TITLE: Fluorescence method for the determination of uranium

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 6, 1962, 133, abstract  
6B107 (Priroda, v. 10, no. 2, 1961, 59 - 63)

TEXT: Uranium is determined by previously extracting it from the solution to be analysed in an extractor (diagram given) with diethyl ether (I) in the presence of  $\text{NH}_4\text{NO}_3$  as salting out agent. The solution to be analysed is filled into the extractor, a small amount of water and 50 ml of I are filled into the receiver, and extraction is made for 4 hr. If acidification of the solution is necessary to avoid hydrolysis,  $\text{HNO}_3$  is filled into the extractor through a lateral opening. After the extraction is terminated I is distilled off, the remaining aqueous solution of  $\text{UO}_2(\text{NO}_3)_2$  is evaporated to dryness, and the residue is mixed with NaF or a mixture of NaF +  $\text{KNaCO}_3$  (1:9). From the mixture obtained beads are produced and the

TITLE: Results of a check of the purity of the water in the first circulatory ring of the INT-1000 atomic reactor at Sofia

SOURCE: Bulgarian akademiya na naukite, Fizicheski Institut, Izvestiya na Fizicheskaya Katedra ANEB, v. 12, no. 1/2, 1964, 121-126

TOPIC TERM: nuclear reactor, reactor circulatory ring, water cooled reactor, reactor, water purity

ABSTRACT: This paper reports the methods used and the results of a two-year check (1962-1963) of the purity of the water in the first circulatory ring of the INT-1000 atomic reactor at Sofia. The following parameters were recorded: pH, electroconductivity, dry residue, iron, chlorine and aluminum content. Their values are very close to the standards recommended by other authorities. Data are cited from a spectral analysis of the distillate dry residue and an effort is made to explain the origin of the various components which have been found. Details are given in Tables 1 and 2 of the Enclosure. "The author expresses appreciation to senior scientific worker P. Simov for the spectrographic study of the dry residue and aluminum."

TITLE: Purification of water in the primary circuit of the IRT-1000 reactor in Sofia, and control of its quality

SOURCE: B'lgarska Akademiya na Naukite. Fizicheski institut. Izvestiya na Fizicheskiya institut s ANEB (News of the Institute of Physics and the Atomic Energy Scientific Research Foundation), v. 11, no. 1-2, 1963, 193-199

TOPIC TAGS: IRT-1000, nuclear reactor, reactor, circuit, ion exchange filter

ABSTRACT: Inasmuch as the IRT-1000 reactor in Sofia went into operation rather recently (18 September 1961), this analysis deals only with measures taken to fill the reactor's primary circuit with high-quality distillate. The results of the quality test are summarized in Fig. 1 of the Enclosure. It is indicated that pH, electrical conductance, dry residue, and the content of iron, aluminum, ammonium and chlorine are within the limits recommended for the operation of Soviet research reactors. Likewise reported are data on the effectiveness of the work done by the ion-exchange filters, as well as the first visual signs of corrosion in the primary circuit. Orig. art. has: 3 figures, 2 tables.

Title : Cytochemical and Cytological Characteristics of Micro- and Macrospores in Kidney Beans.

Orig Pub : Izv. Botan. in-t. B'lgar. AN, 1956, 5, 347-357

Abstract : A histochemical study was conducted on dynamics of nucleic acids in micro- and macrosporogenesis of kidney beans. It was established that synthesis of DNA and RNA occurs independently of one another. DNA is absent in nuclei of the archesporium, micro- and macrospores, while large quantities of RNA are contained in the plasma of these cells. The authors criticize the current concepts of meiosis and consider the picture observed in the prophase as a result of fixation. The viewpoint is expressed that prophase chromosomes of the first and second divisions form anew

TITLE: Geometric isomers of 3-phenylpentene-2

33  
E

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 4, 1965, 343-346

TOPIC TAGS: isomer, isomerization, aromatic hydrocarbon, IR spectrum, chromatography

ABSTRACT: 3-phenylpentene-2 has been synthesized and described for the first time in 1903 by Klages (Berichte, 36, 1903, 3692). Later other researchers used 3-phenylpentene-2 as an intermediary product to obtain 3-phenylpentane. No attempts were made, however, to isolate the two geometric isomers of 3-phenylpentene-2 and hence the constants published for this non-saturated aromatic hydrocarbon should obviously be referred to the mixtures of the two stereoisomers. The present paper reports on the results obtained from the isolation, identification, and isomerization (in terms of

Card 1/2

Title : Delaying Germination in Potato Tubers with the Aid of Synthetic Chemical Substances.

Orig Pub : Ovoshcharstvo i gradinarstvo, 1956, No 5, 48-53

Abstract : An investigation was made into the effectiveness of the chemical preparation developed in Bulgaria under the name of NES for delaying germination in potato tubers to be used in summer planting. Positive results were achieved. The NES preparation delays germination of the eyes and does not reduce the qualities of the tubers as seed. When treated the tubers give between 15 and 47% increase in yield. One kilogram of preparation is used for each 100 kilograms of potatoes.

"Treatment of Acute Pneumonia with Broad-Spectrum Antibiotics"

Sofia, Voenno Meditsinsko Delo, Vol 21, No 6, Dec 66, pp 30-35

Abstract: In clinical studies carried out on 404 patients, the  
therapeutic effect in acute pneumonias of broad-spectrum anti-  
biotics (biomycin, hydroxytetracycline, and erythran) was  
compared with that of penicillin applied alone or in combination  
with sulfonamides. It was established that application of biomycin  
or hydroxytetracycline reduced the course of treatment on the  
average by two days as compared with penicillin. Furthermore, a  
change of the antibiotic because of ineffectiveness was required  
in a lesser number of cases when treatment was carried out with  
biomycin or hydroxytetracycline. The therapeutic effect of  
erythran was not inferior in any respect to that of penicillin or

**TITLE:** At Our Bulgarian Friends (U nashikh bolgarskikh druzey)

**PERIODICAL:** Radio, 1957, # 8, p 16, col 1-3 (USSR)

**ABSTRACT:** The article constitutes a reply to "Letter to the Editor" by D. Konstantinov, this issue, about the activity of the Amateur Radio Club at the State Cellulose Plant imeni Stefan Kiradshiyev.

The members of the plant radio club develop not only amateur radio stations, but also design various electronic equipment required to improve production.

According to the example of the Leningrad Radio Club which built an hygrometer "CEBPA-3", the Bulgarian radio amateurs designed an identical instrument for their plant which measures the moisture of the wood pulp rapidly and accurately.

Recently, the club members were informed that the Leningrad Radio Club will send them several transistor sets.
