TITLE: Preparation of individual vinyltoluenes

SOURCE: Khimiya i tekhnologiya topliv i mazel, no. 4, 1964, 3-6

TOPIC TAGS: Vinyltoluene, preparation, synthesis, vinyltoluene isomer, separation,
ethyltoluene, toluene ethylation, dehydrogenation, isomer separation, fraction-
ation, dealkylation, cracking, disproportionation

ABSTRACT: The study was made to determine if it is possible to prepare individual
vinyltoluenes or at least mixtures of the vinyltoluenes enriched in one of the
isomers. Ethyltoluenes were made by continuous vapor phase ethylation of toluene
with phosphoric acid catalyst. Since it is difficult to separate the dehydrogena-
tion products of ethyltoluene, the ethyltoluenes were separated prior to dehy-
drogenation. The ortho isomer was fractionated and the remaining mixture of meta
and para isomers was sulfonated and the ethyltoluene sulfo acids were hydrolysed.
The separated isomers were then dehydrogenated in the presence of water (water:
hydrocarbon ratio of 22:1) at 580C at a flow rate of 0.75 hrs⁻¹ on a catalyst

Card 1/2

ACCESSION NR: AP4026847

comprising 87% Fe₂O₃, 8% Cr₂O₃ and 5% K₂O. Based on ethyltoluene the yield was 94-96%; exhaust gases comprised 76-78% H₂, 19-21% CO₂ and 2-4.6% hydrocarbons. Products were fractionated at 8 mm. Hg. The purest vinyltoluene isomer prepared was the ortho, containing 5-7% para-isomer. The other two isomers were contaminated with larger amounts of mixed isomers. In comparison to dehydrogenation of ethylbenzene, dehydrogenation of ethyltoluene is accompanied by undesirable alkylation, cracking and disproportionation reactions, and the catalyst activity is rapidly lowered so it must be regenerated after each cycle. Further work is needed on the purification of the individual ethyltoluenes and on their dehydrogenation to obtain individual vinyltoluenes containing a minimum of contaminating isomers. TITLE: A method for producing plastic scintillators. Class 39, No. 168884 15

SOURCE: Byulleten' izobreteni i tovarnykh znakov, no. 5, 1965, 71-72

TOPIC TAGS: plastic, scintillator, polymerization

ABSTRACT: This Author Certificate presents a method for producing plastic scintillators by thermal polymerization in bulk of vinyl toluene in the presence of phosphorus. In order to increase the light output and the heat resistance of the scintillators, a mixture of ortho- and paravinylo toluene is used for the vinyl toluene isomers.

Title : Saluzid Therapy of Tuberculous Eye Lesions

Orig Pub : Probl. tuberkuloza, 1957, No 6, 55-60

Abstract : Saluzid (I) was used in the treatment of 59 children, aged 1 1/2-14 years, with tuberculous eye lesions. I was administered in the form of a 5 and 10 percent solution (with the addition of a 0.05 percent citrate buffer). Observations over a one year period demonstrated that I in the form of an ointment or drops had a favorable therapeutic effect in scrofulous diseases of the cornea, but did not prevent recurrences. In severe diseases of the cornea, in sclerokeratitis and uveitis of tuberculous origin, good therapeutic results were observed with I administrated internally (0.3-0.5 g per dose; 0.9-2 g in 24 hours.)

1162. THE USE OF PHTHIVAZID IN PEDIATRIC OPHTHALMOLOGICAL PRACTICE (Russian text) - Tokareva B. A. - SOV. MED. 1957, 9 (109-113)
A 5% phthivazid (INH analogue) ointment and phthivazid internally were used for 79 patients with lesions of 84 eyes (deep keratitis, scrofulous keratitis, keratoscleritis, uveitis, and chorioretinitis); the ages of the patients ranged from 1.5 to 13 years. Patients with phlyctenular keratitis received phthivazid ointment 3 times per day and 5% calcium chloride for 12 days. In severe cases of scrofulous keratitis, 0.25% calcium chloride intramuscularly and phthivazid powder internally were used concurrently. Patients with deep keratitis received the phthivazid ointment, phthivazid internally, and streptomycin. Excellent results were obtained among the patients with keratoscleritis; in cases of tuberculous uveitis the treatment was also very effective; an excellent effect was observed in cases of listerellosis. In the course of 3-4 days the blepharospasms were diminished, and new phlyctenae did not appear; on the 5th-6th day epithelialization set in. The phthivazid ointment was particularly effective in cases of phlyctenular and ulcerative keratitis. It also exerted a favourable action in cases of uveitis and chorioretinitis. (S)

571. SUBCONJUNCTIVAL INJURIES OF THE SCLERA (Russian text) - Kras-
nov M. L., Tokareva B. A., and Shartz S. E. - VESTN.OFTAL.
1957, 4 (23-27) Tables

This is a report on 23 patients who suffered from a subconjunctival tear of the sclera; the age ranged from 8 to 73. The site of the tear was in the region of the ciliary body in 15 eyes, in the region of the angle of the chamber in 5, and behind the equator in 3 eyes. The authors emphasize the point that in each case, suspicious of a scleral tear, surgical interference should be undertaken at once; the incision of the conjunctiva should be made beyond the suspected scleral tear, the perforated sclera and conjunctiva should be sewed up separately. Their conclusions are as follows: (1) The subconjunctival scleral tears are localized mostly in the anterior segment of the eye ball. (2) As soon as the tear is localized, careful surgery should be done with removal of the prolapsed (iris, ciliary body, lens) tissues, careful suturing of the scleral wound. (3) This procedure saved all the eyes (some severely injured) with retention of useful vision in most of the eyes.

831. THE USE OF SYNTHOMYCIN FOR SCROFULOUS AND HERPETIC KERATITIS IN PEDIATRIC PRACTICE (Russian text) - Tokareva B. A. and Geimov E. K. - ZH. OFTALM. 1956, 5 (290-292)

Observations on 62 children aged 1 to 13 yr. are reported; 44 had severe scrofulous keratoconjunctivitis and keratitis, and 18 had herpetic keratitis. Synthomycin (chloramphenicol) powder was placed into the conjunctival sac after instillation of 1% atropine or 1% solution of pilocarpine, 3 times a day. Beneficial effect of synthomycin was noted in cases of scrofulous and herpetic keratitis. Local application is effective in early cases. The authors consider that in long-standing and relapsing cases combined (i.e. local and systemic) therapy is indicated. Synthomycin is suitable for combined therapy in cases of scrofulous and herpetic keratitis.

TITLE:

A Radiometric Method for Determining Uranium, Thorium, and
Radium in Ores (Primeneniye radiometricheskogo metoda dlya
opredeleniya urana, toriya i radiya v rudakh)

PERIODICAL:

Zavodskaya Laboratoriya, 1958, Vol. 24, Nr. 8, pp. 959-963
(USSR)

ABSTRACT:

A practical method for analysing uranium and thorium ores by altering the radioactive equilibrium is especially complicated, since the application of β and γ measurements is insufficient. A method suggested by G.R. Gol'bek et al. (Ref 4) was tested by Ye.I. Zheleznova. This method is based upon a spectroscopic measurement of the γ -radiation. In the γ -ray spectrum of the elements of the thorium series there is an intense line of 2,62 MeV, while in the uranium series the maximum energy of the intense line does not exceed 1,8 MeV. Two measurements were used in determining the thorium and radium content of ores. The intensity of the total γ -radiation was determined as well as the intensity of that part of the spectrum where the thorium series predominates. The method of calculation is described. Two types of radiometers were used

Card 1/2

A Radiometric Method for Determining Uranium,
Thorium, and Radium in Ores

SOV/32-24-8-18/43

in these investigations. The radiometer-analyser no. 1 is a triple-canal apparatus with a gas-filled counter, and was constructed by G.R. Gol'bek. The LAU-52M instrument (factory mark IAS⁺), is a scintillation apparatus and was constructed by S.Ia. Yakubovich. Both instruments are described, and a diagram and a photograph are given. It was observed that the best analytical results of the determination of the three elements U, Th and Ra were obtained with a Th/U ratio (i.e., coefficient of the radioactive equilibrium) of 0,2 to 5,0. There are 2 figures, 1 table, and 5 references, 2 of which are Soviet.

AUTHOR: Tokareva, D. V.

TITLE: Trial photoneutron determination of beryllium on multicounter equipment

PERIODICAL: Referativnyy zhurnal, Geofizika, no. 9, 1962, 45, abstract 9A294 (Byull. nauchno-tekhn. inform. M-vo geol. i okhrany nedr SSSR, no. 6 (34), 1961, 58-62)

TEXT: Data on the reproducibility and convergence of the results of determining beryllium by the photoneutron method are given together with some results of investigating the choice of the optimum number of counters, the retardation conditions, and the geometry of the measurements. 5 CHMO-5 (SNMO-5) type counters and a

Sb^{124} source with an activity of 50 millicuries were used in the apparatus created. The neutron counting rate amounted to 1.2 pulses/min.mg.Be0.10 millicuries, the equipment's natural background being 5-7 pulses/min. /Abstracter's note: Complete translation._/

TITLE: The effect of heat stabilizers on the structure of capron fiber.

SOURCE: Khimicheskiye volokna, no. 2, 1964, 35-41

TOPIC TAGS: Capron fiber, structure, heat stabilizer, mechanical property, capron cord, morphology, heat treatment, elongation, polymer destruction, thermooxidative destruction, oxidation inhibitor, electron microscope, polarized microscope, fiber forming, fiber drawing, stabilizer polyamide bond, stabilization mechanism

ABSTRACT: The morphological character of capron fiber and the mechanical properties of capron cord stabilized with N, N'-di-beta-naphthy 1-p-phenylenediamine (DNFDA) were investigated. Studies showed that heat treatment at 20-140C had little effect on the strength of the cord (34.5/4 x 2 and 10.7/1 x 2). On prolonged heating at elevated temperatures the strength of the stabilized fiber did not change significantly while the unstabilized fiber strength was reduced drastically. Heating under nonoxidizing conditions did not produce significant

Cord 1/3

ACCESSION NR: AP4027715

differences in the properties of the stabilized and unstabilized materials. Thus the deterioration of properties in the unstabilized fiber is attributed to thermo-oxidative destruction of the polymer. The oxidation inhibition by DNFDA is further illustrated by the higher dynamic properties of stabilized fibers. The structure of the fibers was examined with polarized and electron microscopes; photographs are included. The unstabilized capron fiber has a coarse macrostructure within the fiber which is absent at the surface of the fiber. By adding a small amount of stabilizer (0.5%) to the monomer melt, a fiber is obtained which has fine-dimensioned anisodiametric supermolecular macroformations and coarse oriented particles in the core and spherulite type structures in the surface. Based on these observations, it is proposed that self-reinforcement is clearly manifested and its influence on the properties of the stabilized capron fiber is shown. The physico-mechanical properties of the unstabilized capron cord extracted with acetone were reduced with continued heating (strength reduced by 2/3, elongation by 1/2) at 150C for 150 hours. The reduction in strength of the extracted and of unextracted stabilized capron cord was only about 1/4 while there was actually a slight improvement in the elongation. This led to the assumption that there is a strong bond between the stabilized molecules and the polyamide which affects

Cord 2/3

ACCESSION NR: AP4027715

the formation and growth of the supermolecular structure upon forming and drawing the fiber. A complex mechanism is proposed for the stabilization of the physical-mechanical properties at high temperatures and dynamic deformation: this mechanism is based on the association of the inhibition of thermochemical destruction of the polymer and on the stabilization of the fine-dimensioned supermolecular structure in the process of breaking down the fibrous materials. "Electron-microscopic data were obtained jointly with K. Kh. Razikov" "Authors express sincere appreciation to A. V. Orlov and K. Kj. Razikov for help in obtaining experimental data." TOPIC TAGS: ^{VINYL} polymer, polyvinyl alcohol, heat resistance, heat resistant polymer

ABSTRACT: An Author Certificate has been issued for a method of making vinyl polymers, such as polyvinyl alcohol and its byproducts, heat resistant by use of phosphorus containing compounds. To increase the number of heat stabilizers and to improve the properties of polyvinyl alcohol and its byproducts, water-insoluble disphosphites of the following formula are used as phosphorus-containing compounds; 1

TITLE: A method for thermal stabilization of polyamides. Class 39, No. 172486

SOURCE: Byulleten' izobretений i tovarnykh znakov, no. 13, 1965, 69

TOPIC TAGS: polyamide, thermal stability, stabilizer, triazine

ABSTRACT: This Author Certificate presents a method for thermal stabilization of polyamides by adding stabilizers. To increase the assortment of materials, the derivatives of triazine, such as N-paraoxyphenyl-2, 4-diaminotriazine-1,3,5, or 2-amino-4-para-anizidinotriazine-1,3,5 are used as stabilizers. The stabilizer may be added in the amount of 0.5% by weight.
