PHASE I BOOK EXPLOITATION CZECH/1251

Strnad, Julius, Professor, Doctor, Engineer, Corresponding Member,
Czechoslovak Academy of Sciences

Thyratrony (Thyratrons) Prague, SNTL, 1954. 231 p. 2,200 copies
printed.

Reviewers: Lupínek, Miroslav, Engineer, Doctor; Mareš, Přemysl;
Promberger, Miroslav, Engineer, Doctor; Ed.: Karen, Ota, Engineer;
Chief Ed. for Literature on Electrical Engineering: Kašpar,
František, Engineer, Doctor.

PURPOSE: The book is intended for industrial equipment operators and
technicians interested in control equipment.

COVERAGE: The author gives general information on the construction and
operation of thyratrons. He also discusses their most important
applications. No personalities are mentioned. There are 21
references, of which 5 are Czech, 5 Soviet, 9 English, 1 German
and 1 French.

Card 1/5

Thyratrons

1251

TABLE OF CONTENTS:

Foreword	5
Table of Contents:	7
I. Introduction	9
1. Principle of thyatron operation	9
2. Thyatron characteristics	11
3. Ionization time	13
4. De-ionization time	15
5. Important operational parameters of thyatrons	19
6. Thyatron cathodes	21
7. Newest constructional elements	25
8. Construction of a thyatron	27
9. Thyatrons used in radar	30
10. Operating specifications of standard thyatrons	34
II. Thyatron Operation	36
11. Thyatrons with d-c plate voltage excitation. Control grid with d-c voltage excitation	36

Card 2/5

Thyratrons

1251

12.	Thyratrons with a-c plate voltage excitation. Determining critical firing voltage from critical grid-voltage curve	39
13.	Resistive and inductive loads of a thyatron	40
14.	Antiparallel circuits	45
III.	Control of Thyatron Operation	47
15.	Firing the thyatron by varying the plate voltage and keeping grid voltage constant	47
16.	Controlling thyatron operation with a-c voltages	47
17.	Firing the thyatron by varying the d-c grid voltage and keeping the a-c plate voltage constant	49
18.	Controlling thyatron operation by varying the amplitude of control-grid a-c voltages	51
19.	Firing the thyatron by varying the d-c grid voltage superimposed on a constant a-c grid voltage and keeping the phase angle and a-c plate voltage constant	53
20.	Controlling thyatron operation by varying the phase angle between the plate and grid voltages	56

Card 3/5

Thyratrons	1251
21. Starting the thyatron by varying the phase angle	58
Phase-angle changer (booster)	58
Bridge circuits	60
Resistance-capacitance coupled circuit	61
Resistance-inductance coupled circuit	67
Other methods of varying the phase angle	76
22. Controlling thyatron operation by applying current pulses to the grid	78
23. Other methods of controlling thyatron operation	85
IV. Applications of Thyratrons	87
24. Thyatron as a control rectifier	87
25. Photoelectric relay with simple coupling control circuits	71
26. Electronically operated doors	104
27. Self-synchronization of rotating parts	105
28. Clock coupling circuits	106
29. Thyatron as a sawtooth-wave generator	115
30. Inverters	123
V. Electronic Regulation and Control	128
31. Generator voltage regulators	128
32. Heat controllers	130

Card 4/5

Thyratrons	1251
33. Electronic control of lighting	133
34. Electronic control of resistance welding	147
35. Transmission-line protection	156
36. Electronic control of industrial processes	160
37. Principle of operation of a duplicating-milling machine with electronic control	186
38. Principle of electronic control of motor speed	188
VI. Conclusion	
VII. Appendix. Standard Types of Thyratrons, Their Specifications and Characteristics	203

PHASE I BOOK EXPLOITATION

CZECH/2513

Strnad, Julius, Engineer, Professor, Doctor

Technicka elektronika (Electronics) Praha, S.N.T.L., 1957. 336 p. 6,200 copies printed.

Reviewer: Jindřich Forejt, Doctor of Natural Sciences; Resp. Ed.: Jan Nohejl, Engineer, Doctor; Managing Ed. for literature on Electrical Engineering: František Kašpar, Engineer, Doctor.

PURPOSE: This book is intended for engineers and technicians working with industrial electronic equipment.

COVERAGE: The author discusses the construction and operation of circuit components such as resistors, capacitors, inductors, saturable reactors, magnetic amplifiers, vacuum tubes, stabilizers, thyratrons, glow-discharge tubes and ignitrons. He also describes the operation of electronic relays, switches, counters and industrial control circuits. The author thanks J. Forejt, Doctor of Natural Sciences, Dean of the Low-voltage Department at CVUT, Pobebrady, for reviewing the text. There are 26 references: 8 Czech, 5 German, 10 English, 1 Soviet, 1 Polish and 1 French.

AUTHOR: J.B. Slavík (Professor, Doctor of Natural Sciences) and
Julius Strnad (Professor)

TITLE: Professor Doctor of Natural Sciences J.B. Slavík
on the Occasion of his own 60th Anniversary

PERIODICAL: Slaboproudý Obzor, 1960, Vol 21, Nr 3, pp 184-185

ABSTRACT: In this brief note he appeals to the Editorial Board
that if anything is to be published on the occasion of
his 60th birthday, his letter should be published
which states categorically that he is not in favour of
any commemoration articles. ✓

Professor J. Strnad adds a few notes on his knowledge
of and association with Professor Slavík as a man, and
does not discuss any of his scientific achievements.

"An Interesting Case of Sexual Aberration in a Feeble-Minded Person"

Prague, Ceskoslovenska Psychiatrie, Vol LIX, No 3, June 63, pp 176-181.

Abstract [authors' German summary]: Reported is an unusual case of fetishism in a feeble-minded person. First, it looked like an obsession neurosis, and the impulsive nature of the disturbance became clear only after a thorough examination. Clinical picture showed an admixture of other aberrations, the sadomasochism and narcissism, which are typical for sexual deviations. Remarkable is the fact that social difficulties, resulting from the deviation, were of such an extent that the patient asked for a permanent hospitalization in a mental institution as the best solution. TITLE: Contribution to the psychiatric problem of the pathological conviction about the incontinence of intestinal gases

SOURCE: Ceskoslovenska psychiatrie, no. 2, 1965, 113-118

TOPIC TAGS: psychopathology, intestinal disease

ABSTRACT:

Theoretical synopsis of psychopathological evaluation of the syndrome of morbid conviction about incontinence of intestinal gases is presented. Two cases are described; one fits into the frame of the decompensation of a psychopathic personality, and the other has the character of a hallucinatory paranoid psychosis. The fatal importance of the syndrome for the life of the patients is evaluated, and early diagnostic symptoms analyzed. [JPRS]

"Alimenazine, Chlordiazepoxide, Meprobamate, and Placobo in Anxious Depression Therapy."

Prague, Activitas Nervosa Superior, Vol 8, No 4, Nov 66, pp 437 - 438

Abstract: Effect of the compounds mentioned in the treatment of 24 patients suffering from neuroses is described. The results were evaluated on the basis of the Knobloch AD questionnaire. The score of complaints before any treatment was 1385, after administration of a placebo 1104, with alimenazine 853, with chlordiazepoxide 812, and with meprobamate 779. 1 Table, 12 Western, 6 Czech, 1 Japanese reference. Submitted at the 8th Annual Psychopharmacological Meeting at Jesenik, 18 - 22 Jan 66. Article is in English.

TITLE: On the thermal conductivity of indium

SOURCE: Fizika metallov i metallovedeniye, v. 15, no. 5, 1963, 800

TOPIC TAGS: indium, thermal conductivity

ABSTRACT: According to published data, the thermal conductivity of In is 0.0576 cal/deg x cm x sec. The striking numerical agreement between this figure and that for the specific heat of In led the authors to investigate the accuracy of the published figure. Measurements were made by the longitudinal heat-flow method in the 40--150C temperature range, using grade B In of 99.997% purity. The total error of determination was 7--8%; it resulted from inaccuracy in thermocouple placement and from the error in determining the thermal emf. The determined value of heat conductivity, $K = 0.170$ plus or minus 0.015 cal/cm x sec x deg, is three times as great as the one cited. Orig. art. has: 1 figure.

TITLE: Production method for sintered heat- and corrosion-resistant
aluminum alloys. No. 6080-61

SOURCE: Hutnicke listy, no. 11, 1964, 834

TOPIC TAGS: aluminum, alloy, sintered alloy, heat resistant alloy,
corrosion resistant alloy, SAP alloy 15

ABSTRACT: A patent has been issued for a production method for sin-
tered heat- and corrosion-resistant aluminum (SAP) alloys. First, an
alloy with 8-12% silicon and a low content (up to 3%) of nickel and
titanium is melted. This alloy is atomized to a powder with 1-2%
Al₂O₃. The Al₂O₃ content is increased to 6-15% by grinding the
powder mixed with gasoline in a vibrating mill. The powder is then
processed into sintered articles.

TITLE: Cutting precision threads with high-productivity taps

PERIODICAL: Metalurgia și Construcția de Mașini, ^{by 11}no. 4, 1961, 307-311

TEXT: The article presents some problems the Combinatul Metalurgic (Metallurgical Combine) in Reșița had to deal with in the production of precision threads and describes the solutions adopted thus far. To avoid all shortcomings connected with the rolling of screw threads, pre-cutting with threading dies, provided with tangential jaws, will be adopted in future. Until then, pre-cutting will be carried out with a disk-shaped cutting tool; after pre-cutting the screws will be machined to accurate dimensions with a special die. The thread will be checked with the ring-type "go" thread gage. A special gaging device for measuring three points on the thread and for determining the diameter was designed. The pre-scribed fit is achieved by the appropriate threading of nuts. The tolerance range of the holes is divided into groups I and II, of 0.02 mm each,

Card 1/3

Cutting precision threads

while for the tap sets the following two groups have been established: 02, 03 and 04 for the adherent fit and 05, 06 and 07 for the tight fit. The nut diameter increase due to threading is 0.018 - 0.058 mm for G 7/8 in. ✓
threads, the variation depending on the quality of the material and the cooling liquid. The selection of the suitable tap for achieving the nut correspondent to the individual bolt is made by first performing a series of test threadings with sample material. To make sure that the threaded nuts are identical, the threads are calibrated with a special single-bit inverted-tapering tap. To eliminate other deficiencies such as broken threads, rugged sides, broken taps, etc., taps with optimum characteristics were devised and used. These taps have long shanks and spiral flutes towards the right and are used especially in threading blind holes. All the taps used for making various size pipe threads and metric threads up to M 16 are single-thread taps, while those for threads above M 16 are double-thread taps. The following results were obtained with the above-mentioned taps, particularly in threading blind holes: higher tap productivity; accurate sizes and geometrical shapes of thread; smoothness of thread sides; and less tap breakage. The threading operation with these

taps requires, however, the use of a special tap holder, such as the Swedish-made SPV holder, an accurate drilling machine and observance of the optimum working conditions. There are 10 figures, 1 table and 4 Soviet-bloc references.

TITLE: Sintered boral plates. CZ Pat. No. PV 2229-63, Class 80

SOURCE: Vynalezky, no. 2, 1966, 24

TOPIC TAGS: powder metallurgy, boron, powder metal sintering, boron carbide

ABSTRACT: A method of manufacturing shaped boral plates by a powder-metallurgy process is introduced. A mixture of boron carbide and aluminum powders, e.g., 30% B₄C and 70% Al, is precompacted, sintered, reheated, and compacted into plates. The compacting mold is divided into three sections by vertically movable partitions; the middle section is filled with the boron carbide-aluminum powder mixture described above and the side sections are filled with any easily machinable material such as powdered aluminum. After filling, the partitions are carefully removed without disturbing the boundaries between the two materials. After pressing, sintering, and the final compacting, the coating of the machinable material is removed by machining. [KP]

TITLE: A switch-operated pneumatic transducer for testing dimensions.

PERIODICAL: Referativnyy zhurnal, Avtomatika i radioelektronika, no. 12, 1962, 25, abstract 12-2-50 d (Automatizace, v. 5, no. 4, 1962, 107-108 (Czech.))

TEXT: The displacement of the membrane of a differential manometer is detected by a connecting rod which sequentially closes the contacts of an 8-track switching spiral. The above contacts are connected in the grid circuits of vacuum tubes, which conduct when the corresponding contact is closed. The signal relays are in the tube anode circuits, with sequential closing of contacts of the signal relay of the next tube. The anodes are connected to an a.c. supply. To avoid bouncing the relay windings are shunted by condensers. Since the switching spiral current is limited to 0.1 mA,

TITLE: Quality of Rimming Steels Produced in an Oxygen Blast Operated Converter from Pigiron with a High P content (Jakost neuklidněné oceli vyrobené v kyslíkovém konvertoru ze surového železa s vyšším obsahem fosforu)

PERIODICAL: Hutnické Listy, 1959, Nr 6, pp 493-499 (Czechoslovakia)

ABSTRACT: Numerous authors (Refs 2-7) have proved that steel manufactured in converters with pure oxygen blasts (LD method) are equal in quality to steel produced in open-hearth furnaces. The comparisons of all these authors were based predominantly on LD steel produced from open-hearth furnace pig-iron with low P and S contents, averaging about 0.12% P and 0.045% S. In order to find out to what extent the steel quality can be affected by using less favourable raw materials, the authors of this paper carried out a series of experiments. In these the mechanical, technological and metallographic properties were compared of low carbon rimming steels produced in a basic converter, in a basic open-hearth furnace and in a basic oxygen blast operated converter
