Report on a case showing an unusual tumorous growth. The author suggests that xanthomata are real tumours originating from embryonal anlage, formed by xanthoma cells producing lipid substances. Local factors are most important in the genesis of xanthomata, changes in cholesterol metabolism enhancing but not causing its growth. The only effective treatment is operative removal.

1190. PAJTÁŠ J. Klin. pre očné chorob. lek. Fak. SU., Košiciach. * Spojivková astenopia vo svetle pavlovskej fyziológie. Conjunctival asthenopia in the light of Pavlov's physiology ČSL.OPTHAL. 1954, 10/6 (357-362)

Chronic conjunctivitis represents peripheral stimuli which lead to formation of conditioned reflexes of fatigue - inhibition. If this is stimulated by close work, an increased fatigability sets in and total inhibition results as the functional ability of the nervous cells was overstepped. By repeated and intentionally forced close work the asthenopia becomes a pathological, conditioned connection in those areas of the brain cortex, in which the intentional accommodation mechanism is brought about - and this results in some subjects in a psychoneurotic condition - neurosis. It is an example of long lasting psychic trauma which might be reversed by judicious treatment.

"Some Observations in the Experimental Small-Intestine Invagination of Dogs"

Leipzig, Archiv für Experimentelle Veterinarmedizin, Vol 20, No 3, Jun 1966,
pp 553-563.

Abstract: The small intestines of 42 dogs were invaginated by intussuscep-
tion and fixation so that the condition resembled the spontaneously occurring
disease. All animals developed a degree of mechanical ileus. The critical
period of the disease was the 4th to 6th day; 14 animals died during this
period. Once this period has passed the chances of defecation being resumed
were good. Eight dogs showed various complications, such as abdominal-wall
infection, stomach rupture, intestine twist, and the like. The invagination
was invariably lethal if the small intestine was inflamed at the time of
intussusception. 35 references, including 14 German, 2 Yugoslavian, 1
Czechoslovak, and 18 Western. (Manuscript received 2 Jul 1965.)

Title : Alkylation of aromatic hydrocarbons with olefines in the presence of metallic Al and halogen derivatives

Periodical : Zhur. ob. khim. 24/1, 94-96, Jan 1954

Abstract : The possibility of alkylation of aromatic hydrocarbons (benzene) with olefines (ethylene, propylene, isobutylene, isooxylene and cyclohexene) in the presence of metallic aluminum and additions of halogen derivatives, is explained. The amount of Al used for the alkylation was found to be of no great importance since only a small part of it enters into reaction. Room temperature was found to be the most favorable condition for the reaction with low-molecular olefines; high temperature was required for olefines with higher molecular weight. The results obtained from such alkylation are listed. Five references: 3-USSR and 2-German (1895-1953). Tables.

TITLE: The Construction of a Derivation Canal in Shifting Ground (Stroitel'stvo derivatsionnogo kanala v oplyvayushenikh gruntakh)

PERIODICAL: Gidrotekhnicheskoye stroitel'stvo, 1958, Nr 10, pp 30-33, (USSR)

ABSTRACT: The authors describe the construction process of a derivation canal, built as a part of the Nizhriy Bozsu Hydroelectric Power Plant near Tashkent. The topographic and hydrographic situation of this canal were very unfavorable. The geological structure of the canal consisted of Quaternary deposits, represented by loess-like clayey soils, overlying the eroded surface of basic rock, marl and sandstone. The depth of subsurface water varied in limits of 2 - 3 to 0.5 - 1.00 m. E-1004 excavator and ESh-1 walking excavator were used in the excavation. The excavation work was stopped after reaching 1 - 1.5 m below the subsurface water horizon, due to a shifting of the ground. The following re-

Card 1/2

107-96056-10-8/11
The Construction of a Derivation Canal in Shifting Ground

commendations were made: 1) a minimum deep, parabolic-shaped canal cross-section was needed; 2) a stabilization of the canal slopes by means of loading the lower sections; 3) an extension of the embankment as much as possible to allow the moving of equipment. There are 2 diagrams and 1 map

TITLE: A slag ladle for blast furnace plant with additional stiffening ribs (Shlakovyy kovsh domennogo tsekha s novymi rebrami zhestkosti)

PERIODICAL: "Vestnik Mashinostroyeniya" (Engineering Journal)
1957, No. 1, pp. 23 - 25 (U.S.S.R.)

ABSTRACT: In view of the short service life of existing slag ladles, temperature measurements were carried out which have revealed points where the creep strength of the material is exceeded. A re-designed stiffening ring is illustrated which ensures adequate strength and stiffness.

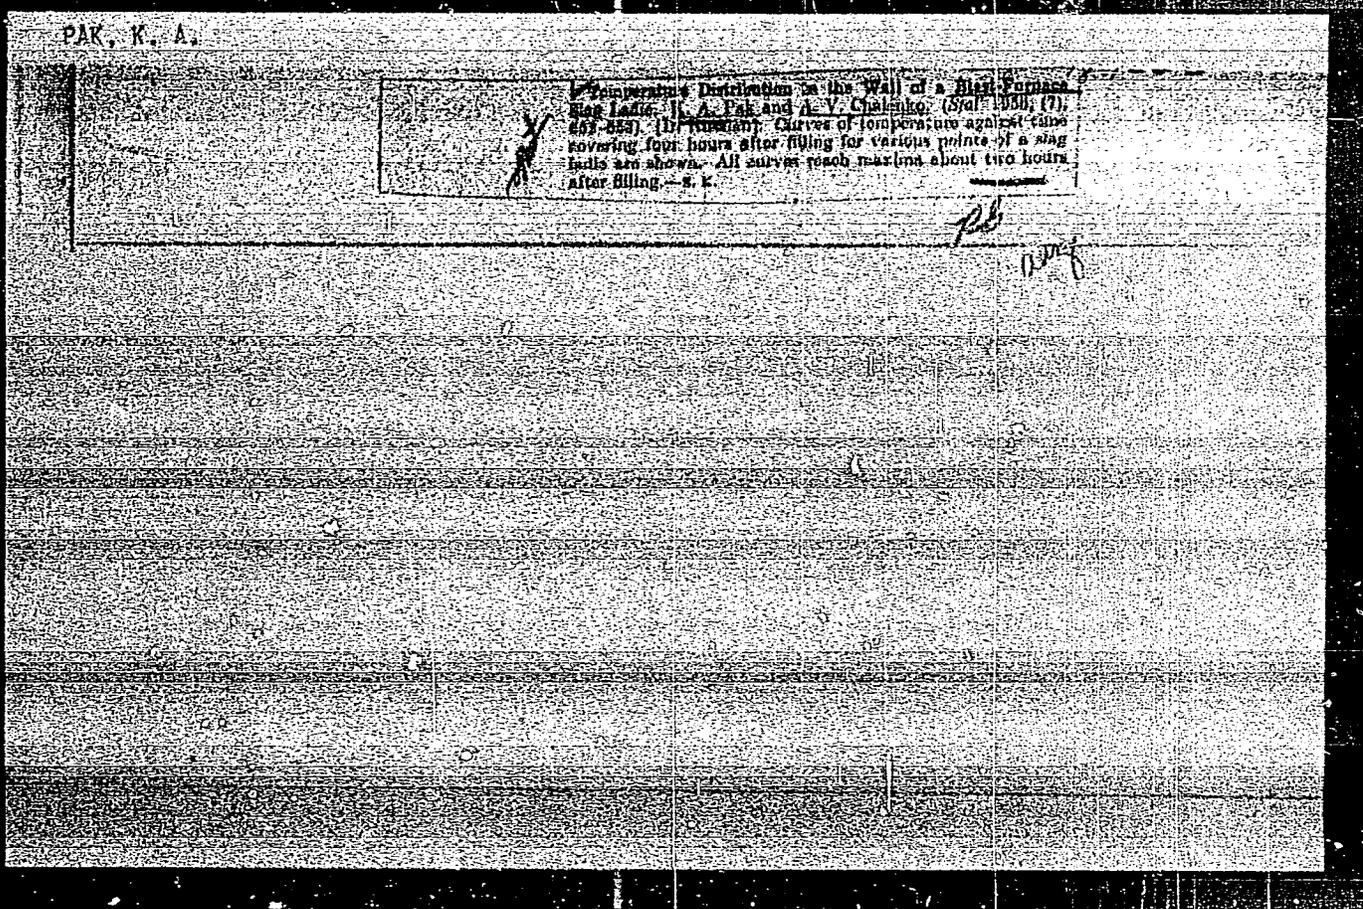

Card 1/1 There are 4 figures, including 2 photographs.
