TITLE: Design and research problems of turbine-type transmitters of flow meters

SOURCE: Technika lotnicza i astronautyczna, no. 7, 1966, 12-19

TOPIC TAGS: turbine^{type} transmitter, flow meter, flow meter transmitter

ABSTRACT: The specifications for the Soviet DR-2B, DRM, RTS-16, and RTMS transmitters (the last two used for aircraft fuel flow meters) and six Polish transmitters are given. Some results of the testing and investigating various flow meters and flow meter transmitters, carried out at the Institute of Aeronautics in Warsaw, are included. Orig. art. has: 5 figures.

TITLE: The problem of the time constant of the pickup of a turbine flow meter

SOURCE: Warsaw. Instytut lotnictwa. Prace, no. 25, 1965, 17-23

TOPIC TAGS: flow meter, time constant, turbine flow meter, ~~AIRCRAFT ENGINE~~

ABSTRACT: The theoretical considerations contained in the present paper are concerned with dynamic problems of the pickup unit of a turbine flow meter and are connected with the research work on flow meters in the Department of Aircraft Instruments of the I. L. (Institute of Aeronautics). The numerical data quoted are those published by flow-meter producing firms or from technical literature on the subject. This work was evaluated by Victor Roth, Master of Arts, Engineer. Orig. art. has: 7 figures, 1 table, and 16 formulas. [Author's abstract.] [KS]

TITLE: A Model Investigation of the Processes of Settling and Carrying-out of Dust in Steel-melting Furnaces (Issledovaniye na stende protsessov osedaniya i vynosa pyli v staleplavil'nykh pechakh)

PERIODICAL: Nauchnyye doklady vysshey shkoly. Metallurgiya, 1959, Nr 2, pp 84-89 (USSR)

ABSTRACT: The model of a steel-melting furnace was made of plexiglass on a scale of 1 : 15 (Fig 1). The air supply working as a model of the gas circulation could be blown in, as in the original, as a direct current with unilateral and double return flow. To imitate the coarse-grained dust, water was introduced into the tank of the model, and air was blown in by a series of tubes under the water surface. The drops carried away were collected in 14 measuring points (Fig 2) by means of rolls of filter paper. For the finer dust fraction, the metal level of the tank was represented by a metal foil with 25 openings by which overheated vapor was blown and then was absorbed in the measuring points by cartridges of powdered sugar. Figures 3-5 show the dust settling under

Card 1/2

A Model Investigation of the Processes of Settling and Carrying-out of
Dust in Steel-melting Furnaces

different conditions of circulation. In direct blowing and with a unilateral return flow, the maximum of dust settling lies opposite to the flame. In the cross section, the dust settles for the most part in the lower section of the side walls. With the double return flow, the maximum of dust settling lies in the meeting point of the two flames. The settling of the coarse dust fraction proceeds more irregularly than that of the fine dust. By reversing the flame, the dust settling does not change, but it becomes more regular. In case of a gas return flow, only fine dust is carried out of the furnace. The maximum dust escape from the furnace is produced by direct blowing; the minimum in case of a double return flow. There are 5 figures.

TITLE: New type of softener with an aromatic base B

SOURCE: Kauchuk i rezina, no. 3, 1966, 16-18

TOPIC TAGS: rubber chemical, petroleum product, plasticizer

ABSTRACT: In order to broaden the source of raw materials for the rubber industry, an extract named "azaroplast" (Azerbaijani aromatic plasticizer), obtained from the furfural purification of lubricating oils of Baku crudes, was tested as a softener. Azaroplast was tested in comparison with other commonly used softeners in standard mixes based on NK natural rubber and butadiene-styrene¹⁵ SKS-30ARK rubber and in a tread mix consisting of 70% SKS-30ARK and 30% NK. The tests showed azaroplast to surpass the other softeners in plasticizing effect. The vulcanization rate of mixes containing azaroplast was practically the same as that of mixes with the other softeners. Vulcanizates of standard mixes based on NK and SKS-30ARK and containing azaroplast had increased strength characteristics. Replacement of mazut with azaroplast in tread mixes will permit a considerable increase in the extrusion rate and produce higher strength

TITLE: A method for determining the maximum temperature in heat treatment of carbonaceous material. Class 12, No. 170040

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 8, 1965, 16-17

TOPIC TAGS: carbon, temperature measurement

ABSTRACT: This Author's Certificate introduces a method for determining the maximum temperature in heat treatment of a carbonaceous material. A sample of the material is heated under a load of no less than 15 kg/cm² and the maximum temperature is determined from the point where the sample begins to be deformed.

TITLE: Pilot model of 500 megawatt power unit
JOURNAL: Energetik, no. 8, 1966, 4-6
TOPIC TAGS: steam boiler, steam turbine, electric power plant
ABSTRACT: A 500 megawatt power unit is being assembled at the Nazarovskaya Regional Electric Power Station. It is the pilot model for a large series of units for high power electric stations planned to be built to utilize the rich coal deposits of the Kansk-Achinsk Basin. The unit consists of two 600 ton-per-hour steam boilers and a single shaft steam turbine of 500 megawatts capacity designed for steam parameters of 240 atmospheres (at the turbine at 560°C with one intermediate heating of the steam to 565°C. One of the principle new features of the turbine unit is its usage of a central system of coal powder preparation with preliminary drying of the coal in steam dryers heated by off flow steam from the turbine. The advantages of this system are fuel economy due to increased thermodynamic efficiency and increased reliability due to constant moisture content of the fuel. A cross sectional diagram of the six-level building in which the unit is placed is presented. The main body and coal grinding plant are built of precast reinforced concrete. The unit was designed for maximal usage of standard plans for a coal burning regional power station and maximal usage of unified reinforced concrete parts for construction of thermal electric power station with the least number of standard dimensions. Teploelektroprojekt)

TITLE: First model of 500 megawatt power unit

SOURCE: Teploenergetika, no. 11, 1966, 4-8

TOPIC TAGS: electric power plant, steam power plant

ABSTRACT: The plan decisions are presented for installation of the first model of the 500 megawatt power unit installed at the Nazarovskaya Regional Electric Power Station. The primary point of discussion before construction of the unit was preparation of the fuel. A centralized fuel powder preparation system with preliminary drying of the coal in steam dryers heated by off-flow steam from the turbine was adopted. One stage of steam reduction in cooling is used, designed for 30% steam generating plant load. The reduction unit automatically switches on when temperature before the turbine reaches 252 atm. The complex design of the steam generating unit and turbine are said to be suitable only for a first, experimental model. Cross sectional diagrams of the main building housing the steam generating and turbine plant, of the central powder mill plus a diagram of the operation of the central powder mill are presented. Although the unit is controlled by computer, it was designed so that the operator has sufficient information at hand to control manually when necessary. Also, the individual devices are autonomous in their control in case of a failure in the control system. In order to facilitate

Serov, M. I. Remark on the number of zeros of the solution of a linear differential equation of the second order. Uspehi Matem. Nauk (N.S.) 6, no. 6(46), 182-183 (1951). (Russian)

The equation $y'' + q(x)y = \lambda y$ is considered with $q(x)$ a complex-valued function of the real variable x and λ complex. Let $u = \operatorname{Im} q(x)$ be continuous in the interval (A, B) , finite or infinite, and not equal to a constant in any segment of this interval. Let the sum of the number of points in the interval where u is a maximum or minimum be n . Then it is shown that for no value of λ can a solution of the differential equation have more than $2n+3$ zeros in the interval (A, B) .

The proof uses the equation

$$\operatorname{Im} \lambda \int_a^b |y_0|^2 dx = \int_a^b u(x) |y_0|^2 dx,$$

valid for a solution $y_0(x)$ which vanishes at a and b .

AUTHOR: Serov, M.I.TITLE: Certain Properties of the Spectrum of a Non-selfadjoint
Differential Second-order Operator

PERIODICAL: Doklady Akademii nauk SSSR, 1960, Vol 131, Nr 1, pp 27-29 (USSR)

ABSTRACT: The author considers

$$(1) \quad y'' + p(x)y' + [q(x) - \lambda]y = 0, \quad p(x+1) = p(x),$$

$$q(x+1) = q(x)$$

As it is well-known [Ref 1] there exists for every λ a solution $y(x)$ with the property $y(x+1) = sy(x)$, where s is one of the roots s_1, s_2 of the equation

$$(2) \quad s^2 - F(\lambda)s + \exp\left[-\int_0^1 p(x)dx\right] = 0.$$

The author denotes λ as a point of the type " $+$ ", if $|s_1|, |s_2|$ are both larger or both smaller than 1, otherwise λ

Card 1/2

X

68797

Certain Properties of the Spectrum of a
Non-selfadjoint Differential Second-order Operator

S/020/60/131/01/006/060

is a point of the type " - " .

The author formulates several properties which are connected
with these notions, e.g. if

$$\int_0^1 \operatorname{Re} p(x)dx = 0, \text{ then the set of}$$

the points of the type " + " is empty. Similar problems are
treated for operators which are defined on $[0,1]$ by (1) and
by the boundary conditions

$$(3) \quad y(1) = e^{it} y(0); \quad y'(1) = e^{it} y'(0).$$

There are 3 references, 2 of which are Soviet, and 1 German.

TITLE: On the spectrum of a non-selfadjoint operator

PERIODICAL: Referativnyy zhurnal, Matematika, no 11, 1961 21,
abstract 11B103 (Uch. zap. Yelabuzhsk gos ped in-ta
1959, 7, 23 - 39)TEXT: The point λ_0 is called a point of the spectrum of the
equation

$$y'' + p(x)y' + [q(x) - \lambda]y = 0. \quad (*)$$

where $p(x)$, $q(x)$ are continuous complex functions with the period 1.
if (*) for $\lambda = \lambda_0$ possesses a solution bounded on $-\infty < x < \infty$. With
different words: That set is called the spectrum which is formed by
all eigenvalues $\lambda_n(t)$ of the operator $L_t(y)$, if t changes from 0 up
to 2π ; thereby $L_t(y)$ is determined by the equation (*) and by the
boundary conditions:

$$y(1) = e^{it}y(0), \quad y'(1) = e^{it}y'(0).$$

Theorem 1: For certain j, h let be $\lambda_j(t_1) = \lambda_h(t_2)$.

Card 1/4

J2490

S/044/61/000/011/009/049

C111/C444

On the spectrum of a non-selfadjoint.

a) If $\int_0^1 \operatorname{Re} p(x)dx \neq 0$, then $t_1 - t_2 = 2k\pi$ and the operators L_{t_1} and L_{t_2} and consequently their spectra are identical.

b) If $\int_0^1 \operatorname{Re} p(x)dx = 0$, then besides of the identity of the operators it is possible that $t_1 - t_2 = 2k\pi + \int_0^1 p(x)dx$. In this case the operators L_{t_1} and L_{t_2} are not identical, but their spectra are still identical.

The point λ is of the type (+), if the multiplicators of (:) lie both inside or both outside of the unit circle; λ is of the type (-) if one of the multiplicators lies inside and the other one outside of the unit circle. Let be

$\int_0^1 \operatorname{Re} p(x)dx \neq 0$

Card 2/4

S/044/61/000/011/009/049
C111/C444

On the spectrum of a non-selfadjoint...

Then there exists in every neighborhood of a spectral point a point of the type (+) as well as other points of the type (-), and every domain of the points of the type (-) is unbounded. From this fact one obtains several statements on the possible topological structure of the spectrum. One also investigates certain metrical properties of the spectrum; it is especially shown that every component of the spectrum has a non-empty intersection with the stripe

$$\min \operatorname{Im} \left[q(x) - \frac{p(x)^2}{4} - \frac{p'(x)}{2} \right] < \\ < \operatorname{Im} \lambda < \max \operatorname{Im} \left[q(x) - \frac{p(x)^2}{4} - \frac{p'(x)}{2} \right].$$

By using the ideas of I. M. Gel'fand (Dokl. ANSSSR, 1950, 23, 6) it is shown: For every continuous function, vanishing outside of an interval, there holds the expansion,

$$f(x) = \int_0^{2x} \left[\sum_{n=0}^{\infty} a_n(t) e_{n+1}(t) \right] dt.$$

where

$$a_n(t) = \int_{-\infty}^{+\infty} f(u) e_{n+1}(u) du.$$

Card 3/4

S/044/61/000/011/009/049
C111/C444

On the spectrum of a non-selfadjoint...
and $y_{n,t}(x)$ is the normed system of the eigenfunctions of L_t , $z_{n,t}(x)$ is the normed system of the eigenfunctions of the adjoint operator. The sets of the values t , for which L_t , L_t^* possess multiple eigenvalues, and for which the corresponding systems of the eigenfunctions eventually are incomplete, are sets of measure zero.
