Title : Presowing Treatment of Seeds of Perennial Lupine.

Orig Pub: Seleksiya i semenovodstvo, 1957, No 5, 56-59.

Abstract: With the purpose of studying the effect of scarification on the germination of seeds of perennial lupine during winter sowing, small plot field experiments were conducted in 1952-1955 in the Selivanov Rayon of Vladimirskaia Oblast. It was established that winter sowing of perennial lupine must be carried out at the start of winter (in the second half of November) after the thaws, in order to exclude the possi-

"Use of a New Domestic Major Tranquillizer (Frenolone) in Internal Diseases"

Budapest, Orvosi Hetilap, Vol 103, No 49, 9 Dec 62; pp 2321-2324.

Abstract: [Author's Hungarian summary] Author has employed the new major tranquillizer Frenolone in 134 cases of various internal diseases over the last eighteen months. Good results were observed in ulcers, in the different forms of vegetative dystonia and in the sedation of patients with coronary thrombosis. The good results obtained in ulcer patients are seen as being partly due to the role of Frenolone potentiating the effect of parasympatholytic drugs. Parkinsonoid symptoms were noted in three cases; allergic reaction was not encountered. [11 references: 6 Hungarian, 5 Western].

TITLE: Optimum method of objective classification of pattern recognition problems

SOURCE: Avtomatika i telemekhanika, v. 26, no. 11, 1965, 2062-2063

TOPIC TAGS: pattern recognition, recognition process, class theory, statistic distribution, data sampling

ABSTRACT: In the past, pattern recognition methods required the advance knowledge of the class to which the given pattern belonged (at least during the learning process). The present note investigates a new method based on the theory of statistical solutions according to the general sampling approach corresponding to the set of possible situations. The moment method is utilized for the estimate of unknown parameters in the case of more general multi-dimensional normal distributions belonging to two recognizable classes. The covariant matrix established for the case of such a multidimensional normal distribution also remains valid for an arbitrary symmetric distribution. Orig. art. has: 5 formulas.

Determination of residual water-and-oil-saturation in
oil-containing sands under stratum conditions.

Periodical : Neft. Khoz., v. 32, #6, 37-42, Ju 1954

Abstract : Knowledge of the amount of residual water in the oil
collector has an important significance for their
rational exploitation. The author discusses conventional
experimental determination of the residual water by the
method of capillary substitution under atmospheric condi-
tions and proposes the experimental testing of this
method under high pressure. 2 drawings, four tables and
two charts.

REMARK: This book is intended for chemists, chemical engineers, and technicians specializing in the chemistry of petroleum. The book is a collection of papers presented at the Third Scientific Session on the Chemistry of Organic Sulfur- and Nitrogen Compounds Contained in Petroleum and Petroleum Products. The scientific session was held in Ufa, U.S.S.R., June 3-8, 1971. The book consists of six sections: 1) Synthesis, characterization, and analysis of sulfur compounds contained in petroleum and petroleum products; 2) Separation and purification of sulfur compounds by chemical and physical methods; 3) Properties of and the formation of sulfur-containing products; 4) Properties of and the formation of sulfur-containing products; 5) Properties of and the formation of sulfur-containing products; 6) Physicochemical properties of organic sulfur compounds. The personal files mentioned. There are 115 references of which 119 are Soviet, 118 English, 5 French, 12 German, and 1 Czech.

TITLE: Sulfur organic compounds in straight-run distilled fuels

SOURCE: AN SSSR. Bashkirskiy filial. Khimiya seraorganicheskikh soyedineniy,
soderzhashchikhsya v neft'yakh i nefteproduktakh, v. 6, 1964, 26-34

TOPIC TAGS: chromatographic fuel analysis, sulfur organic compound, straight run fuel,
cyclic sulfide, 2-methylthiacyclohexane, 3-methylthiacyclohexane, 4-methylthiacyclohexane,
2-methyl-5-ethyl thiophane, 2-propyl thiophane, 2.5-diethyl thiophane, 2-methyl-5-pro-
pylthiophane, distilled fraction sulfide content, sulfide identification process, petroleum
refining, chromatography

ABSTRACT: Continuing previously published reports on the sulfides in fuels straight-run
distilled (120-240C, 0.15% total S, 0.058% sulfide S) from Tuymazinskaya and Bavlinskaya
crudes, the authors completed a chromatographic analysis over silica gel (0.25-0.5 mm)
of a filtrate (6324 g, 3.7% S) distilled at atmospheric pressure into 5° fractions (column

Card 1/2

ACCESSION NR: AT4040449

distilling capacity equal to 36 theoretical plates). Fractions at 140-160C were hydrogenated over Raney nickel and sulfides isolated from fractions at 160-190C were purified with picric acid to remove aromatic hydrocarbons. Using described identification procedures, the authors found 13 cyclic sulfides, basically $C_8H_{16}S$ with an admixture of $C_7H_{14}S$ and $C_6H_{12}S$, and identified 2-methylthiacyclohexane, 3-methylthiacyclohexane, 4-methylthiacyclohexane, 2-methyl-5-ethyl thiophane, 2-propyl thiophane, 2,5-diethyl thiophane and 2-methyl-5-propylthiophane. Orig. art. has: 11 graphs and 3 tables.

TITLE: Vertical displacement of pins and tripods

SOURCE: AN EstSSR. Institut fiziki i astronomii. Sovremennyye dvizheniya zemnoy kory. Recent crustal movements, no. 2, 1965, 322-328

TOPIC TAGS: geodetic leveling, repeated leveling, leveling equipment, instrument stability, geodetic instrument

ABSTRACT: In 1963-1964 a series of experimental investigations were made in the Estonian SSR by the Institute of Physics and Astronomy (AS EstSSR) on the vertical displacement of turning pins and tripods. Pins of different sizes and shapes were used. Investigations showed that the errors caused by vertical displacements are small (averaging 0.005 mm at each station) and may be a source of systematic errors only on very firm hard ground. Title : Serum Aldolase - Test for Differential Diagnosis of Liver
Diseases.

Orig Pub : Viata med., 1957, 4, No 5, 82-88

Abstract : With the determination in 75 patients of virus hepatitis and in 25 patients of other diseases of the liver, an increase was established of 7-35, and sometimes of 98%, in the content of aldolase (an enzyme catalyst in the metabolism of carbohydrates processed by the liver) in serum, in the course of the second and third week of illness with virus hepatitis. Determination of aldolase is proposed as a test for the differential diagnosis of epidemic hepatitis.

TITLE: Changes of some serum enzymes in anicteric epidemic hepatitis in children

SOURCE: Microbiologia, parazitologia, epidemiologia, v. 10, no. 1, 1965, 77-82

TOPIC TAGS: enzyme, serum, biochemistry, hepatitis, epidemiology, nervous system disease, infant disease

ABSTRACT: The authors report on a dynamic, serologic and biochemical study of a group of 66 children with neuropsychic diseases where epidemic hepatitis cases occurred. They found that one third of the patients displayed subclinical anicteric forms. The dynamic enzyme survey was useful in detecting new hepatitis forms and in following up newly detected cases. Orig. art. has: 1 figure and 3 tables. [JPRS]

Effect of pore volume of ferromagnetic sintered forms on

the magnetic properties. K. Tucker (Tech. Hochschule, Grns, Austria). *Masch. 63, 1987 701(1961)*. Carbonyl- and electrolytic-Fe powders were placed in a hydraulic press with pressures of 0.5-8 tons/sq. cm. and 1-6 tons/sq. cm., resp., applied to form bars 4 X 4 X 60 mm. Test specimens were brought to sintering temps. of 500-1300° for 16 hrs. in a H atm. The carbonyl Fe used had a grain size of 2.5 μ. and the electrolytic Fe approx. 0.0 μ. The effect of the pore size on elec. cond., permeability, linear magnetization factor, and residual magnetization was detd. for the various pore sizes that were formed. Gilbert B. Klein

TITLE: The Relations Between the Velocities of Simultaneous
Vertical Motions of the Earth's Crust, the Gravitational
Fields, and the Elements of the Earth's Structure 12

PERIODICAL: Doklady Akademii nauk SSSR, 1960, Vol. 132, No. 4, pp. 810-813

TEXT: In the introduction, the direct and indirect correlation between the time-dependent changes of the gravitational field and the vertical motion of the Earth's crust are discussed, and two symbolic relations for this purpose are given. In the geophysical laboratory of the Kompleksnaya yuzhnaya geologicheskaya ekspeditsiya Akademii nauk SSSR (Geological Expedition to the South for Comprehensive Studies of the Academy of Sciences, USSR), which was under the supervision of A. T. Donabedov, systematic investigations were carried out in 1957 of the indirect relations between the gravitational fields and the vertical motions of the Earth's crust. At the same time, the characteristic

S/020/60/132/04/21/064
B014/B007

features of the structural elements of the Earth's crust were investigated. From data, which were determined in the territory of the Caspian Sea, relations between the gravitational anomalies and the vertical motions were found to exist. Three main types of relations, viz. a so-called direct, an inverse, and an indefinite relation, were discussed. From the diagrams of these measurements (Figs. 2-3) for the profiles Rostov - Sal'sk (Fig. 2) and Stalingrad - Krasnodar (Fig. 3) carried out in consideration of other profiles, several conclusions are drawn and discussed in detail. There are 3 figures and 1 Soviet reference. ✓/B
