Title : Biochemical Basis on Lipotropic Treatment of Parenchymatous Injury of the Liver.

Orig Pub : Viata med., 1956, 3, No 5, 82-94

Abstract : Phospholipid synthesis in the liver, facilitating the dissolution of fats and their utilization in the tissues, prevents excessive accumulation of fats in the liver. Chemical compounds facilitating the formation of choline for the phosphatid synthesis act as lipotropic factors: choline, betaine, methionine, inositol, phytol, Vitamin B<sub>12</sub>. A detailed description of these substances is given. The most important lipotropic substances appear to be cholesterine and cystine. Authors emphasize the significance of the absence of lipotropic and excess of antilipotropic substances in food.

"Contributions to the Study of the Efficiency of Antityphoid Vaccination."

Bucharest, Microbiologia, Parazitologia, Epidemiologia, Vol 11, No 6, Nov-Dec 66, pp 523-525.

Abstract In a controlled study, the authors found that sera from 3 to 10-year old children without a history of typhoid or vaccination did not protect chicken embryos against infection with Salmonella typhi 2. All sera from adults after vaccination did have a protective titer; in those persons where a degree of protection was evident, the vaccination resulted in a marked increase in the protective titer. The protective titer of all immunized persons was considerably smaller than that of immunized animals, presumably because of the difference in administration route and quantity of antigen.

A clinical observation is reported of a primary pericardial tumour which developed parallel with a chronic lymphatic leukaemia, and which led to death from cardiac insufficiency. Morbid-anatomical examination revealed a diffuse primary pericardial mesothelioma and myo-pericardial infiltrations of leukaemic nature. The possibility of a transformation of the leukaemia into sarcomatosis and vice versa is considered.

4362. MIGRATORY THROMBOPHLEBITIS AS A CLUE TO VISCERAL CANCER -  
Les thrombophlébites migratoires révélatrices d'un cancer viscéral -  
Popesco I. and Ciobanu V. I. Clin. Med., Hôp. Colentina, Bucarest -  
SEM. HOP. PARIS 1958, 34/1 (26-30 and suppl.)

Presentation of personal observations concerning those erratic venous thromboses of the limbs which are the clinical signs preceding the latent carcinomatous localizations of certain viscera. In all of the cases reported the primary carcinoma was concealed by more obvious manifestations such as thrombophlebitis, digestive haemorrhages and particularly a septicæmic status. The time interval between the appearance of the thrombophlebitic process and the discovery of the latent visceral carcinoma varied from one week to one yr. It would appear that the incidence of the phlebitic process with muciparous neoplasias was found to be much higher than in the other varieties of malignant tumours. In all of the cases the coagulation tests were shown to be normal, even in the full period of digestive haemorrhages and thromboses. Both superficial and deep venous thrombi are constituted by agglutinations of erythrocyte clumps, with no tendency towards an organization process, with no inflammatory aspect and no neoplastic cellular structure. Any patient who showed 2 or several manifestations of thrombophlebitis, whatever the location, intensity and duration, should be suspect, and all the more if he is past middle age. (IX, 5, 6, 16)

Title : Influence of Micro-Elements on the Growth and De-  
velopment of Corn.

Orig Pub: Studii si cercetari stiint. Acad. RPR Fil. Iasi.  
Biol. si stinnte agric., 1956, 7, No 1, 153-166.

Abstract: Treatment of seeds with boric acid in a concen-  
tration of 0.2% accelerates the appearance of pan-  
icles by 3-4 days, ripening of ears and increases  
the grain harvest (by 7-23%). If the plants are  
sprayed with boric acid the influence of the boron  
is weaker. Nitric acid uranium lengthens the rip-  
ening period of the ears and increases the harvest.

TITLE: Contributions to the observation system in the mass spatial sounding method

SOURCE: Petrol si gaze, v. 17, no. 1, 1966, 1-9

TOPIC TAGS: seismology, seismic wave

ABSTRACT: The authors describe the new corridor observation system of <sup>12</sup>seismic sounding and detail its technical-economic advantages over the classic methods of surface observation. An explanation is suggested for the appearance of the focussing of vectors with large displacements, on the basis of multiple causes related to accidental and systematic errors that affect the values of the reflected elements. Rumania/Pharmacology. Toxicology. Narcotic Drugs

Abs Jour : Ref Ahur-Biol., No 7, 1958, 32787

Author : Daneilopolu D., Corneanu M., Palac M., Fotino S., Stoiculescu P.,  
Radescu S., Popescu I., Petrrescu E.

Inst : Medical Academy of the Rumanian People's Republic.

Title : Investigation of the Nonspecific Pharmacodynamics of the Action of Soporific  
Drugs. Their Application in Experimental Physiology and Therapy.

Orig Pub : Suclarile Sesiunii stiint. sec. stiinte med. Acad. R. P. R., 1954,  
Bucuresti, 1955, 9-48

Abstract : The premise that soporifics affect only the higher nervous centers is contradictory to the premise that all these preparations as a rule act equally on all sections of the neuron. Danielopolu thinks that 2 types of action by the drugs and physical agents should be distinguished: "the interstimulating antagonistic mechanism" and "the corticoendocrine affector mechanism." In order to clarify the mechanism of the action of soporifics the authors investigated the actions of chloral, chloralose, paraldehyde, and luminal. Their influence on the action of the mediators-acetylcholine (I) and histamine (II), and also of the ions of potassium on the uterus of a virgin guinea pig; on the terminal section of the iliac of the same animal; on the straight muscle of frog's abdomen; on the stimulation of the excretion of adrenalin (III) in a dog induced by KCl of 1; on the effect of lll on the blood pressure of animal; and on the increase in the secretion of lll induced by the irritation of the splanchnik was investigated. The authors found that like the action of other drugs the action of

Card 1/2

Rumania/Pharmacology. Toxicology. Narcotic Drugs

U-1

Abs Jour : Ref Zhur-Biol., No 7, 1958, 32787

soporifics may be nonspecific and specific. A nonspecific effect is known as one which affects the processes which are the results of the modifications in the action of mediators caused by a given substance. I has shown that luminal has a specific and a nonspecific effect on the working organ, with the first predominant when large doses, and the second predominant when small doses are administered. The nonspecific action is exhibited in a weakened reaction of the organs to l, while the effect of ll and potassium ions does not change. The specific effect of large doses is indicated by a primary paralysis of the cells in which they are insensitive to l, ll, potassium ions, and even to barium chloride. Chloral, paraldehyde, and chloralose while nonspecific in action intensify the effect on l on the musculature. Their specific action causes contractions, which is succeeded by a second paralysis caused by exhaustion. In experiments on a dog luminal inhibited the action of l (produced a frenatorial action); the greater the dose the greater its inhibition. It was impossible to differentiate between this action and its specific paralyzing action. Small doses of chloral, paraldehyde, and chloralose as a result of their nonspecific action intensify the effect of l on the nervous system; large doses depress it (specific frenatorial effect). In some small animals chloralose may induce spasms. Luminal interferes with the increase in the secretion of lll by the myeloid substance of the suprernals induced by l and potassium ions. Chloral, paraldehyde, and chloralose have no effect on the secretion of lll.

Title : The Effect of Pineal Hormone on Higher Nervous Activity.

Orig Pub. : Fiziol. norm. si patol., 1958, 5, No. 1, 15--20

Abstract : In an experiment in which free movement was permitted, a study was made of the conditioned motor reflexes of dogs, as well as salivation reflexes in a stereotype system (positive an inhibitory). Chronic injection of pineal extract increased the tone of the inhibitory process among the excitable type of animals and was without substantial effect on the higher nervous activity of dogs of the strong, balanced type. Pineal extract raised the resistance of the cortical cells toward excitatory and inhibitory influences.--K.S.Ratner
