Title : New Method for the Synthesis of Peptides Via
Symmetric Anhydrides of N-Substituted Amino Acids

Orig. Pub. : Roczniki Chem, 32, No 4, 813-819 (1958)

Abstract : The authors describe a new method for the synthesis of dipeptides from tosyl- or phthalylamino acids (I) and the hydrochlorides (HC) of amino acid esters (II) in the presence of benzenesulfonyl chloride (III). A mixture of 1 mmol I and 1-2 mmols II in 1-3 ml anhydrous C_6H_6 is treated with 1 mmol III with cooling and left to stand 1-20 hrs at 20°; the reaction product is precipitated with water. The primary and secondary components, the amounts used (in mmols), the

SOURCE: Roczniki chemii - annales societatis chimicae polonorum, v. 40, no. 1, 1966, 133-134

TOPIC TAGS: chemical synthesis, solvent action, temperature effect, chemical reaction

ABSTRACT: It has been found that the substitution reaction of peptides from racemic substrates gives rise to unequal amounts of diastereoisomeric racemates L - L / D - D and L - D / DL. Process temperature and the solvent used exert an effect on stereoselectivity. Orig. art. has: 1 table. [JPRS: 35,397]

Warsaw, Roczniki Chemii, Vol 40, No 2, 1966, pp 199 - 203

Abstract (Author's English abstract modified): Mixtures of stereoisomers of N-(α -bromoacyl)-aminoacids were resolved by crystallization into two racemates: L-L/D-D and L-D/D-L. The relative configuration of the two asymmetric carbon atoms was determined in these racemic compounds.

"Loss of Denial dystrophy in a Patient with Fibrous Change
of the Lung."

Krakow, Polski Tygodnik Lekarski, Vol 17, no 11, 17 Dec 62,
pp 199-199.

Abstract: [Abstract] English summary] case of a woman with
denial dystrophy with marked vegetative disorders is re-
ported. X-ray examinations revealed fibrous changes of un-
known etiology in the right lung. Some laboratory tests
and histological examination of the muscles were made.
The relation between the denial dystrophy and the reported
changes in the lungs is discussed. Of the 11 references,
four are Polish, four German, two French, and one Italian.

AUTHORS: Sokołowski, Janusz and Pilarski, Zenon

TITLE: The selective deacetylation of N-acetyl-N-2,3,4,6-tetra-O-acetyl-D-glucopyranosyl-p-aminobenzene (A) by means of amines

SOURCE: Danzig. Wyższa Szkoła Pedagogiczna. Zeszyty naukowe. Matematyka, fizyka, chemia, v. 1, 1961. Danzig, 1962, 107 - 109

TEXT: The present study was carried out in view of the difficulty in deacetylating selectively O-acetyl groups in pentaacetyl-N-glucoside and similar compounds. The authors attempted to deacetylate A with stoichiometric quantities of aniline, ammonia, cyclohexylamine, dimethylamine, and piperidine, at temperatures varying from 20 to 65°C and over periods of 1 to 48 hours. The procedure consisted of preparing methanolic solutions of pentaacetyl-N-D-glucosyl-p-aminobenzene and the primary or secondary amine (in amounts exceeding by 5% those

The selective deacetylation ...

calculated for the deacetylation of O-acetyl groups), maintaining the mixture at the set temperature for the required length of time, and distilling off (at room temperature and 15 mm Hg) the solvent and the unreacted amine. The dry residue was then analyzed by paper chromatography, using water at 20°C as the nonstationary phase. N-acetyl-N-glucoside and a small quantity of h-D-glucosyl-4-amino-azobenzene were found. The optimum results were attained with dimethylamine (~ 98% of N-acetyl-N-glucoside) over 9 hrs at 20°C; completely negative results were obtained with aniline. In general nonaromatic amines and ammonia attack the O-acetyl groups in preference to the N-acetyl, although complete selectivity was not achieved in any instance. The rate of deacetylation increased with temperature and with the basic strength of the amine, suggesting a nucleophilic mechanism of the rupture of N-acetyl and O-acetyl bonds. Oxidation of the deacetylation products with sodium metaperiodate demonstrated the existence of a pyranosidic ring in N-acetyl-N-glucoside. There is 1 table.
