Enriching yeast with vitamin D by irradiation with ultra-violet rays. V. YADIMOV, A. VOZNAVA AND V. SEMARENKO. *Elektrifikatsiya Sel'skogo Khozyaystva* (Electrification of Agriculture) 2, No. 8, 20-28 (1932).--Yeast subjected to ultra-violet rays was fed to chicks for vitamin D and the general behavior of the chicks with respect to growth, disease resistance and mortality was recorded. Another test was conducted on a group of chicks subjected to ultra-violet irradiation. It was found that the yeast and direct irradiation were more effective than cod-liver oil. The treated chicks did not suffer from rickets and anatomical investigations showed the advantages of the ultra-violet rays. J. S. Jovan

METALLURGICAL LITERATURE CLASSIFICATION

VADIMOV, V.M.

Some biological properties of "activated" water. Y. M. Vadimov, *Prirada* 26, No. 4, 13 (1935); *Chem. Zvest.* 1936, 1, 3712. By "activated" water is meant water which has been exposed to the action of ultraviolet radiation under certain definite conditions, and which differs from ordinary water in phys. and chem. properties. Natural waters can be differentiated from one another by their "degrees of activation." "Activated" water exerts a growth-stimulating action on young poplars. When "activated" water is used as drinking water for chickens no influence or only very slight influence is exerted on the deposition of Ca. However, when the feed is moistened with "activated" water an increased deposition of Ca in the bones of the chicken is observed; this effect is especially marked when the food is moistened 24 hrs. before feeding. Long-continued use of such water results in retardation of growth. M. G. Mironov

Spectrophotometric determination in potatoes of the methyl ether of naphthylacetic acid which stops the growth of tubers in the process of prolonged keeping (conservation). Voprosy Pitaniya 12, No.2, 74-9 '53. (MLRA 6:4)  
(CA 47 no.20:10795 '53)

The use of methyl ester of alpha-naphthylacetic acid (M-1) to inhibit the sprouting of potatoes kept in storage appears promising from the economic standpoint. However, it became necessary to establish that M-1 is harmless. In order to carry out the toxol. investigation in question, a spectrophotometric method for the detn of M-1 was developed.

FOREWORD: This book is intended for physicians, scientists, and engineers as well as for professors and students at vuzses where radiobiology and radiation medicine are taught.

CONTENTS: This is Volume 5 of a 6-volume set of reports delivered by Soviet scientists at the Second International Conference on the Peaceful Uses of Atomic Energy, held on September 1-13, 1956, in Geneva. Volume 5 contains 32 reports edited by Candidates of Medical Sciences S.Y. Levinskiy and V.Y. Sobov. The reports cover problems of the biological effects of ionizing radiation, future consequences of radiation in small doses, genetic effects of radiation, treatment of radiation sickness, uses of radioactive isotopes in medical and biological research, uses of atomic energy for diagnostic and therapeutic purposes, soil absorption of uranium fission products, their intake by plants, and their storage in plants and foodstuffs. References accompany each report.

AUTHOR:

Vadimov, V. K.

SOV/48-23-10-34/39

TITLE:

An Attempt at Employing Molecule Spectral Analysis in Bacteriology and Immunology

PERIODICAL:

Izvestiya Akademii nauk SSSR. Seriya fizicheskaya, 1959, Vol 23, Nr 10, pp 1260 - 1262 (USSR)

ABSTRACT:

In connection with an investigation of the possibilities of using  $\gamma$ -rays for the "cold" sterilization of bacterial preparations the investigation of the physico-chemical particularities of an antitoxic preparation against diphtheria irradiated with large  $\gamma$ -doses was of interest. A first measurement of two diphtheria antitoxin preparations, one of which had been irradiated, showed that the absorption curves differed only little from one another (Fig 1). Therefore, more exact physico-chemical investigations were carried out: Electrophoresis on paper followed by the spectroscopic investigations of the extracts, as well as an investigation of luminescence (irradiation with 1,500,000 r, applying on to filter paper, uv-irradiation); it was found that the luminescence of irradiated preparations was higher than that of not irradiated ones. The five diagrams in figure 1 show the absorption curves of indivi-

Card 1/2

An Attempt at Employing Molecule Spectral Analysis      SCV/48-23-10-34/39  
in Bacteriology and Immunology

dual zones of a preparation before and after  $\gamma$ -irradiation. The curves of irradiated and non irradiated preparations were found to differ somewhat, the maxima at 238 m $\mu$  remain unchanged. Finally, the author discusses the investigation of the absorption spectra of bleached dye after the dyeing of bacteria in suspension. The degree of bleaching of bacteria dyed with acridine orange was determined. The four diagrams in figure 2 show the absorption spectra of the dye-residues after the bacteria had been dyed in suspension. From the spectral characteristic of the remainders of the dye-solution it is possible to determine the percentage of living and dead bacteria in the suspension. There are 2 figures and 3 references, 2 of which are Soviet.

AUTHOR: Vadivasov, D.G., Engineer

TITLE: An Electrometallization Head

PERIODICAL: Mashinostroitel', 1959, Nr 6, p 32 (USSR)

ABSTRACT: A new metallization head designed by N.A. Glukhovskoy, a mechanic of the electrometallization laboratory of the Saratovskiy institut mekhanizatsii sel'skogo khozyaystva imeni M.I. Kalinina (Saratov Institute for the Mechanization of Farming (imeni M.I. Kalinin), is described. It works on the conventional principle of such devices and consists of a textolite panel, two aluminum cheeks and exchangeable nozzle. The nozzle is made of brass wire of 1 to 2 mm diameter, which is wound so as to form a small tube. It is used for restoring worn automobile and tractor crankshafts. In operation on a crankshaft it is held not as the conventional heads, but on edge, at a 90° angle. Its width is 25 mm and it can be of any re-

Card 1/2

SCV/117-59-6-18/33

An Electrometallization Head

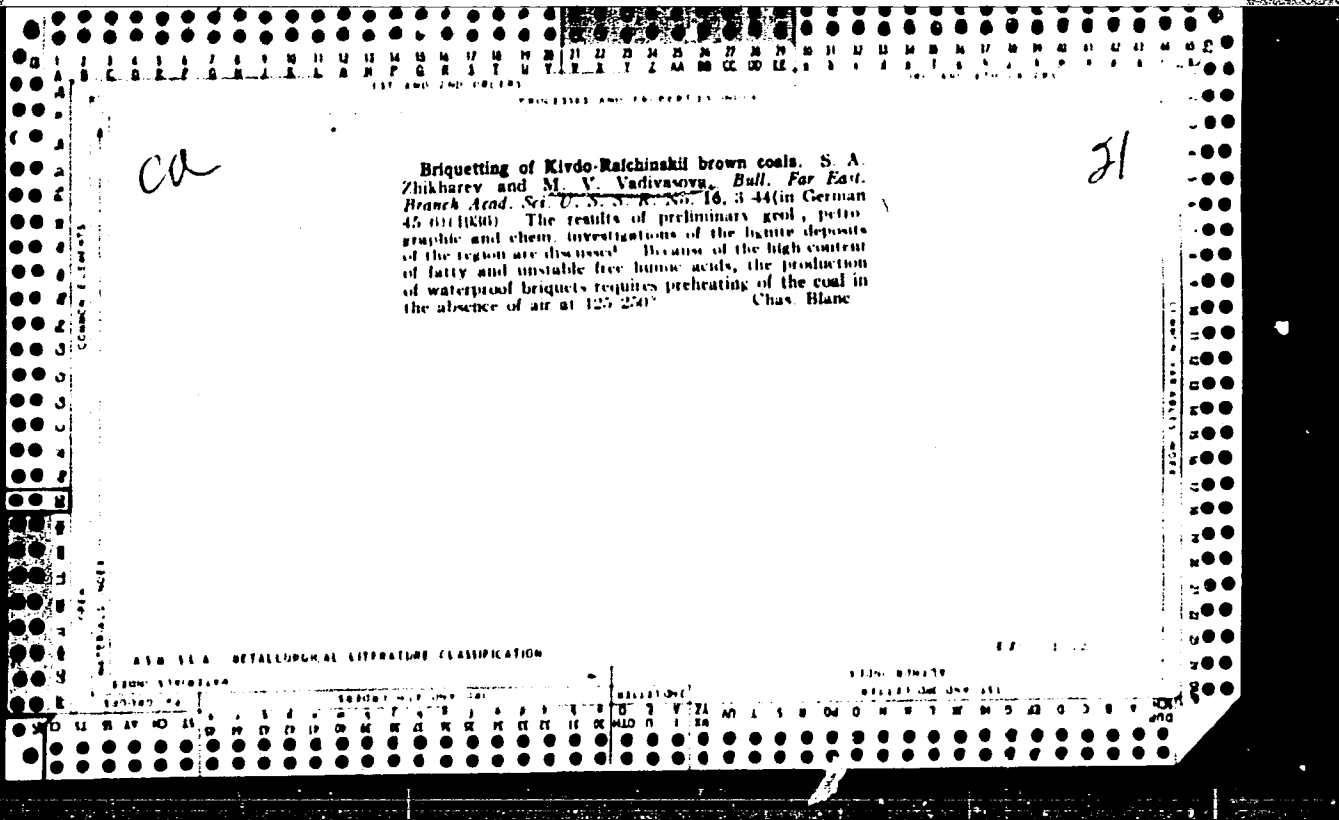

quired length; it reduces losses of metal, which are great with other metallization heads. The balances need not be removed from the crankshaft. The wire nozzles serve 6 months, as compared to the 50 hours service of the hard alloy nozzles used in "LK-6" metallizers. The head can be made in any mechanical workshop at a cost of 100 rubles. There is 1 photograph.

TITLE: On the Methodology of Making Observations at Bioclimatic  
Resort Stations (K metodike nablyudeniy na kurortnykh  
bioklimaticheskikh stantsiyakh)

PERIODICAL: Sbornik: Vopros izucheniya kurort. resursov SSSR. Moscow,  
Medgiz, 1955, pp. 342-366.

ABSTRACT: Instructions are given on the selection of meteorological  
areas, observation periods, methods of making observations,  
basic rules in recording observations, the compilation of  
TM-1 tables, and on meteorological observations in air  
solariums, on beaches, and at bioclimatic stations. Tables  
are presented for calculating radiation in body exposure  
to the sun, the duration in minutes of a doze of direct  
solar radiation on a horizontal surface at 9, 12 and 15  
hours for different latitudes, determining equivalently  
effective temperatures with the use of dry and sun thermo-  
meters in still air, and in air moving at the rate of 1;  
1.5; 2.5; 3.5 m/sec etc.

Title : Soils of the Main Botanical Garden, Academy of Sciences, USSR

Orig Pub: Tr. Pochv. in-ta AN SSSR, 1955, 46, 78-135.

Abstract: The results of soil investigations are given by the author for the Ostankin grove territory (1945-1947). The territory described is occupied by a broadleaf coniferous forest on a moraine plateau, slanting slopes and sandy terraces. Groves, birch forests and pine cultivations predominate. The following soils are found: soddy-podzol soils, podzol-swampy soils (turfy-podzol-gley, sod-podzol-gley, sod-podzol-gleyish), alluvial-meadow (river bottom land)soils. The soil distribution is shown on a soil map on a scale 1:2,000. The analysis of 19 main sections of these soils is given (the pH, humus content, N, absorbed

bases, total composition, mechanical, microaggregate and other analyses). The soddy-podzol argillaceous soils are described in greater detail; additional mineralogical, x-ray and thermal analyses are given for these soils. As a result of these investigations, the following was shown: 1. The soil forming types (boulder clay) within the garden limits bear a striking similarity to the moraine deposits of the Leningrad, Novgorod and Yaroslavl oblasts, which permitted the author to compare it with the soils of these oblasts; 2. The comparative similarity of the mechanical composition in deposits of the upper layer is conditioned by soil forming processes; 3. In the sod-podzol soils, a relative accumulation of humus upper layers is noted (by comparison with the podzol soils) of organic matter, absorbed bases, and a silty fraction. This accumulation is accounted for not only by organic but also by mineral silt. This phenomenon is observed in all varieties of sod-podzol garden soils, but is absent in podzol soils; 4. In sod-podzol soils, a considerable

destruction of the upper podzol layer is established. The erosion of the silt fraction in this upper layer by comparison with the soil-forming type reaches 70-85%. The characteristic feature of the described sod-podzol soils is their similarity to gray forest soils. The analytical data are given in 22 tables. The study was accomplished in the Soil Institute, Academy of Sciences, USSR. Bibl. 23 refs.

1517. VADKOVSKAYA Yu. D. Lab. of Path. Physiol., Inst. of Intern. Med., Acad. of Med. Sciences, USSR, Moscow *The renal contents of rennin in fatal cases of hypertensive disease and in rabbits suffering from experimental coarctation of aorta and cholesterol atherosclerosis (Russian text)* Bjull. eksper. Biol. Med. 1956, 41/6 (23—27) Illus. 1 Tables 2

The renal contents of rennin were estimated in 4 groups of dead bodies (18-69 age group). The first group consisted of 14 cases in which death was caused by trauma and served as control. The 2nd group consisted of 11 patients dead as a result of malignant hypertension. In the 25 cases of the 3rd group death followed the usual course of hypertensive disease and this group included 13 cases of hypertensive heart disease. The 4th group comprised 6 cases of chronic nephritis. The rennin contents of the prepared extracts were estimated biologically. Rennin or hypertensin preparation obtained by incubation of extracts with hypertensinogen was injected into the dogs and the changes in the animal's blood pressure were taken as an index of the activity of the preparation. The time interval between death and post mortem varied between 3 and 30 hr. Greatest rise in the dog's blood pressure (20-80 mm.) was caused by extracts obtained from the cases of malignant hypertension. Preparations obtained from the control group did not raise the blood pressure by more than 15 mm. The extracts from the 2 remaining groups (predominant hypertensive heart disease and chronic nephritis) caused similar or even smaller rise. Additional experiments proved that post-mortem autolysis does not alter the amount of rennin in the kidneys. Using extracts obtained from rabbits suffering from hypertension secondary to coarctation of aorta a significant rise was obtained in 8 out of 10 cases. In 17 cases of experimental cholesterol atherosclerosis of rabbits no dependence of renal contents of rennin on the severity of the atherosclerotic changes was found.

paper presented at the 4th All-Union Conf. on Acoustics, Moscow, 26 May - 2 Jun 58.

Changes in the blood enzymes of the rat and mouse caused by the development of malignant tumors. A. N. Konikova and A. V. Vadova. *Arch. sci. biol.* (U. S. S. R.) 50, No. 3, 48-50 (in English, 50) (1958).—The period of intense growth of malignant tumors is accompanied by an increase in the activity of blood amylase and ptotase (I). In rats the amt. of residual N in the blood decreases during the entire period of tumor development. During the period of intense tumor growth the rate of diminution is greater than in the period of necrosis. An increase in the activity of I and a decrease in residual N in the blood may serve as indicators of the presence of tumors in a period of intense growth. S. A. Karjala.

with 10% formalin solution. The material was fixed in 10% formalin solution for 24 hours and then embedded in paraffin. A series of 15-16 injections were given in the papilloma. Repeated administration of I led to the regression of the papilloma causing the degenerative and destructive changes of the tumour cells and the spread of connective tissue. Complete regression of the tumours did not, however, take place. No toxic effects of I were observed in this series of experiments. The effect in form of an antitumour androgenic and antiandrogenic effect was observed following 3-4 subcutaneous injections of I. The effect was the appearance of multi-nucleate cells with prominent nucleoli. Simultaneously the animals showed general weakness, loss of weight and to their death. In order to determine the effect of I in comparison with a known antiandrogenic agent, the following was given at intervals of 3 days. The symptoms were similar to those of the life span of the animals was...

Title        : Neutralization of the virus of papilloma

Periodical : Byul. eksp. biol. i med. 39, 57-62, Jan 1955

Abstract    : The virus of rabbit papilloma is not yet known. The authors believe that it is "masked" by the developing tumor cells. They tried to isolate it from a malignant papilloma transplanted to the scarified skin of a healthy rabbit. The virus itself was not isolated but after a series of negative results, the authors found that it loses its pathogenic properties when mixed with the proteins of cancer tissues, and that union with normal tissues activates it. Neutralization of the virus could be observed in vitro and in vivo. The authors then investigated the effect of mixed carcinoma and papilloma material under similar conditions. Results were positive; the carcinoma
