^{45}$  and  
 the radiometric detn. of certain glass components, such as  
 boron by neutron absorption measurement.  $Co^{60}$  and  $Ca^{45}$   
 sources are also used for indicating the level of molten glass  
 in furnaces.

of  $H_2SO_4$  without the use of pressure or distillation. The ion exchange capacity of the R-21 resin is about 2 mequiv/gm, calculated on a dry resin basis; the density of the resin is 1.4852 gm/cm<sup>3</sup>, moisture content 7.8%, and swelling factor 1.3. Before utilization the cation exchange resin is put in the H form by washing with an HCl solution. Good results were obtained from the resolution of the following ion pairs:  $Na^+-K^+$  (elution with 0.05-1 N HCl; column dimensions 1 x 103 cm; resin grain size 0.2-0.3 mm),  $Ca^{2+}-Ba^{2+}$  (0.3 M solution of ammonium citrate at pH 5; 1.5x 24 cm; 0.4-0.5 mm),  $La^{3+}-Ce^{3+}$  (ammonium citrate solution of pH 3.2; 1x 105 cm; 0.1-0.2 mm), and  $Th^{4+}-UO_2^{2+}$  (1 N HCl;
