Zapocitavani dodavek zemedelskych vyrobku r. 1957. (Control of the Compulsory Deliveries of Agricultural Produce in 1957. 1st ed.) Prague, SZN, 1957. 67 p.

Bulk-buying of agricultural produce constitutes one of the main commercial relations between the village and town. A correct estimation of the quality and price of the delivered produce and the control of deliveries is of great importance. The pamphlet contains a comprehensive survey of the control methods based on many examples.

POL. 2

2031  
678.1.022.168 : 600.01 : 001.31  
Skalicka A. The Application of Sulphite Liquors in the Building Materials and Building Industries.  
„Zastosowanie lugów poslarczynowych w przemyśle materialów budowlanych i w budownictwie”. Przegląd Paplerniczy, t. 5, 1963, pp. 142-143.

Investigations were conducted over the problem of utilising sulphite liquors for reducing the water content of cement slurry. This reduction makes a contribution to economising fuel in burning clinker. By adding to the slurry 3% of thin sulphite liquor (10% dry substance) and 2% of granulated slag, it was found possible to reduce the water content in „Wiek” cement slurry by from 6 to 7%. It was also found that concentrated sulphite liquor (50% dry substance) is well suited for this purpose. Attention is drawn to the possibility of employing sulphite liquor as a means of increasing the plasticity of concrete. This requires, however, careful dosage; the amount of sulphite liquor added in relation to the dry weight should not exceed 0.3%. It is also possible to use powdered sulphite liquor in the building and cement industries.

SKALICKA, ANNA

Plasticity in the technology of cement, mortars, and concrete manufacture. Anna Skalicka (Inst. Tech. Kikemi-anów, Warsaw). *Cement-Ważno-Gips* 9(18), 231-8(1953). —S. established tentatively the proper amt. of olive oil (I) or waste liquors from paper mills which have to be added to Polish cements and concretes to increase their plasticity. Best results were obtained by the addn. of I to clinker during grinding. When I in cement no. 350 (II) from "Credziec" increased from 0 to 0.3% then plasticity increased from 19.2 to 17.6 cm. while compressive strength of II after 18 days dropped only from 438 to 421 kg./sq. cm. Although plasticity was even higher, reaching 21 cm. when paper mill waste, i.e. sulfite liquors in powder form or as 10.5% soln., were used as additives, compressive strength dropped considerably to 277 and 391 kg./sq. cm., resp. Experimentation is still continued as the results are not yet conclusive. Frank J. Hendel

"The Use of Chloroquin in Extrasystolic Bigeminal and Trigeminal  
Rhythm."

Prague, Casopis Lekarů Ceských, Vol 102, No 45, 1963, pp 1252 -  
1253

Abstract: Report describes treatment of 6 patients; 4 were cured.  
Chloroquin is a synthetic antimalaria drug used also in skin and  
rheumatic diseases. Chloroquin diphosphate was used in pills con-  
taining each 250 mg. 500 mg was used in initial dosis, increased  
to 750 mg in 3 days and to 1000 mg after 3 more days. If no cure  
was obtained by then, it was assumed that the treatment was un-  
successful. Improved condition of patients was maintained by a  
dosis of 250 mg daily. 1 Table, 4 Western, 1 Czech, 1 Russian,  
1 Indian reference.

"Metabolism of N-acetylneuraminic Acid in Mental Diseases."

Prague, Casopis Lekarů Ceskych, Vol 102, No 8, 22 Feb 63; pp 215-216.

Abstract [English summary modified]: Determination of o-sialic acid levels in 225 persons in CSF and in blood; lowest levels were in 9 patients with degenerative diseases (2.08 mg./100 ml. CSF) and in schizophrenia (62 patients, 2.12 average) Comprehensive discussion of these and other results and their significance. Decrease is considered to be due to lowered synthesis and increase toward normal levels should parallel clinical improvements during therapy. Chemical structure, table; 6 Czech (including thesis and 1 other unpublished), 1 Soviet and 37 Western references.
