"Interesting Phenomena in the Chromatography of Quinine and Quinidine Mixtures"

Belgrade, Arhiv za Farmaciju, Vol 16, No 1, 1960, pp 17-22

Abstract [Author's summary modified]: Schleicher Schull 2043 6/10 filtration paper impregnated with 2% can be used for the differentiation of quinine and quinidine bases. In the mixtures of both alkaloids, if the quantity of quinidine is equimolecular with the quinine or less, interesting phenomena occur because after spraying with Dragendorff's reagent only one spot appears on the chromatogram. In order to obtain two spots, the quantity of quinidine must be greater than that of quinine. The described procedure was not able to differentiate sulphate quinine and quinidine as their R_f values were identical. 4 Yugoslav, 10 Western references.

"Differentiating Atropine from Scopolamine."

Belgrade, *Arhiv za farmaciju*, Vol 13, No 5, 1963: pp 161-163.

Abstract: Description of reaction developed by analogy with that differentiating quinine from quinidine: iodine steam will impart gray purplish coloration to drop of atropine on filter paper, yellow to scopolamine; 2 mcg. of alkaloid salts are minimum required. With dilute Dragendorff reagent, atropine is reddish (sulfate); scopolamine hydrobromide yellowish at 0.01% solution. One German, 17 Yugoslav references.

Title	: Rapid Identification Method for Quinine, Quinidine, and Also for Their Salts	
Orig Pub.	: Acta pharmac. jugosl., 1958, 8, No 1, 7-9	
Abstract	: Developed is a method for identification of quinine, quinidine, as well as of their salts, employing filter paper: to 1 ml of 1% alkaloid (salt) solution in 96% C ₂ H ₅ OH is added 0.05ml of dilute H ₂ SO ₄ : 1 drop of the obtained solu- tion is placed on filter paper and is treated with iodine vapors for approx. 30 seconds. Quinine forms a colored spot ranging from grayish-red to grayish-blue with dark yellow fringes, while quinidine forms a dark yellow spot. --

TITLE: 'Arena' Amphitheater in Pula. Establishment of plans for the conservation service and reconstruction works (concluding part)

SOURCE: Geodetski list, no. 4-6, 1965, 99-112

TOPIC TAGS: photogrammetry, construction

ABSTRACT: The establishment of the original plans of the "Arona" amphitheater in Pula, Yugoslavia, are but a part of the effort to conserve and eventually reconstruct fully this historical object. The only other such outline was prepared in 1899 and is being kept in Vienna. The present work utilizes 1:50 and 1:100 scale ratios for the base outlay and the upper structures, respectively. The reconstruction of the original plans is based on 1800 measured points. The present, last part of the article, gives a geodetic-archeological analysis of the measurements. Results show that the form of the amphitheater is extremely close to a second order curve. Data processing yields the values of the parameters of the ellipses representing the cross sections of the various floors of the amphitheater. Student of Geodesy Mato Lojen assisted during the field work, Eng. Kruno Smit carried out the terrestrial photogrammetry, Eng. Anica Brukner prepared the charts, while Eng. Vladimir Mackovic processed the data (as part of his diploma work).

TITLE: 'Arena' - pula amphitheater - the design of plans for its conservation and reconstruction

SOURCE: Geodetski list, no. 1-3, 1965, 65-80

TOPIC TAGS: geodesy, geodetic survey, photogrammetry, arts

ABSTRACT: In this first installment of a comprehensive study, the author gives 1) a brief description of the amphitheater, 2) the formulation of the task, 3) a brief historical survey of earlier geodetic surveys, 4) the detailed dimensions and plan surveyed by the Zeiss ThD instrument, and 5) the description of the outer mantle of the "Arena" (representing the first case of terrestrial photogrammetric survey in Yugoslavia of such a large cultural and historical object). TITLE: Parachute. Class 62, No. 171274

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 10, 1965, 117-118

TOPIC TAGS: parachute, shroud line, canopy

ABSTRACT: An Author Certificate has been issued for a parachute with a canopy in the form of an annular hoop (see Fig. 1 of the Enclosure). To increase the drag coefficient and stability, the parachute is provided with a small hemispherical canopy. The shroud lines of this canopy are brought into an eye ring which is fastened to the central shroud line. The outer edge is connected to the inner edge by four mutually perpendicular shroud lines. TITLE: Electronic voltage-to-code and code-to-voltage translator for the BESM-2 computer 166

SOURCE: Kombinirovannyye vychislitel'nyye mashiny; trudy II Vsesoyuznoy konferentsii-seminara po teorii i metodam matematicheskogo modelirovaniya. Moscow, Izd-vo AN SSSR, 1962, 174-185.

TOPIC TAGS: computer, BESM-2, translator, electronic, voltage, code, pulse generator, memory.

ABSTRACT: This paper describes an equipment which accomplishes parallel translation of 4 functions, information on which appears in the form of tables in the operative magnetic memory (OMM) equipment of a computer, into the form of curves on an oscillograph screen. The equipment is also intended for the reverse translation of 4 continuous functions of time given as voltages into a tabulation of numbers and their storage in the OMM of the computing machine BESM-2 of the AS USSR. The paper describes the design of the translator (T) which is assembled from standard blocks of the BESM-2 computer and PV units. Its operation is

Card 1/2

L 17766-63

ACCESSION NR: AT3001883

synchronized by a separate stable pulse generator. The maximum sequence frequency of the generator pulses is limited by the speed of the OMM circuit and is 30 kcps. During the operation of the T, the generator serves as a time standard and a pace setter for the rate of translation of a function along the time axis. The voltage translated can vary from 80 to 100 v. The entire voltage range is divided into 256 parts. When one and the same quantity is introduced in parallel inputs, the translation step is reduced correspondingly. A description is given and circuit diagrams are shown for each of the separate blocks of the T, comprising the block of the pulses and the control potentials, the control counter, the seven-digit counter, the reversible counter, and the input and output blocks. The two regimes of the T, that is, from voltage to code and from code to voltage, are described in detail. Orig. art. has 7 figures.

Lead acetate in a concentration of 125 p.p.m. in water containing the eggs of Rana fusca inhibits the development of the spawn. The amount of 12.5 mg. per 100 ml. thiamine stimulates the development of the spawn and decreases the toxicity of lead acetate. In tadpoles the addition of 0.005% lead is lethal within 24 hours and is not counteracted by thiamine. The concentration of 0.0005% lead acetate produced a chronic intoxication. The mortality was lowered by 25 mg. of thiamine per 2 litres. The inhibition of growth which resulted in tadpoles with chronic lead intoxication was not modified by the addition of thiamine.
