TITLE: Power Supply, Control, and Synchronization of Cinema Apparatus  
Used for Demonstrating Panorama Films

PERIODICAL: Tr. Vses. n.-i. kinofotoin-ta, 1957, Nr 9 (19), pp 158-186

ABSTRACT: A system of automatic control of cinema apparatus used for demonstrating panorama films is described. The system provides timing in the operation of three projectors and a film phonograph and ensures the following: synchronous and synphase acceleration, continuous operation, smooth stopping, and the synphase rest condition of the electric motors; synchronous and synphase operation of the motors; constant luminous fluxes of the three projectors; program control of the entire cinema apparatus in demonstrating and scoring the films; remote focusing of projector objectives; visual correcting brightness of individual pictures.

TITLE: A system of multiple-point control of technological parameters using an electron-beam indicator

PERIODICAL: Referativnyy zhurnal. Avtomatika i radioelektronika, no. 2, 1961, 14, abstract 2 V110 (V Sb. Teoriya i primeneniye diskretn. avtomat. sistem, M., AN SSSR, 1960, 230-235)

TEXT: A multiple-point system for the visual control and warning signalization using an electron-beam indicator ЭЛТ (ELT) is described. The use of such a system is especially useful in measuring parameters of objects with small inertia. Owing to the fact that ELT is practically inertialess, the velocity of reading controlled parameters can be made so great that a stationary picture of signals from all the control points can be obtained on the screen. In order to increase the number of parameters read without decreasing the

A system of multiple-point...

accuracy of measurements, only the deviations of parameters from their set values are measured. This setting may be done manually by the operator. The installations consist of pick-ups, an electronic switch, an ELT, and of the assembly of automatic control of parameters with the corresponding signalling and actuating elements. The pick-ups are connected by the intermediary of controlled switches with the vertical deflection system of the ELT. The switches are part of an electronic commutator and operate in such a manner that at any instant only one of the pick-ups is connected to the vertical deflection system of the ELT. At the same time the commutator controls the horizontal sweep of the ELT. The commutator works in such a way that the beam takes a certain fixed position along one or more of the horizontal screen axes. Each parameter has its reserved position on the screen. The automatic control operates through a system of visual signalling and of actuating elements situated between the vertical deflection system of ELT and the circuit where the given value of one or of a group of parameters is set by the operator. The ELT used was of the tube type 13Л037 (13L037).

D216/D302

A system of multiple-point...

The electronic commutator consisted of a four-stage binary counter using triggers, a diode decoder for binary to decimal code transformation and 16 controlled diode switches (corresponding to the number of measured parameters). The actuating elements in the signalling system (or automatic control) consist of cold cathode trigger tubes type MXT-90 (MKH-90). The installation was assembled using the computer modular construction. The CRT 250 mm dia. can display 64 parameters to be measured. The bloc-diagram of the installation is given. 3 figures.

AUTOMATIC CONTROL AND PROTECTION

"Transmitter of Calibrated Pulses" by Engineer K. N. Oskolkov. Elektricheskiye Stantsii, No. 6, June 1967, Pages 86 -- 87.

In laboratory and operational tests of control, signalization, and protective circuits and in telemechanics it is necessary in many cases to check the operation of the systems as functions of the duration of the supply of current in the coils of the relays or other equipment. The equipment described in this article is simple and is based on discharge of several capacitors through resistances and rectifiers, and can replace more complicated oscillographic equipment.

ABSTRACT:

- 1.) A criticism of the work by E.A. MEYEROVICH "Calculation of Transition Processes in Complicated Electric Circuits", published in Izvestia Akad. Nauk SSSR, Otdel. Tekhn., 1950 Nr 10. It is shown that this method is of no practical value. This is proved on the basis of an example. (With 1 Illustration)
- 2.) Following a suggestion made by the author an electro-mechanical time indicator was built, which makes it possible to record indications of time within definite periods on the oscillogram without using one of the vibrators of the oscillograph. The device is described. (With 1 Illustration).

TITLE:

Once More on the Protective Circuit for the Direct Current Rails of Converter Plants (Yeshche raz o skheme zashchity shin vypryamlenogo toka preobrazovatel'nykh podstantsiy)

PERIODICAL:

Elektrichestvo, 1959, Nr 7, p 85 (USSR)

ABSTRACT:

Experience gathered at the transformer plant of the Moscow subway showed that the previously (Ref 1) described protective circuit (against inclusions of direct current rails) have an important disadvantage, which consists in the fact that in the case of single-phase inclusions of the high-voltage cables, or in the case of a damaged insulation of the electrical equipment of the alternating-current side of the transformer plant, or during the operation of welding apparatus on the rails of the ground leak circuit, an alternating current passes through, thus rendering a false operation possible. For the purpose of avoiding a false operation inductive resistors in form of chokes without an air gap and with very low ohmic resistances are connected in series with the coils of the protective circuit. Experiments showed that, if an alternating current with the industrial frequency of 200 a

Card 1/2

Once More on the Protective Circuit for the Direct  
Current Rails of Converter Plants

SOV/105-59-7-24/30

flows in a steel rail of a length of 1.5 m and a cross section of 30 times 4 mm, a current of 60 a is branched off to the coil of the current relay ET-521/100' according to the circuit shown by the figure. If, however, with the same current with the relay a choke is connected in series (circuit b), a current of only 0.5 is branched off to the coil. Calculation of the coil and of the relaying device proved that such a reserve can be provided that completely excludes false operation even at the most unfavorable conditions. There are 1 figure and 1 Soviet reference.

**Antianaphylactic properties of vitamin B<sub>6</sub> in large doses**  
 V. M. Chernov, L. N. Chibalova, and N. A. Kulyavina.  
*Formal. i Tselizol.* 9, No. 4, 21-9 (1946). Contrary to  
 Geth (*C.A.* 20, 3000) and Ringold-Webb (*J. Am. Med.*  
*Assoc.* 138, 401-2 (1946)) massive doses of vitamin B<sub>6</sub> in  
 guinea pigs give antianaphylactic effects. Test animals  
 received 0.01 cc. normal horse serum (I) subcutaneously,  
 and 0.3 cc. of I intravenously 16 days later. This invariably  
 killed control animals, whereas 0.3 cc. of I was not  
 always fatal. Animals receiving 6 mg. B<sub>6</sub> subcutaneously  
 daily for 7 days, prior to reinjecting I, showed antianaphy-  
 lactic effects in that 33% were desensitized. They had no  
 B<sub>6</sub> deficiency. Single massive doses of B<sub>6</sub> (20-40 mg.)  
 prior to reinjecting I desensitized 10%; small doses (0.6  
 mg. daily for 7 days), none; vitamin PP (Na nicotinate)  
 in 7 daily doses (60 mg. each), 16%; vitamin C, 7 daily  
 injections, 40 mg. each, 33% of the test animals. The  
 dose of sodium needed for 100% desensitization was  
 only 0.3 cc. mm. of 1:100 (100) soln; given intravenously  
 5 min. before reinjecting I. Other desensitizers, given  
 5-10 min. before reinjecting I, and their desensitizing ef-  
 fect (in percentage of test animals), were: adrenaline,  
 0.5 cc. of 0.1% soln. injected intravenously, 0; atropine,  
 1 cc. of 0.1% soln. subcutaneously, 25; Na nucleinate, 1  
 cc. of 5% soln. intravenously, 0. The no. of test animals  
 in single tests ranged from 3 to 14. Julian P. Smith

TITLE: Sixth all-union conference on the theory of semiconductors

SOURCE: Uspekhi fizicheskikh nauk, v. 88, no. 1, 1966, 161-177

TOPIC TAGS: semiconductor theory, semiconductor plasma, transport phenomenon, semiconductor band structure, semiconductor carrier, exciton, luminescence, light absorption, crystal lattice vibration, *solid state physics conference*

ABSTRACT: This conference was sponsored by the Scientific Council on the Physics and Chemistry of Semiconductors (Academy of Sciences SSSR) jointly with the Academy of Sciences of the Moldavian SSR and the University of Kishinev, and was held from October 26 to 31 1964 in Kishinev. There were 284 participants and 128 papers were presented at 11 sessions. The papers of each session were summarized by a rapporteur who reviewed the state of the corresponding problems. The sessions were devoted to the following subjects (the name of the rapporteur is in parentheses):

1. Plasma phenomena in semiconductors (L. E. Gurevich), dealing with the spectra of semiconductors in equilibrium, nonlinear phenomena associated with the propagation of electromagnetic waves in semiconductor plasma, and non-equilibrium aspects of the electromagnetic spectrum. Papers by F. G. Bass; F. G. Bass and B. I. Khanikina; V. L. Bonch-Bruyevich and E. G. Kalashnikov; O. V. Konstantinov and V. I. Perel'; L. E.

Gurevich, B. L. Gel'mont, and I. V. Ioffe; and I. B. Levinson.

2. Quantum theory of transport phenomena (A. L. S. Efros), dealing with the quantum mechanical aspect of the motion of various carriers and excitations and their interaction with electric and magnetic fields in semiconductors. Papers by A. I. Ansel'm, Yu. N. Obratsov, and R. G. Tarkhanyan; Yu. N. Obratsov, G. I. Guseva; P. S. Zyryanov; V. L. Gurevich and Yu. A. Firsov; S. T. Pavlov and Yu. A. Firsov, and V. P. Kalashnikov and G. G. Taluts.

3. Band theory of semiconductors (K. B. Tolpygo), dealing with both the group theoretical and quantitative approaches to the electron dispersion in semiconductors. Among the lecturers were N. V. Kudryavtseva and V. E. Stepanov; G. F. Karavayev; V. A. Chaldyshev and A. S. Poplavnyy; V. G. Iyapin and K. B. Tolpygo; K. B. Tolpygo and D. I. Sheka; A. I. Gubanov; and V. M. Agranovich.

4. Theory of carrier recombination (V. L. Bonch-Bruyevich), dealing with the states from which electrons are captured, the manner of capture, and the final state of the electron. Papers were delivered by E. P. Sinyavskiy; V. A. Kovarskiy; V. A. Kovarskiy and I. A. Chaykovskiy; Ye. M. Kuznetsova; and V. L. Bonch-Bruyevich and A. A. Drugova.

5. Excitons and supplementary light waves (S. I. Pekar), dealing with various secondary effects produced by excitons in semiconductors, from both the theoretical and experimental points of view. Papers by V. I. Sugakov; S. I. Pekar; A. A. Lipnik; V. M. Agranovich and V. L. Ginzburg; and M. I. Shmaglyuk and S. A. Moskalenko.

Cord 2/4

1. 24251-66

6. Impurity light absorption and luminescence (Yu. Ye. Perlin), dealing with phononless transitions in semiconductors. Papers by M. A. Krivoglaz; V. V. Khizhnyakov; I. P. Ipatova and A. A. Klochikhin; Yu. Ye. Perlin; and O. I. Sil'd.
7. Theory of semiconductors with low mobility (Yu. A. Firsov), dealing especially with explanations of the exponential rise of mobility at high temperatures in some semiconductors. Papers by Ye. K. Kudinov and Yu. A. Firsov.
8. Theory of resonance phenomena and magnetic properties of semiconductors (E. I. Rashba), dealing with electron paramagnetic resonance, nuclear spin resonance, combined resonance, and allied problems. Papers by G. L. Bir; G. Ye. Gurgenishvili and G. R. Khutsishvili; V. I. Sheka; S. I. Pekar and E. I. Rashba; Sh. Sh. Abel'skiy and Yu. T. Irkhin; and A. M. Kosevich and L. V. Tanatarov.
9. Acoustic effects in semiconductors (V. L. Gurevich), with emphasis on generation and amplification of ultrasound. Papers by S. V. Gantsevich and V. L. Gurevich; A. A. Grinberg and N. I. Kramer; V. D. Iskra; V. L. Gurevich and V. D. Laykhtman; V. L. Gurevich; V. L. Gurevich and V. D. Kagan; Sh. M. Kogan and V. B. Sandomirskiy; Yu. V. Gulyayev, V. I. Pustovoyt, and P. Ye. Zil'berman; and G. Yu. Buryakovskiy, V. L. Vinetskiy, V. S. Mashkevich, and T. M. Tomchuk.
10. Theory of lattice vibrations (N. N. Kristofel'), dealing with the dynamics of crystal lattices, vibrational spectra of solids, and the theory of imperfect crystals. Papers by K. B. Tolpygo and E. N. Korol'; V. A. Kuchin; A. A. Nran'yan; V. S.

Cord 3/4

ACC NR: AF6005467

12

V. S. Oskotskiy; B. A. Tavger and V. Ya. Demikhovskiy; G. S. Zavl and N. N. Kristofel';  
and G. S. Zavl.

11. Phenomenological theory of semiconductors (Z. S. Gribnikov), dealing with various phenomena such as electroluminescence, galvanomagnetic effects, carrier injection, and field effects. Papers by O. S. Zinets, G. P. Pek and Yu. I. Kharkhanyan; V. N. Dobrovolskiy; M. Yerezhnev; Z. S. Gribnikov; and Yu. S. Ryabinkin.

The reports of some of the sessions contain large excerpts from the rapporteur's paper. Orig. art. has: 6 formulas.

AUTHORS: Oskory, Adam, Mozanek, Karel

TITLE: Using carburization of metal parts with natural gas in oil industry

PERIODICAL: Referativnyy zhurnal, Mashinostroyeniye, no. 18, 1962, 17, abstract 18B105 ("Wiadom. naft", 1961, v. 7, no. 9, 211 - 213, Polish)

TEXT: A unit is described for carburizing metal parts, as e.g. gear wheels, pump pistons, etc. The characteristics of the unit are: power - 105 kw; temperature 950°C; automatic temperature control, voltage on the furnace terminals - 380/220 v; there are two zones, one with 70 kw and the second with 35 kw power; 4 baskets; maximum load 500 kg; total furnace weight - 6,550 kg. The thickness of the carburized layer is 1 mm after 4-hour carburizing and 2.1 mm after 8 hours. Metallographical analyses showed a high quality of material carburized with natural gas. The process is 7 times less expensive than carburization with the use of powders.
