TITLE: Rate of hydrogen ionization on a half-immersed platinum electrode in an alkali hydroxide solution

SOURCE: Zhurnal prikladnoy khimii, v. 39, no. 8, 1966, 1742-1747

TOPIC TAGS: electric polarization, hydrogen, ionization, electrolyte

ABSTRACT: The object of the work was (1) to determine the polarization at an edge point of a half-immersed electrode and (2) study the influence of surface-active admixtures on the rate of hydrogen ionization. The upper part of the platinum wire electrode employed was in a hydrogen atmosphere, and the lower part was immersed in 7 N KOH. The derivative of the polarization of the edge point was found to increase with the polarization of the immersed part over a wide polarization range; this is attributed either to the fact that the electrolyte film becomes thinner in the dry part or to an increase in the density of the ionization current. It is shown that in the case of high polarizations, the series of experimental data obtained does not correlate with a film mechanism of hydrogen ionization. The data can be explained either in terms of kinetic hindrances caused by the slowness of the electrochemical stage,

Card 1/2

UDC: 541.13

L 05-55-67

ACC NR: AP6030898

or, preferably, by the fact that the ionization of hydrogen does not occur on the entire surface of the electrode, but only on active centers. The factor determining the ionization rate is the supply of hydrogen to the active centers both through the electrolyte film and by migration in the σ phase of the electrode (from adsorption centers to ionization centers). In conclusion, authors thank V. S. Daniel'-Bek for a useful discussion of a number of problems touched upon in the study. Orig. art. has: 4 figures, 2 tables and 11 formulas.

The State Publishing House of Political Literature has published a textbook entitled "Political Economics." The textbook has been compiled by a group of economists: led by Academician K. V. Ostrovityanov; associate member of the USSR Academy of Sciences, D. T. Shemilov; Associate Member of the USSR Academy of Sciences, L. A. Leontyev; member of the All-Union Academy of Agricultural Sciences Named After Lenin, I. B. Kartev; Prof. I. I. Kuzminov; Doctor of Economics I. M. Gatsvsky; Academician E. P. Yudin; Associate Member of USSR Academy of Sciences, A. I. Pashkov; Economics Candidate V. I. Pereslerin.

In the compiling and finishing of statistical materials included in the textbook, Doctor of Economics V. M. Starovsky took part. The textbook contains three sections: 1—Pre-capitalist means of production; 2—Capitalist means of production; 3—Socialist means of production. The textbook is being issued in a mass edition.

ABSTRACT: He was born on February 10th, 1878 in Litomyshl', Eastern
Czechoslovakia, into the family of an elementary school
teacher. In 1900 he completed his studies at the University
in Prague and was graduated as doctor of philosophical
sciences. In 1905 he was appointed docent and in 1909
professor of this university. Already when he was a student
he occupied himself with Hussitism and in 1900 he published
his first work on this subject. A substantial part of his
historical works is devoted to social history and to the
political attitude of the Czech people in the 19th century,
among them the two works "Bedrshik Smetana" and "Masarik".
A series of his works is devoted to prominent personages

of the Czech civilization of the 19th century. He must also be considered as the founder of Czech musical science. In 1903 he published a work on the history of Czech music and in 1905 he defended the dissertation on musical science at the Karls-University. In 1903 his work "General History of Music" was published. He also was interested in pictorial arts, literature of arts and theater, in which connection his work "History of the Opera in the National Theater" is mentioned in 1935. Neyedly must also be considered as an important politician who takes an active part in the politics of his country. In 1937 he published his monograph: "Lenin". During world war II he emigrated to the USSR where he immediately worked as collaborator of the Institute for History of the AS USSR. He was also appointed professor at the Faculty for History at the Moscow University. He wrote a series of books on the Soviet Union. He was decorated with the Lenin order. In 1947 he was elected corresponding Member AS USSR and in 1953 professor honoris causa of Moscow University. There is 1 figure.

TITLE: Problem of angle noise

SOURCE: Radiotekhnika i elektronika, v. 11, no. 4, 1966, 592-601

TOPIC TAGS: radar noise, radar guidance, radar tracking

ABSTRACT: According to the fundamental work on the flicker of a target-echo center (angle noise) performed by A. S. Dunbar (J. Appl. Phys., 1952, v. 23, no. 8, 847), the angular error and its mean-square value can reach infinity. The present article clarifies the reason for this infinity solution and presents a more accurate law of distribution of angle-noise probability density; the latter permits

Card 1/2

UDC: 621.396.964 - 187.4

L 36189-66
ACC NR: AP6011439

estimating mean-square values. The angle-noise dispersion for a real direction

finder can be found from: $\sigma_{\Delta\theta}^2 = ak \int_0^{\arctan \beta} \frac{(\arctan x)^2 dx}{(1+k^2x^2)^{3/2}}$, where $a = \sqrt{1+k^2\beta^2} / k\beta$ is the

normalization coefficient; the mean-square value of the angle noise can be deter-

mined from: $\sigma_{\Delta\theta}^2 = \frac{1}{k} \sqrt{f(k\beta)a} = \frac{a}{2m} \sqrt{f(k\beta)a}$. Thus, it is possible to find an approximate

value of the current-distribution function when the amplitude diagram is specified.

A slow-varying amplitude diagram results in a slow-varying current-amplitude distribution; the phase distribution is nonlinear, close to square-law. Orig. art. has: 5 figures and 40 formulas.

of the Transvolga district of the USSR. It shows a constant growth with the heavy growth of the cotton crop, which is the main crop of the district. The lower yields of cotton are characterized by irregularly well watered areas, lack of drainage of ground waters with distributed water and more and irrigated areas. The results of the experimental work are presented in the attached part of the article in which 1000 thousand hectares of lands suitable for irrigation are mentioned.

AUTHOR: Ostrovoy, Yu. D.

TITLE: Evaluation of the effect of a surface active medium on the stressed state of a surface during friction

CITED SOURCE: Sb. Vopr. mekhan. i mashinostr., Kiyev, Kiyevsk. un-t, 1964, 21-30

TOPIC TAGS: armco iron, boundary friction, surface active agent, residual stress distribution, wear resistance

TRANSLATION: The article discusses some of the principles of plastic deformation of surface layers in armco iron subject to boundary friction, and the effect of surface active agents on the depth of propagation and pattern of distribution of residual stresses. A relationship was established between wear resistance of tested samples and the magnitude of primary residual stresses.

TITLE: Additives to lubricating oils and their action during friction

SOURCE: Fiziko-khimicheskaya mekhanika materialov, v. 1, no. 1, 1965, 32-39

TOPIC TAGS: lubricating oil, oil additive, metal friction, surfactant additive, contact friction, metal thiocyanate, metal dithizonate, friction couple

ABSTRACT: After discussing the mechanisms by which a lubricant operates in contact friction between metals and pointing out the desirable effects of additives, the authors review the reported data on surface-active additives and chemically active additives to lubricants. The changes brought about by surface-active additives in the contact surface of the metal under conditions of friction are considered (changes in plastic deformation and in the resultant hardening, changes in the density of dislocations and in the intragranular structure). In the case of chemically active additives, the desirable effects of such compounds are thought to be due to their decomposition under the influence of the high temperature produced by the friction. Investigations of metal complexes of the type of thiocyanates and dithizonates are reviewed, and their effects are illustrated by the example of an armco --

The influence of small doses of superphosphate on the development of plants in the presence of phosphoric meal as fertilizer. Maria Ostrovskaya and Jaroslav Meronik. *Polish Agr. Forestal Ann.* 28, 297-310 (1931). *Chem. Zvest.* 1932, 1, 2637. — In soil treated with a physiol. neutral fertilizer, a dose of superphosphate placed immediately under the seed increases the yield of oats 81%, that of the seed 91%. The simultaneous presence of phosphoric meal increases the effect. This procedure favors growth, hastens ripening, raises the P₂O₅ content of the portion of the plant that is above ground and the N content of the seed, and decreases the ratio seed/straw. The ratio P₂O₅/N in the seed is not affected.

2753. Selective earth fault signalling equipment in electric power systems. A. V. OSTROVSKAYA AND I. M. SIMOTA. *Elekt. Stantsii*, 1954, No. 12, 28-31. In Russian.

A simple zero-sequence current transformer is described for mounting around 3-core cables with laminations of one yoke stacked at site. Circuit diagrams, photographs and main data are given of 3 standard sets of equipment for indicating 1-ph. earth faults in substation feeders of power systems with insulated neutral. Discrimination between faulty and healthy line is obtained from the direction of the output current of a mechanical rectifier with vibrating contacts energized by the zero-sequence voltage and rectifying the zero-sequence current or vice versa. Polarized relays can be used instead of standard mechanical rectifiers. Either individual rectifying and indicating equipment is installed for each feeder or one central set is applied to the current of each feeder in turn through selector

1952 Analysis of direct and acid azo dyes.
E. M. Kravtsov, D. I. Ostrovskaya and D. G. Pereyaslov (A. M. Gorki Khar'kov State Univ.) *Chem* 3

Zhur. Anal. Khim., 1958, 11 (2), 216-218. The benzidine method of determining direct and azo dyes (Bogdanovskii, *Tekstil. Prum.*, 1953, 4, 31) is modified by the introduction of potentiometric titration with NaNO_2 of the excess of benzidine. The sample (0.05 to 0.1 g) of dye is dissolved in 10 to 20 ml of water and the soln. at 20° C is treated with twice the theoretical amount of 0.1 N benzidine hydrochloride. The precip. salt is filtered off and the filtrate is diluted to 100 ml in a suitable flask. A suitable aliquot of the soln. is titrated with 0.01 N NaNO_2 by the method of Litvinenko *et al.* (*Anal. Abstr.*, 1956, 6, 1069). The method is applicable to the determination of all sulpho dyes that give water-insol. benzidine salts. Titration of the excess of benzidine hydrochloride with NaOH soln. in the presence of phenolphthalein is unsatisfactory because of the colour of the soln. G. S. Smith

Abstract

: The relation between the structure, color and substantiveness of benzanilide dyes was investigated. The increase in the color and drop in substantiveness of these dyes due to the absence of conjugated double bond chains in their molecules, are discussed. The possibility that the structure of the dyes is less favorable for the formation of hydrogen bonds between the auxochromes of the dyes and cellulose is analyzed. It
