operators. This solution shows that the r.m.s. output has two terms: one due to the random character of the input at a fixed value of random operator and the other allowing for the error due to the substitution of the real value of the operator with its evaluated value. The theory is applied to the problem of the process described by the slightly non-linear operator with two inputs and two outputs and finally to the practical determination of the characteristics of centerless, automatic grinding of roller bearing rings. There are 2 figures and 1 table.

Treatment."

Sofia, Eksperimentalna Meditsina i Morfologiya, Vol 2, No 1, Jan-Mar  
01: pp 33-38.

Abstract [English summary modified]: Experiments in 63 female guinea  
pigs, given s.c. 3500 - 10000 units of vitestrol (Bulgarian hemoestrol)  
weekly for up to 12 months in conjunction with castration and horse-serum  
sensitization by injection into uterine muscle. The varied hyperplasia  
and hyperfunctional changes are described, gross and histologic. Two  
specimen photographs, 3 photomicrographs; 9 Soviet and 9 Western refs.

operators. This solution shows that the r.m.s. output has two terms: one due to the random character of the input at a fixed value of random operator and the other allowing for the error due to the substitution of the real value of the operator with its evaluated value. The theory is applied to the problem of the process described by the slightly non-linear operator with two inputs and two outputs and finally to the practical determination of the characteristics of centerless, automatic grinding of roller bearing rings. There are 2 figures and 1 table.

Treatment."

Sofia, Eksperimentalna Meditsina i Morfologiya, Vol 2, No 1, Jan-Mar  
61: pp 33-38.

Abstract [English summary modified]: Experiments in 63 female guinea  
pigs, given s.c. 3500 - 10000 units of vitestrol (Bulgarian hemoestrol)  
weekly for up to 12 months in conjunction with castration and horse-serum  
sensitization by injection into uterine muscle. The varied hyperplasia  
and hyperfunctional changes are described, gross and histologic. Two  
specimen photographs, 3 photomicrographs; 9 Soviet and 9 Western refs.
