"The Influence of Some Vasoactive Substances on Breathing of Isolated Arteries (I. Polypeptides)."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 2, Feb 66, p 80

Abstract: Truncus pulmonalis requires less oxygen for breathing than the aorta, when referred to a unit of weight. Addition of Glycylvasopressin in a concentration of 1.10^{-7} M, and Physalaemin in a concentration of 1.10^{-6} M reduce the amount of the oxygen required. Angiotensin in a concentration of 1.10^{-6} M reduces oxygen required by truncus pulmonalis and blocks oxygen intake by the aorta. Experiments were conducted on rabbit arteries in vitro. No references. Submitted at "16 Days of Physiology" at Kosice, 29 Sep 65.

Investigation of the mechanism of the coking process by chemical change of the coal substance. N. Popovic, Bull. sci., Conseil acad. RPF Yugoslav. 1, 15 (1953) (in English). —By treating lignite at low pressure with a base of known concen., (which is not given) a coking material is obtained, which also yields a mixt., having coking properties, when mixed with raw lignite. By coking such material in the Bauer and Jenkner retort, the usual products of coking are obtained. The change of the material during coking is a process in which a decarboxylation of the humic acids takes place, whereby the no. of OH groups increases.

✓ 4350. INDUSTRIAL PROCESSES FOR IMPROVING LIGNITES. Popovic, N.
Prop. 184 C/11 to Sect. C, 5th Int'l Pur Conf., Vienna, 1956, Prepr., 8pp.).
The paper describes the processes of lignite improvement now applied in
Yugoslavia on an industrial scale. By autoclave-drying of lignite, a high-
grade lump lignite can be obtained which is fit for use as industrial domestic
and locomotive fuel. By addition of caking coal, the dried lignite can be
converted to useful coke; this is true for the low-temperature coke
obtained from lignite. (L).

AUTHOR: Popović, B. (S.A.T.)

TITLE: Elimination of area integrals from equations of planetary perturbations in vector elements

PERIODICAL: Referativnyy zhurnal, Astronomiya i Geodeziya, no. 2, 1962, 10,
abstract 2A102 ("Bilten Drusht. matem. i fiz. N. R. Makedoniya",
1959, v. 10, 29-38, Esperanto, Sérbo-Croatian summary)

TEXT: Ten (scalar) integrals of motion are known in the problem of n bodies. This makes it possible to reduce the order of the system of differential equations of motion by 10 units. In general, the order of the system can be reduced by 12 units, if the fact is taken into account that forces are independent of time and depend only on mutual distances between moving celestial bodies. However, the use of area integrals and integral of kinetic energy is not then easy, and unknown elements enter in combinations with various other quantities. The author reduces the order of the system by using all known integrals of motion and assuming as unknowns two vector elements: vector of sectorial velocity \vec{c} and vector of perihelion \vec{e} . In the first part of the paper, 6

Popović, Đorđe. Special perturbations of the vectorial elements of planetoid orbits.^{1/2} Bull. Soc. Math. Phys. Serbie 8 (1956), 47-52. (Esperanto. Serbo-Croatian summary)

The author eliminates the velocity from the Herrick-Popović equation for the eccentricity-vector in favor of the radius-vector and the derivative of the area-velocity. He arrives at a combination of equations which, if properly coded, can successfully be used in the computations of special perturbations, leading to results more directly than Musen's method.

Ponorić, Božidar. Sur un théorème relatif aux valeurs asymptotiques de l'intégrale de Laplace-Abel. Acad. Serbe. Bull. Acad. Sci. Mat. Nat. A. 7, 5-11 (1941).

This is concerned with Tauberian conditions on $A(t)$ in

$$J(\sigma) = \sigma \int_0^{\infty} t^{-\sigma} A(t) dt, \quad \sigma > 0,$$

sufficient to secure the validity of the inference from $J(\sigma) \sim \varphi(1/\sigma)$ to $\Gamma(\sigma+1)A(x) \sim \varphi(x)$ ($\sigma \rightarrow 0$; $x \rightarrow \infty$), where $\varphi(x) = x^s L(x)$ ($s > -1$) is a function of regular growth. A typical (known) sufficient condition is

$$(1) \quad \lim_{t \rightarrow \infty} t \left(A(t) - A(t') \right) / \varphi(t) \geq -w(\lambda)$$

($t' = t - \lambda$, $t \rightarrow \infty$), where $w(\lambda) \rightarrow 0$ as $\lambda \downarrow 1$. It is shown here that we may remove $\varphi(t)$ from the left hand side of (1), and transfer its effect to the length of interval over which t may range by changing V to $T = V[\lambda A(t)]$, where V is the function inverse to $A(t) = \exp \int_0^t u^{-1} \varphi(u) du$, provided that $\varphi(u) = u > 0$ ($u \geq 0$). This remark is developed in various ways, and an example is given to show that, in one instance at any rate, the result is nearly the best possible of its kind. Comparison with other work is not facilitated by the numbered references to the literature, since no bibliography is visible.

Popovitch, B.

Popovitch, B. La liaison des procédés de sommabilité avec les intervalles de convergence. Bull. Soc. Math. Phys. Serbie 1, no. 3-4, 121-130 (1949). (Serbian. French summary)

For each of 17 different functions $\Lambda(t)$, the author tabulates a function $T_\lambda(t)$ such that $\lim_{t \rightarrow \infty} (1/\Lambda(t)) \int_0^t s(h) d\Lambda(h) = s$ implies $\lim_{t \rightarrow \infty} s(t) = s$ whenever $s(t)$ satisfies a Tauberian condition (of E. Schmidt slowly-decreasing type) $\liminf_{t' \rightarrow t, t' > t} \{s(t') - s(t)\} \geq -w(\lambda)$, where t' is subject to the restriction $t \leq t' \leq T_\lambda(t)$ and $w(\lambda) \rightarrow 0$ as $\lambda \rightarrow 1^-$. The functions $\Lambda(t)$ considered involve logarithms, exponentials, iterated logarithms, and iterated exponentials in various ways. The functions $T_\lambda(t)$ are calculated from the known formula $T = V(\lambda \Lambda(t))$, V being the inverse function of Λ . [For an exposition of the subject, see Karamata, Sur les théorèmes inverses des procédés de sommabilité. Actuel. Sci. Ind., no. 450, Hermann, Paris, 1937.]

Popović, Božidar. Sur certaines théorèmes inverses de sommabilité de Cesàro. Srpska Akad. Nauka, Zbornik Radova, Knj. 7. Matematički Institut, Knj. 1, 83-90 (1951). (Serbo-Croatian. French summary)

Let k be a positive integer. Let $s(x)$ have bounded variation over each finite interval $0 \leq x \leq x_0$, and let

$$\frac{1}{x} \int_0^x \left(1 - \frac{t}{x}\right)^{k-1} s(t) dt = O(1)$$

as $x \rightarrow \infty$. Let $\varphi(x)$ be a monotone function for which $\varphi(x) \geq 1$ and $\varphi(x + x\varphi(x)^{-1/(k+1)}) \leq N\varphi(x)$ as $x \rightarrow \infty$. Let $s(x)$ satisfy, for $\epsilon > 0$, the Tauberian condition (of Robert Schmidt type) $s(x') - s(x) \leq -w(\epsilon)$ whenever

$$x \leq x' \leq x + \epsilon x/\varphi(x).$$

Then $s(x) = O([\varphi(x)]^{1/(k+1)})$ as $x \rightarrow \infty$.

✓ 2930. APPROXIMATE CALCULATION OF THE ORBIT ELEMENTS OF A SMALL PLANET ON THE BASIS OF THREE HELIOCENTRIC POSITIONS /F.B. Popovich.
Period. math.-phys. astron. [etc.], Vol. 11, No. 1, 45-61 (1958).
In Russian.

✓ Describes a short method of calculating the vector elements involved, when an accurate calculation is either not required or not possible. The simplification is applied to the stage following the finding of the three heliocentric positions. The approximation consists in substituting a circle (defined by the heliocentric positions) for the orbit. Six vector elements calculated by this method for the (331) Whit(e)more planet agree well with data obtained by the accurate method. P. Lachman.

"Current Problems of Parasitology in Serbia and Suggested
Action for Their Solution."

Belgrade, Glasnik Zavoda za Zdravstvenu Zastitu NR Srbije,
Vol 11, Nos 1-2, 1962, pp 33-49.

Abstract: Author's Serbo-Croatian summary modified. Para-
sites in humans are widespread in Serbia. *Trichinella spir-*
alis, *Echinococcus granulosus*, and *Leishmania donovani* are
particularly dangerous. The first order of business in the
fight against such parasites ought to be the planned con-
struction of water projects, toilets, slaughter houses,
marketplaces, and other communal projects, along with prop-
aganda urging the population to adopt hygienic habits.
The possibility of favorable results is shown by the suc-
cess of the campaign against malaria, which will soon have
eradicated the disease entirely. Table, charts, diagram.

Belgrade, Medicinski Glasnik, Vol 17, No 1, Jan 63; p 41.

Abstract : Report of meeting held in May 1962 in Bucharest with participants from Albania Bulgaria Cyprus Greece Rumania Turkey and Yugoslavia. Main problems discussed were venereal diseases, malaria, and epidemiology of staphylococcal infections. Various reports are summarized, e.g. incidence of malaria in above countries in 1961 was 77, 3, ?, 149, 28, 3454 and 57 respectively; insecticide resistance problems are worrisome. Next meeting in Sofia in 1964: tuberculosis, mycoses, rheumatism.

POPOVIC, D

621.317.362 : 621.317.755
4746. A contribution to power measurement with the
cathode-ray oscilloscope. V. Popović AND D. Popović
Elektroteh. Vestnik, 23, No. 1-2, 2-6 (1955). In
Serbian, with English translation pp. a1-a4.

The method of measurement, which is intended for
l.f. and h.f. ranges, consists in connecting one pair of
plates across the load and the other across a capacitor
in series with it. The area of the resulting ellipse is
then a measure of the power in the load. The presence
of the series capacitor alters the circuit conditions
but this can be countered by taking a series of measure-
ments with different values of capacitance and then
plotting $1/P$ against either (a) $1/C$ or (b) $1/C^2$, where
 P is the power and C is the capacitance. By extra-
polating, the value of P can be determined for $C = \infty$.
As the curve $1/P$ v. $1/C^2$ is a straight line, the extra-
polation is easy and reliable. Examples are worked
out for a resistance and an inductive load.

"Malaria, Antimalarial Measures and Implementation of the Campaign to Eradicate Malaria in the Peoples' Republic of Serbia."

Belgrade, Narodno Zdravlje, Vol 19, No 3, 1963; pp 97-102.

Abstract: A general historical review, status analysis and evaluation of future probabilities and plans regarding epidemiology of malaria in Serbia and Yugoslavia as a whole. From over 200,000 cases yearly in war years, new cases fell to virtually zero in 1962, due mainly to DDT residual spraying with WHO assistance and active therapy with effective drugs. Defects and inconsistencies in present patterns of battle against malaria are stressed, plans for 1963-1965 briefly outlines the main lines of attack. Map, 2 graphs, 5 tables.

"The Eradication of Malaria: Preparing Slides for Taking Blood Smears, Packing, and Shipping to the Field,"

Belgrade, Narodno Zdravstvo, Vol 19, No 2, 1963, pp 66-67.

Abstract: The authors insist on slides which are clean, smooth, of uniform size, and solidly durable. The idea that new slides are good for purposes of taking blood smears is erroneous, and the authors prescribe methods for cleaning new as well as used slides. Diagrams show how to pack slides for storage and shipment. No references.

Title : The Study of the Development of Simmenthal Calves During
the First Four Months of Their Life.
(Izuchenije razvitiya simmental'skikh telyat v pervyye
chetyre mesyatsa ikh zhizni).

Orig Pub : Veterinaria (Jugosl.), 1956, 5, No 4, 631-641.

Abstract : The measurements and weighing of Simmenthal calves
(67 heifers and 41 bulls) were carried out during 120
days. The doubling of the weight of the bulls occurred,
on the average, at the age of 51 days, and that of the
heifers at the age of 52 days, with the variation for
the former of 20-123 days and for the latter of 31-102
days. The intensiveness of the growth of the different
measurements of the animals was uneven.

Card 1/3

YUGOSLOAVIA/Farm Animals - Cattle.

Abs Jour : Ref Zhur - Biol., No 7, 1958, 30938

The measurements of the body and of the depth and width of the breast were increasing somewhat more rapidly than the height at the withers. As to their measurements, the animals of the Simmenthal breed of Yugoslavia were less conspicuous as compared with measurements of the same breed in other countries, as for instance in Germany. The body weight of heifers at birth was, on the average, 39.49 kg. (25-52 kg.), of bulls - 44.17 kg. (34-59 kg.), and at the age of 120 days it was 144.10 and 164.98 kg., respectively. The average daily rate of gain in heifers was 840 g. and in bulls 1,004 g. The height of bulls at the withers at the age of 120 days was 101.6 cm. and that of heifers 98.5 cm.; the circumference of the breast was 121.92 and 116.56 cm., the depth of the breast 24.80 and 25.95 cm., and the length of the body 98.58 and 102.07 cm.,
