TEXT: On the example of production and application of trimethylol ethane and trimethylol propane in the USA, corresponding actual results and planned production in the USSR are discussed. Far-reaching possibilities of practical application in many branches of industry, and improved and more economic procedures are mentioned. In many cases, the use of trimethylol ethane and trimethylol propane instead of glycerin and pentaerythrite is of economic interest because of the reduced consumption of expensive raw materials. Basic investigations in this direction were made in the USSR by VNIINEftekhim in 1950. There are 2 tables. The three English-language references are: Ind. Eng. Chem. 50, No. 8 (1958); Chemistry in Canada, 12, No. 11, 38-42 (1961); Chem. Eng., No. 9, 41 (1961).

TITLE: The structure of polydimethacrylimides ^{1, 44, 55}

SOURCE: AN SSSR. Doklady, v. 164, no. 5, 1965, 1069-1072

TOPIC TAGS: polymer, plastic, acrylic polymer, polyacrylimide, structural analysis, infrared spectroscopy

ABSTRACT: From a comparison of infrared spectra with those of model compounds it was demonstrated that while deamination of N-alkylated polyacrylamides leads to formation of six-membered imide rings in the polymer chain, polymerization of N-alkylated dimethacrylimides yield a polymer whose chain contains five-membered imide rings. This suggests head-to-head polymerization of dimethacrylimides: Unsubstituted dimethacrylimide, bearing no substituent at the nitrogen atom, constitutes an exception to the above. Orig. art. has: 2 tables and 1 figure. [VS]

TITLE: Kiyev Peaches (Kiyevskiye persiki)
PERIODICAL: Priroda, 1958, Nr 5, pp 101 - 102 (USSR)

ABSTRACT: Peaches in the northern part of the Ukraine, the seedlings of which had been imported from southern areas, soon perished, usually after the first fruiting. There were no local varieties, and the southern varieties could not be adopted to conditions beyond their northernmost area of occurrence. Between 1914 and 1935, N.F. Kashchenko grew several generations of peaches from seeds obtained from North Ukrainian gardening amateurs. The seedlings were left without protection against frost, insect and other pest, nor did Kashchenko interfere with the top growth, except the removal of withering and dead branches. The 2 varieties, August Kashchenko 163 and August Kashchenko 118, from seedlings of Kashchenko's 3rd generation were introduced into the standard assortment of fruit and berries of the Ukrainian SSR by the Ukrainian Ministry of Agriculture in 1935. Since then the Akklimatizatsionnyy sad

imeni N.F. Kashchenko Botanicheskogo sada AN USSR (The Acclimatization Garden imeni N.F. Kashchenko of the Botanical Garden of the AS Ukr SSR) has further developed new and better peach varieties from later generations of Kashchenko's strains. Special hybrids from Kashchenko varieties and nectarines yielded peaches of up to 250 g in weight. Since then, more varieties have been included in the standard assortment. Peaches have been cultivated since 1948 in the Kiyev, Khar'kov, Vin-nitsa, Khmel'nitzkiy, Zaporozh'ye and other oblast's.

ABSTRACT : In the acclimatization orchard of the Academy of Sciences
of Christian USSR, there was selected under No. 1150 the
largest-fruited (the weight of the fruit - 200 g) and the
highest quality yellow-pulp berry. The tree aged 6 years
produced 317 fruits which ripened in the middle of Sep-
tember. The blossoming of the trees is late; the yield -
regular.

 TITLE : Increasing the Frost Resistance by Top Grafting

ORIG. PUB. : Sadovodstvo, vinogradarstvo i vinideliye Moldavii, 1957, No 2, 24-25

ABSTRACT : To enhance resistance to winter injury (frost cracks, scolds and mechanical damage to the trunk) and to establish long lasting plantings of fruit trees, it is recommended to adopt the procedure, widely utilized in the Ukraine, of bud-grafting of cultivated varieties into the top of a wild stock plant, during summertime, on the inside or outside of a branch, at least 30-35 cm from the trunk. -- P. Kh. Kiskin.

"An Attempt at Evaluation of the "Enzymologic Serohepatic Index" for Differential Diagnosis of Epidemic Hepatitis"

Warsaw, Przegląd Epidemiologiczny, Vol 20, No 2, 1966, pp 138-141.

Abstract: Determinations of GOT and GPT transaminase activities were made simultaneously in material obtained by liver puncture and in the serum in 36 patients with epidemic hepatitis, 16 patients with obstructive jaundice of various etiology, and in a control group of 8 persons in whom liver puncture did not show any significant histopathologic changes. The "serohepatic index" of the enzymes, obtained by computing the value of GOT/GPT in tissues was compared.

"Chronic Viral Hepatitis Treated Surgically by Denervation of Hepatic Artery. Case Report."

Warsaw, Polski Tygodnik Lekarski, Vol 13, No 32, 5 Aug 63, pp 1196-1199

Abstract: [Authors' English summary] Authors report a case of a 64-year old woman suffering from severe viral hepatitis, followed by chronic hepatitis and cirrhosis of the liver. Patient was treated by denervation of hepatic artery, and her clinical condition four months after the operation is good. Authors discuss the value of this kind of treatment. There are 11 references: 3 Polish, 2 German, and 6 French.

RULEV, B. G.

In their article, "Electrodynamic Seismograph Recording Major Movements," D. A. Kharin and B. G. Rulev of the Institute of Physics of the Earth, Academy of Sciences USSR, describe an electrodynamic seismograph developed for the registration of seismic movements with an amplitude of from one up to 100 mm in a frequency range of from 1.5 to 50 cycles. A diagram of the transmitting element of the instrument and a photograph of the instrument are included. The instrument can be used to register horizontal oscillations, and by rotation of the body around the horizontal axis-vertical oscillations. "Treatment of Neurotic Symptoms in Cerebral Arteriosclerosis"

Prague, Ceskoslovenska Psychiatrie, Vol LIX, No 2, April 63,
pp. 85-91.

Abstract [Authors' English summary, modified]: Changes in the
behavior, experiencing and mental performance in 10 (9) pa-
tients suffering from cerebral arteriosclerosis following
application of placebo and 20 Vasolastin injections were
studied by means of a special questionnaire and 5 substitu-
tive variants comprising five psychological methods. Results
showed a marked improvement in sleep and headaches, recession
of anxiety, consolidation of mood, and improvement in psycho-
motility. Evaluation of the effect of treatment was essentially
in agreement with clinical observation and assessment. Con-
clusion: Application of Vasolastin is justified. Nine referen-
ces, including 2 Czech.

TITLE: Edging Rectangular Holes

PERIODICAL: Kuznechno-shtampovochnoye proizvodstvo, 1960, No. 9, pp. 5 - 8

TEXT: A new method of edging rectangular holes in sheet steel parts is described. It has been suggested by Engineer V.S. Remenik of Kiyevskoye opytno-konstruktorskoye byuro trgovogo mashinostroyeniya (Kiyev Experiment Design Bureau of Commercial Machine-Building) and eliminates the necessity of using multi-operation extrusion with wide flange and subsequent punching of the bottom, which takes many expensive dies and cannot be used for making decorative parts because of traces left on the metal. The authors (including the inventor) have developed calculation formulas for the possible edging depth, the shape and dimensions of the hole (before edging), fundamental relations showing if the method can be used in a given case, and the permissible correlation of the fundamental parameters. The method makes possible edging rectangular holes in a single press stroke and obtaining a relatively high edge with small transition radius on the corners. The essence of the method is formation of the edge by displacement of metal from

SOURCE: Elektricheskiye stantsii, no. 5, 1965, 93

TOPIC TAGS: electric engineering, electric engineering personnel

ABSTRACT: An engineer since 1929, A. B. Chernin has worked for years in developing new techniques and equipment for relay protection of electric power systems. In this 60th birthday tribute, he is credited with leading the group which produced the directives on relay protection, contributing to the development of a method for calculating transient processes in long distance 400-500 kv power transmission lines and with aiding in planning of the electric portions of power stations, substations and power systems. The results of his engineering and scientific work have been published 46 times, he is a doctor of technical sciences (since 1963), and has taught for 30 years at the Moscow Power Institute. TITLE: Automatic control device for spot welding light-weight alloys

SOURCE: Svarochnoye proizvodstvo, no. 5, 1966, 37

TOPIC TAGS: welding equipment, control circuit, electronic signal

ABSTRACT: The device (model AKS-3) signals deviations from electrode pressure, current value, duration of the weld time within the ranges allowable for the MTIP and MTPT welding machines within the following limits: electrode pressure-- $\pm 10\%$, current value-- $\pm 5\%$, weld time-- ± 0.001 sec. Electrode pressure is measured by an electrocontact pick-up. The contacts of the pickup are attached to the grid circuit of the electronic relay which measures deviations from set limits for the electrode pressure. Deviations are indicated by signal lights on the control panel. The welding current control unit signals deviations from the desired amplitude of the weld current. A magnetic amplifier is used as a null indicator of the second harmonic. The measured signal is obtained from the terminals off a shunt in the main circuit of the welding transformer and goes to the control winding of the magnetic amplifier. A signal is al-
