TITLE: The role of voles in tundra rabies epizootics in polar foxes  
on the Arctic coast

SOURCE: Voprosy virusologii, no. 5, 1966, 593-598

TOPIC TAGS: virus disease, animal disease, infective disease, disease  
incidence, rabies, tundra rabies, RODENT

ABSTRACT: Tundra rabies ("dikovaniya") appears as an epizootic among  
foxes throughout the Arctic coastal region. Tundra rabies  
has been found to share biological and serological proper-  
ties of common ("street") rabies, and R. M. Shen (Shen,  
R. M., V kh. Beshenstvo, M., 1958) related the tundra  
rabies virus to strains of common rabies causing atypical  
forms of the disease. The importance of voles as a reser-  
voir of both common and tundra rabies is of interest; the  
author concentrated upon characteristics of the infectious  
process in some voles, and their susceptibility to tundra  
rabies. The species studied were: *Microtus gregalis major*,

ACC NR: AP6034386

*M. middendorfii* (northern forms), *M. gregalis gregalis*, and *Lagurus lagurus* (southern forms). Standard methods of passaging and examination were used. It was concluded that: 1) voles are highly sensitive to tundra rabies in intracerebral infection; 2) voles and white mice are approximately equally sensitive to the virus; the voles *M. gregalis major* and *M. middendorfii* are less sensitive to subcutaneous infection than are steppe lemmings; 3) the disease often takes the dumb, paralytic form in all types of voles, though the stages of frenzy and drooling are observed in some animals; 4) despite the relatively high virus content of the salivary glands (1.75—2.5 lg LD<sub>50</sub>), voles could not be infected through the bites of rabid animals; 5) none of the narrow-skulled voles caught or found dead in the tundra during an epizootic among polar foxes yielded the virus; and 6) voles do not play a significant role in the epizootiology of tundra rabies.

TITLE: On the similarity problem in gas turbine control systems

PERIODICAL: Referativnyy zhurnal, otdel'nyy vypusk. 42. Silovye ustanovki, no.6, 1962, 34, abstract 426179. ("Tr.Vses. n.-i. in-ta zh.-d. transp.", 1961, no.214, 52-62).

TEXT: The application of similarity methods involves the use of unit coordinates and time values. Control systems with a large number of variables are calculated by the Stodola method; this method consists in excluding all static parameters and attributing to the rest of them time units of the first and second degree. This enables the designer, e.g. to exclude seven parameters in a fifth-order system, while the application of the  $\pi$ -theorem does not permit the exclusion of more than three parameters. Calculation examples are given and mention is made that the method

TITLE: Approximation of constant-velocity regulation in regulating systems with hydraulic servomotors

CITED SOURCE: Tr. Vses. n.-i. in-ta zh-d. transp., vy\*p. 241, 1962, 94-103

TOPIC TAGS: gas turbine regulator, hydraulic servomotor, turbine, regulator, servomotor

TRANSLATION: Gas turbine regulators with nonlinear hydraulic constant-velocity servomotors have quicker response than those with linear servomotors for the same oil pump efficiencies. Three methods of introducing a nonlinearity of the indicated type are proposed: servomotors with kinematic feedback and incomplete gate valve actuating operation, with small power feedback, and with a throttling washer at the gate valve oil inlet. The use of the first method is limited by

Card 1/2

L 19890-63

ACCESSION NR: AR3005464

the possible drop in sensitivity. It is most convenient to use throttled servomotors. Computations are carried out for the determination of servomotor time constants, oil consumption, and the choice of ratios of gate valve window and throttling washer cross sections. The use of the indicated methods of introducing nonlinearity will make possible the practically instantaneous triggering of the servomotor. Three illustrations. A. Khusid.

TITLE: Effect of the electrode geometry of coaxial symmetry on the parameters of plasma condensations

7

SOURCE: Ukrayins'kyi fizichnyi zhurnal, v. 9, no. 9, 1964, 1023-1025

TOPIC TAGS: plasma, coaxial electrode, magnetic trap, electrode geometry, coaxial symmetry

ABSTRACT: In the investigations by other authors concerning the plasma condensations in magnetic traps, the effect of the electrodes geometry on the plasma properties was not studied. In the present paper, plasma was produced between two coaxial cylindrical electrodes made from stainless steel, 250 mm long with 54 and 20 mm diameter, respectively. The discharge was produced by discharging 4 $\mu$ f capacitors with 19 kV; the discharge was of 3.2 sec. duration. The plas-

Card 1/2

L 23521-65  
ACCESSION NR: AP4046664

ma composition was studied with a mass spectrograph, the total energy of particles with a calorimeter. The energy distribution, the mass composition and the velocity of fast particles were investigated. The comparison of the results with those of other authors shows that the density and velocity of plasma condensation does not depend on the electrode material, nor on the parameters of the circuit (except for capacitance), however, the geometry affects greatly the velocity and the number of fast ions and their total energy. TITLE: On the Complex Automation of Hydro-meteorological Measurements

PERIODICAL: Meteorologiya i hidrologiya, 1960, Nr 3, pp 44 - 45 (USSR)

ABSTRACT: The Nauchno-issledovatel'skiy institut gidrometeorologicheskogo priborostroyeniya (Scientific Research Institute of Hydrometeorological Instruments) and others, developed a series of automatic devices and telemeters for measuring hydrometeorological elements. Some of them are mentioned here. At a fixed time, an automatic, radiometeorological station records atmospheric pressure, air temperature, mean wind velocity, and direction, amount of precipitation, and the presence of sunshine. These data are then transmitted by radio to the information collecting station. An automatic radio-anemometer which is set up on a large reservoir transmits information to the ships regarding wind velocity and direction over the open part of the water basin. An automatic radio precipitation gauge transmits the precipitation amount in the place concerned. Radiosondes with automatic recorder, measure meteorological elements at different altitudes. Automatic devices and telemeters record wind velocity and direction, water level, swell, flow velocity and direction, transparency of the atmosphere, and

"Vestnik Svyazi - Elektro Svyaz'" No 1 (70)

Apparently there have been quite a few cases where telegrams have been routed wrong, thus causing needless delay before their delivery to the proper addressee. The author suggests some methods by which this could be overcome, and places most of the blame on the fact that the chiefs of relay stations and brigadiers of communications points are not alert enough.

TITLE: Effect of aviation noise on some indices of protein and vitamin metabolism

SOURCE: Voyenno-meditsinskiy zhurnal, no. 7, 1966, 61-64

TOPIC TAGS: aerodynamic noise, man, vitamin, protein, metabolic disease, biologic vibration effect

ABSTRACT: A total of 44 tests were conducted on 10 healthy individuals 20-36 years of age, following 3 hours noise of 110 db intensity in a chamber. Indices were: urinary excretion of total nitrogen, urea and ammonium nitrogen and urinary oxygen; chromatographic determination in the blood of free amino acids and glutamine; excretion of the vitamins B<sub>1</sub>, B<sub>2</sub>, C, N<sub>1</sub>-methylnicotinamide and 4-pyridoxic acid. They were determined prior, during and after the effect of noise. Results showed that the nitrogen metabolism underwent no significant changes except for

Permanent protection against histamine by plant-tumor extracts. A. Kovacs, I. Szaladi, M. Szerdahelyi, and J. Kovacs (Univ. Szeged-Hung.) "Naturwissenschaften" 42, 29-1(1955).—Repeated dosage of active purified plant-tumor exts. relieves the histamine sensitivity of guinea pigs (cf. *Schweiz. med. Wochschr.*, 79, 624(1949); *C.A.* 46, 10409h). The ext. previously described was tested on 60 animals, sensitive to the extent that 0.4% histamine aerosol gave a sublethal bronchial attack in 0.5 to 1.5 min.; the dosage was 30 to 40 mg./kg. twice daily intraperitoneally; several controls were run. After 3 to 8 injections the attacks took 2-4 min. of aerosol treatment; after 15 injections 75% of the animals resisted 10-min. treatment at least; this immunity lasted for 3 months. The resistant animals showed considerable adrenal hypertrophy.

371. IMMUNOLOGICAL CONDITIONS OF TUMOURS IN PLANTS - Über Immun-verhältnisse pflanzlicher Tumoren - Szabadi L. Lungeneheanst., Ungari-sche Staatseisenbahnen, Budapest - NATURWISSENSCHAFTEN 1958, 45/7 (169)

In the experiments, rabbits were immunized against Bact. tumefaciens. After 3 weeks, the serum contained antibody titres up to 1:625. For the investigations, young tomatoes were used, divided into 4 groups. Group I: after scarification a suspension of Bact. tumefaciens was applied to the tomatoes. Group II: 0.1 ml. bacterial suspension and 0.1 ml. antiserum. Group III: normal serum and bacterial suspension. Group IV: serum from rabbits immunized with tumour extract and Bact. tumefaciens. Normal development of tumours occurred in the 1st and 3rd group, none were formed in the 2nd and 4th group; it is concluded that in plants an immunological defence mechanism exists, similar to that in animal organisms.

TITLE: Identification of small quantities of formaldehyde and formaldehyde-dimethylacetale in the presence of each other and their colorimetric determination

SOURCE: Academiae scientiarum hungaricae. Acta chimica, v. 42, no. 2, 1964, 89-106

TOPIC TAGS: formaldehyde, colorimetric analysis

Abstract: [German article] Minute quantities of formaldehyde can be identified by the color reaction of the test solution with m-phenylenediamine dichlorohydrate. Formaldehyde-dimethylacetale can be identified by oxidizing with hydrogen peroxide in an alkaline medium, followed by reaction with phenylhydrazine, resulting in a typical coloration. Means for extending the technique, described in detail, to quantitative determinations of formaldehyde and formaldehyde-dimethylacetale in small quantities and in the presence of each other were discussed. Orig. art. has 8 formulas, 2 graphs, and 3 tables.

TITLE: Kinetic analysis in organic chemistry, III. Two-component systems. Determination of o-chlorophenol in the presence of p-chlorophenol

SOURCE: Magyar Kemiai Folyoirat, v. 71, no. 11, 1965, 494-498

TOPIC TAGS: diazonium salt, chlorinated organic compound, phenol, chemical kinetics

ABSTRACT: A new method is suggested for the determination of o-chlorophenol in the presence of p-chlorophenol, based on the fact that o-chlorophenol gives a color reaction with a diazonium salt prepared from sulfanilic acid, when the test is carried out in an acid medium in the presence of sodium acetate, while p-chlorophenol gives this test only to a very slight extent. This method is applicable to the determination of o-chlorophenol if the latter is present in p-chlorophenol in a concentration of greater than 2%. In three parallel determinations the error amount to approximately 1%.
