Pharmacological and chemical investigation of barberry
 (Berberis vulgaris). Z. Supek and D. Tomić. *Liječnički
 Vjesnik* 68, No. 1-2, 1-10 (reprint of *Liječnički
 Vjesnik* 68, 10-18) (1946).--The purpose of the research
 was to examine the chem. and pharmacol. properties of the
 domestic drug of *Berberis vulgaris* and to compare it with
 that of the foreign drug of *Hydrastis canadensis* (golden-
 seal). Chemically it was found that the active principle
 of barberry--berberine--was contained in the rootbark
 (0.15%) and to a lesser degree in the wood of the root
 (0.4%). The amt. of berberine present was detd. gravi-
 metrically by means of picrolonic acid. No traces of
 tannin could be revealed. For pharmacol. studies, a
 5% decoction of *Cort. rad. berberidis* with a sp. gravity
 1.0071 contg. 0.18% berberine was used. Both drugs act
 on the isolated guinea pig uterus qualitatively in the same
 way. Quantitatively barberry is more effective due to
 its higher content of berberine. Since the drug hydrastis
 acts on the isolated uterus also after removal of hydrastine,
 S. and T. conclude that berberine is one of the most active
 principles of the drug hydrastis in its action on the isolated
 guinea pig uterus. E. J. Frelih

PROCEDURES AND PROPERTIES INDEX

Compounds of nicotine with aromatic acids. M. Debellé and D. Tomic. *Arb. Kemijska*, [1948, 17, 30-37].—The compounds were prepared by dissolving the acids in hot H₂O, EtOAc, or abs. EtOH and adding to the solution an equivalent measured amount of nicotine; by cooling the mixture or addition of abs. Et₂O crystals of the following were obtained: nicotine *m-nitrobenzoate*, m.p. 118-116-57, *p-nitrobenzoate*, m.p. 125-125, 3:5-dinitrobenzoate, m.p. 134-136, and 2-nitrobenzoate, m.p. 164-166; these contain 1 mol. of nicotine to 2 mol. of acid. The following compounds contain 1 mol. of nicotine to 1 mol. of acid: nicotine *5-nitroisobutyrate*, m.p. 117-118, *malonate*, m.p. 110-117, *isophthalate*, m.p. 212-212-6* (decomp.), *terephthalate*, m.p. 170-171* (decomp.), and *phthalate*, m.p. 159-157*. [A] for the salts are given. S. S. M.

Research in drugs of the genus *Potentilla*. Dragutin Tomić (Inst. farmakol. i toksikol., Zagreb, Jugoslavija) *Inficirad. Indanjs Inst. Farmakol. i Toksikol. Zagreba*

(Batraord. Ibd. Inst. Pharmacol. i Toksikol. Zagreb) 4, 7-32(1948).—A no. of plants of the genus *Potentilla* were examd. for their chem., pharmacol. and clinical properties. Only two drugs, the rhizomes of tormentil (*P. erecta*) and roots of creeping cinquefoil (*P. reptans*), were found to be valuable as antidiuretic and astringent agents. Both drugs contain a tannin similar to that of chaitany, the quantity of which is even greater than in the foreign plant cited. Chemically, samples of rhizomes of tormentil contain 14.3-21.1%, mainly catechol tannin. Herb of tormentil contains 9.0% of pyrogallol tannin. The analysis of *P. reptans* indicated the presence of catechol tannin associated with small quantities of pyrogallol tannin in the subterranean parts, and of pyrogallol tannin alone in the aerial parts of the plant (leaf 10.3%, stem 14.8%, blossom 30.8%). A 0.5% aq. soln. of tannins catd. from the roots is l-rotatory. *P. reptans* contains fructose and aldose. Furthermore, *P. reptans* contains in all its organs ellagic acid, flavone, lard oil, sugar, starch, mucilage, gum, enzymes (peroxidase), citric, oxalic, tartaric, and volatile acids. It does not contain alkaloids or saponins. R. I. Prelich

Title : Scolytids in the Forest Reservation on Mount Golija in
1953

Orig Pub : Shumarstva, 1957, 10, No 3-4, 207-210.

Abstract : A reservation on Mount Golija (Yugoslavia) occupies 50 ha.;
fir, beech and spruce grow there. The average age of the
plantations is 200 years; diameter of the trees, 150 cm.;
height, 40 m. As a result of a hurricane in the autumn of
1952, there were many wind-felled trees. In June 1953, from
an investigation of the fallen trunks, there were found six
species of scolytids on the spruce, two on the fir, and two
on the beech. The most damaged were spruces. Some of the

AUTHOR: Tomić, Dragiša, Engineer (Beograd)

TITLE: Tungsten in the World and Yugoslavia (Volfram u svetu i kod nas). I.

PERIODICAL: Tehnika, 1959, Nr 3, pp 406-412 (YUG)

ABSTRACT: The article was written by the author in conjunction with Engineers S. Talić, A. Gogol, D. Borbetij, K. Ivanović and D. Totić as a paper presented at the Savetovanje inženjera i tehničara rudarske i metalurške struke (Conference of Mining and Metallurgical Engineers and Technicians) held in Skopje in May 1958. It is the first in a series of articles, covering the history, discovery, occurrence, mining and processing of tungsten throughout the world. Here, particular attention is paid to the technological working of tungsten and its concentration. Statistics on the world consumption of tungsten are also given. There is 1 graph and 1 table

"The Mouth-to-mouth Resuscitation of Newborn Babies."

Zagreb, Liječnicki Vjesnik, Vol 85, No 4, April 1963, pp
431-437.

Abstract: [Author's English summary modified] The mortality rate among newborn infants varies according to latest data between 2 and 3 percent, caused by respiratory failure in more than half of the cases. The author discusses the causes of asphyxia and the methods of treatment, including the mouth-to-mouth method of resuscitation, which the author prefers on the basis of his experience with the resuscitation of 54 infants born in his department. The author recommends this procedure in cases of moderate and severe asphyxia whenever the use of endotracheal intubation is impossible. Western and Yugoslav references.

"Patterns of Circulation of Eosinophil Cells in the Peripheral Blood in
Children"

Belgrade, Srpski Arhiv za Celokupno Lekarstvo, Vol 94, No 4, Apr 66;
pp 323-334

Abstract: [French summary modified] Data on eosinophilia in 553 children
out of 8970 hospitalized in 1957 through 1964 in whom eosinophilia was
over 10%: ratios by year, diagnosis, treatment. Eosinophilia increases
with age. Causes are reviewed and discussed. 10 tables, 4 Yugoslav, 9
Western, 5 Soviet references. Manuscript received 1 Feb 66.

TITLE: Forensic evaluation of death due to ectopic pregnancy

SOURCE: Medicinski glasnik, no. 4-5, 1965, 97-99

TOPIC TAGS: biologic reproduction, medicine

ABSTRACT: Description and discussion of 4 instructive cases of fatal rupture of ectopic pregnancy in young women, in all of whom the condition was initially or repeatedly misdiagnosed. Greater awareness of the possibility of ruptured ectopic pregnancy in abdominal conditions in young women is urged inasmuch as the condition is relatively frequent and it usually produces a fairly typical syndrome. TITLE: Simulation of pregnancy as subject of forensic expertise

SOURCE: Medicinski glasnik, no. 4-5, 1965, 108-109

TOPIC TAGS: biologic reproduction, medicine

ABSTRACT: Case report of a woman aged 25 who had had gynecologic surgery which rendered her sterile without her knowledge; her husband threatened divorce as he wished to have children; eventually she pretended that she was pregnant and fooled everybody, passing as her own an infant boy which she bought from a gypsy girl; this was discovered after a family quarrel and a forensic medical examination uncovered the past medical history. "The Compression and Rupture of the Umbilical Cord During Childbirth"

Belgrade, Medicinski Glasnik, Vol 17, No 5, May 1963, pp 190-192.

Abstract: [Authors' Serbocroatian summary modified] The most frequent causes of trouble with the umbilical cord in childbirth are sideways or crosswise positions in the womb and pronounced cephalopelvic disproportion. Childbirth must be completed as soon as possible if the umbilical cord is compressed or broken, by operation if necessary, unless the infant is already dead. The authors describe their experiences with 30 such cases out of 12,524 births at their clinic between 1957 and the end of May 1962.
