TITLE: Determination of the contrast product ioduron

SOURCE: Revista de chimie, v. 17, no. 2, 1966, 108

TOPIC TAGS: iodinated organic compound, analytic chemistry

ABSTRACT: The authors describe the determination of the contrast medium Ioduron by means of the mineralization of the organically bound iodine by the action of nascent hydrogen in alkaline medium, followed by determination of the halogen by the Volhard method. The analysis is rapid and accurate and gives reproducible results. Orig. art. has: 1 table and 1 formula. [JPRS: 36,556]

L.V. Gessen; Tech. Ed.: S.M. Polesitskaya.

PURPOSE: The book is intended for the general reader.

COVERAGE: This book is a bio-bibliographical sketch of the life and
works of the Soviet scientist Aleksandr Alekseyevich Lebedev con-
taining a complete list of his scientific contributions and a
bibliography of 11 items on Lebedev himself. His own writings
consist of 37 books written and 9 edited. In the biographical

Card 1/4

SOV/1768

Aleksandr Alekseyevich Lebedev

sketch, the only narrative chapter in the pamphlet, Lebedev is commended for his endeavors in the field of optics, and especially for his contributions to optical methods in engineering measurement. Some information is also available on Lebedev's role in political life. An Academician since 1943, he was elected a Deputy to the Supreme Council of the Soviet in 1954. His scientific contributions have been centered in the following particular fields: diffraction of x-rays and electrons and diffraction patterns; infrared rays; wave interference; light modulation; and the design of new scientific apparatus, including two electron microscopes and a photometric range finder. A short description of these and other instruments designed or codesigned by him is given. The pamphlet mentions a number of his pupils, some of whom are considered eminent scientists: Among these are A.I. Stozharov, N.A. Tudorovskaya, V.A. Florinskaya, N.N. Valenkov, Ye.A. Poray-Koshits, G.O. Bagdyk'yants, V.N. Vertsner, and N.G. Zandin. The article mentions his close coworkers N.F. Timofeyev, M.F. Romanova, A.A. Ferkhmin, L.B. Ponizovskiy,

TITLE: Procurement of short light flashes by disrupting total internal reflection

SOURCE: Optika i spektroskopiya, v. 14, no. 5, 1963, 713-715

TOPIC TAGS: optical shutter, high-speed shutter, short light flash, internal reflection

ABSTRACT: A simple light shutter has been developed, consisting of a totally reflecting three-faced prism, a light-absorbing glass plate, a nickel rod attached at one end to the glass plate, and a solenoid mounted on the rod. The prism and the plate have the same refraction index. Shutter operation is based on the prevention of total internal reflection in the prism by the glass plate when it is in contact with the prism. The shutter is opened by breaking the contact between the prism and glass plate by means of the magnetostriction effect in the rod. Shutter opening, accomplished by discharging a 0.25- μ f, 3200-v capacitor in series with the solenoid, has a duration of 6-7 μ sec. Shutter-opening delay with

Card 1/2

L 10491-63

ACCESSION NR: AP3000589

respect to the discharge time is approximately 10 μ sec. The opening delay can be controlled by shifting the position of the solenoid along the rod. It was found that some light passes through when the shutter is closed because of a thin film, whose refraction index is close to that of quartz, formed on the glass surface. This light constitutes 0.4~1.2% of the total light transmitted by the open shutter. However, being totally polarized, the leakage can be eliminated by a polarization filter. TITLE: Procedure for measuring the depth of modulation of light flux

SOURCE: Zhurnal prikladnoy spektroskopii, v. 5, no. 3, 1966, 284-287

TOPIC TAGS: light modulation, luminescence, photoconductivity, Kerr cell

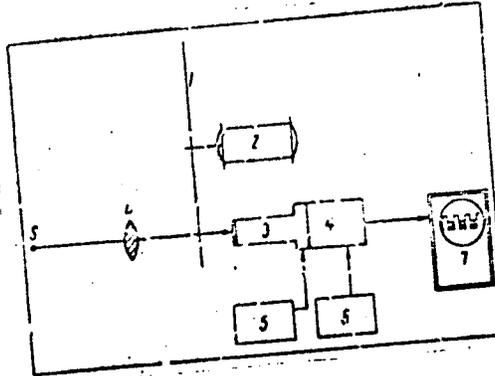

ABSTRACT: In view of the development of new types of modulators for use with research on luminescence kinetics and photoconductivity, the authors describe apparatus, aimed at comparing different modulators, for the measurement of the depth of modulation of light flux from a light modulator or from a source of modulated light. The principle of the apparatus (Fig. 1) is based on interrupting the light by a rotating perforated disc and measuring the oscillograms of the output of photomultiplier on which the interrupted light is incident. A Kerr cell was used as a standard modulator producing a constant depth of light-flux modulation. The use of the Kerr cell made it possible to correct the photomultiplier readings for inertia occurring at different frequencies. As an example illustration of the operation of the equipment, it was used to measure the depth of modulation of the light flux from a neon lamp (type TF-0.20) at 4 Mcs. Orig. art. has: 4 figures, 3 formulas and 1 table.

TITLE: Synthesis of serine O-glycosides

SOURCE: AN SSSR. Izv. Seriya khimicheskaya, no. 9, 1964, 1728

TOPIC TAGS: serine, serine glycoside, serine O glycoside, peptide bond, polysaccharide bond, glycopeptide, pyranoside, dextrorotatory, laevorotatory, serine glycoside melting point, crystallization, hydrogenolysis

ABSTRACT: We have realized the synthesis of the O-glycosides of serine, models of one of the possible bond types of the peptide and polysaccharide part in natural glycopeptides. We obtained the O-β-D-(2, 3, 4, 6-tetra-O-acetyl)glucopyranoside of the methyl ester of N-carbobenzoxy-D,L serine (I) (40% yield) by the interaction of 2, 3, 4, 6-tetra-O-acetyl-α-D-glucopyranosylbromide with the methyl ester of N-carbobenzoxy-D, L-serine in the presence of Ag₂CO₃. By crystallization of (I) from an ether-hexane mixture, we isolated D-I (m. p. 95.5C, [α]_D - -27C with

Card 1/2

L 16156-65
ACCESSION NR: AP4045804

2, chloroform, yield 10%). We obtained L-I (m. p. 93, $[\alpha]_D^{25} + 16$ (with 1, chloroform), yield 40%) under analogous conditions from the methyl ester of N-carbobenzoy-L-serine. By desacetylation of D-I and L-I by the action of $(C_2H_5)_3N$ in absolute CH_3OH we obtained the corresponding O- β -D-glycopyranoside of the methyl ester of N-carbobenzoy-D-serine (D-II, $[\alpha]_D^{25} - 3.3C$ (with 1.77, CH_3OH), yield 84%) and O- β -D-glucopyranoside of the methyl ester of N-carbobenzoy-L-serine (L-II, $[\alpha]_D^{25} - 10C$ (with 0.5, CH_3OH), yield 92%). Hydrogenolysis of D-II and L-II over Pd/ $BaSO_4$ in aqueous CH_3OH obtained the corresponding hydrochlorides of O- β -D-glycopyranoside of the methyl ester of D-serine ($[\alpha]_D^{25} + 6C$ (with 2, water) 18.5C (with 2, water), yield 84%) and of O- β -D-glucopyranoside of the methyl ester of L-serine ($[\alpha]_D^{25} -$

AUTHOR: Vagabov, A. I.

TITLE: Reasonableness conditions on homogeneous mixed problems for hyperbolic systems

SOURCE: AN SSSR. Doklady*, v. 155, no. 6, 1964, 1247-1249

TOPIC TAGS: partial differential equation, hyperbolic system, Kovalevski system, Green's function, homogeneous mixed problem, spectral problem

ABSTRACT: Consider the mixed problem for a Kovalevski system

$$\frac{\partial^p u}{\partial t^p} = \sum_{\substack{k_1 < p-1 \\ k_1 + k_2 < p}} A^{(k_1, k_2)}(x) \frac{\partial^{k_1+k_2} u}{\partial t^{k_1} \partial x^{k_2}} + f(x, t); \quad (1)$$

$$\sum_{\substack{k_1 < p-1 \\ k_1 + k_2 < p}} \left\{ \alpha^{(k_1, k_2)} \frac{\partial^{k_1+k_2} u}{\partial t^{k_1} \partial x^{k_2}} \Big|_{x=a} + \beta^{(k_1, k_2)} \frac{\partial^{k_1+k_2} u}{\partial t^{k_1} \partial x^{k_2}} \Big|_{x=b} \right\} = 0; \quad (2)$$

$$\frac{\partial^k u}{\partial t^k} \Big|_{t=0} = \psi_k(x) \quad (k = 0, \dots, p-1), \quad (3)$$

Card 1/4

ACCESSION NR:AP4034024

where the $A^{(k_0 k_1)}(x)$ are n by n matrices; $f(x, t)$, $u(x, t)$, $\psi_H(t)$ n by 1 column matrices; $\alpha^{(k_0 k_1)}$, $\beta^{(k_0 k_1)}$ constant n by n rectangular matrices. Let $A(x)$ denote the square matrix ...

$$A(x) = \begin{pmatrix} A^{(p-1,1)}(x) & A^{(p-2,2)}(x) & \dots & A^{(0,p)}(x) \\ E & 0 & \dots & 0 \\ 0 & E & \dots & 0 \\ \cdot & \cdot & \dots & \cdot \\ \cdot & \cdot & \dots & \cdot \\ 0 & 0 & \dots & E \end{pmatrix}$$

where E is the identity matrix of order n . Conclusion: Problem (1)-(3) has a unique solution, depending continuously on the given functions, and given by the formula

$$u(x, t) = -\frac{1}{2\pi\sqrt{-1}} \sum_{c_0} \int_{c_0} \lambda^{1-p} e^{i\lambda t} d\lambda \int_a^b G(x, \xi, \lambda) (A^{(0,p)}(\xi))^{-1} (F(\xi, \psi, \lambda) + \int_0^t e^{-\lambda\tau} f(\xi, \tau) d\tau) d\xi$$

Card 2/4

ACCESSION NR: AP4034024

where C_V is a simple closed contour containing only one pole λ_V of the integrand, $G(x, \xi, \lambda)$ is Green's function for the spectral problem

$$\sum_{\substack{k_1 < p-1 \\ k_1 + k_2 < p}} \lambda^{k_1} A^{(k_1, k_2)}(x) \frac{d^{k_1+k_2} v}{dx^{k_1+k_2}} - \lambda^p v = F(x, \psi, \lambda); \quad (7)$$

$$\sum_{\substack{k_1 < p-1 \\ k_1 + k_2 < p}} \lambda^{k_1} \left\{ \alpha^{(k_1, k_2)} \frac{d^{k_1+k_2} v}{dx^{k_1+k_2}} \Big|_{x=a} + \beta^{(k_1, k_2)} \frac{d^{k_1+k_2} v}{dx^{k_1+k_2}} \Big|_{x=b} \right\} = 0; \quad (8)$$

$$F(x, \psi, \lambda) = \sum_{k_1=0}^{p-1} \lambda^{p-1-k_1} \psi_{k_1}(x) -$$

$$- \sum_{\substack{1 < k_1 < p-1 \\ k_1 + k_2 < p}} A^{(k_1, k_2)}(x) \frac{d^{k_1+k_2}}{dx^{k_1+k_2}} (\lambda^{k_1-1} \psi_0(x) + \dots + \psi_{k_2-1}(x)).$$

It is also stated that in case of simple poles for the spectral problem (7)-(8), the hyperbolicity condition is necessary for the existence of a solution to problem (1)-(3). For the methods used in the proof (residues and contour integration), the reader is

TITLE: Synthesis of dialkylhydroquinone esters of phosphorous acid ↑

SOURCE: Azerbaydzhanskiy khimicheskiy zhurnal, no. 3, 1966, 21-23

TOPIC TAGS: antioxidant additive, lubricant additive, organic phosphorous compound

ABSTRACT: New phosphorous esters suitable as antioxidant additives for lubricating oils have been prepared. 2,5-Di-tert-butylhydroquinone was reacted with phosphorus trichloride to form the phosphorochloridous ester, which in turn was reacted with heptyl, octyl, nonyl, or decyl alcohol in the presence of triethylamine to form the appropriate phosphorous ester:

✓Vitamin C content of human milk as found in maternity homes of Tallin. E. P. Vagane (Inst. Exptl. Clin. Med., Acad. Sci. ~~USSR~~ Tallin). *Voprosy Pitaniya* 12, No. 6, 59-63(1953).--The amt. of vitamin C (I) in human milk (of 600 mothers) during Jan.-July is very low, approx. 3 mg.%; in the next 5 months of the year it is twice as high. The low concn. of I in the milk during the winter-spring period is related to the concn. of I in the local varieties of potatoes, the main food of the population. The addn. of I to the diet in the amt. of 300 mg./day increased the I concn. of milk from 1.2 to 4.5 mg. % within 4-7 days. The addn. of 500 and 600 mg. I/day increased the excretion of I in urine after the level of I in the milk had reached the concn. of 4.6 mg. %. It is concluded that under the nutritional conditions of Tallin the addn. of the diet of 200-300 mg. I/mother/day is required during the first half of the year. E. Wiert

VAGANE, E.P.

SPK

✓ The vitamin C content in potatoes and some vegetables
is high and the vitamin C content in the USSR. Estimating potatoes and
vegetables contain a high amount of vitamin C in the fall and
can satisfy the vitamin demands during late summer, fall,
and early winter. However, the supply may prove locally
insufficient during the winter, spring, and early summer,
since much of the vitamin C is lost by then.

AUTHOR: Vaganov, A.

TITLE: Radioactive-Particles Counter (Schetchik radioaktivnykh chastits)

PERIODICAL: Radio, 1956, Nr5, pp. 33-34 (USSR)

ABSTRACT: A description of an amateur-type self-made radiation counter for measuring 40 to 4,000 pulses per minute; voltage 350 to 2,200 v. The instrument is designed for practically any Soviet-made radiation counter. Battery power supply: two type 5AC-Г-60 for plate circuits, one element 3C-П-30 for filaments. Plate-circuits current 10 ma, filament current 120 ma. Batteries life: 2-3 hrs of operation a day for 1 to 1½ months. A rather primitive 12-thyratron scaler has the maximum reading of 4095. Head phones are also provided. Chassis dimensions: 275 x 195 mm.

A second, very simple radiation counter is also described. It consists of a squegging oscillator, a selenium rectifier, and a filter unit, and operates at 350 to 400 volts. Audio reading only.

AUTHOR: Vaganov, A. (Khar'kov)

TITLE: A New Photocolorimeter. For the national economy.
(Novyy fotokolorimetr. Dlya narodnogo khozyaystva.)

PERIODICAL: Radio, 1957, Nr 6, p 10 (USSR)

ABSTRACT: The author is trying to develop a new device for investigation of photosynthesis of plants. The device is intended for quantitative determinations of chlorophyl by a photocolorimetric method. A beam of light is passed through a red filter and through a mixture of yellow and green plant pigments dissolved in alcohol or acetone and then falls on a photo-resistor. The degree of absorption of light measures the quantity of the pigment. Type FS-B2 photo-resistor has a number of advantages over photocells. It is miniature and has a higher sensitivity and is non-aging. Such a photocolorimeter will help to study the life of plants.

AUTHORS: Yermolin, N. P. and Vaganov, A. P. [deceased] Call Nr: AF 1138798
TITLE: Calculation of Low-Powered Transformers (Raschet malomoshchnykh transformatorov)
PUB. DATA: Gosudarstvennoye energeticheskoye izdatel'stvo, Moscow-Leningrad, 1957, 144 pages, 15,000 copies
ORIG. AGENCY: None
EDITOR: Yermolin, N. P., Dr. of Tech. Sc., Professor; Editor of the publication; Andreyev, N. I.; Tech. ed.: Zabrodina, A. A.
PURPOSE: The monograph is intended for engineers and technicians working on the production of low-capacity power transformers and designing radio receiving and transmitting and also automatic control systems. It may also be of use for university and technical school students.

Card 1/12

Call Nr: AF 1138798

Calculation of Low-Powered Transformers (Cont.)

COVERAGE: The book presents in a systematic form the methods of calculation and design of low-capacity power transformers, auto-transformers, peak and pulse transformers. Examples of engineering calculations are given. No personalities or institutions are mentioned. However, several types of transformers of Soviet design and production are described and some specifications are given. There are 8 references, 5 of which are Soviet, and 3 are translations.

TABLE OF CONTENTS

Introduction	3
Chapter One: Low-Capacity Power-Transformers	5
I. General Remarks	5
II. Calculation of Single-Phase and Three-Phase Low-Capacity Power Transformers	14
1. Determination of transformer currents	16

Card 2/12

Call Nr: AF 1138798

Calculation of Low-powered Transformers (Cont.)

2.	Selection of induction in the rods and yoke of the transformer core	17
3.	Selection of current density in the transformer winding wires	17
4.	Determination of transformer core rod and yoke cross-section	17
5.	Determination of the number of transformer winding turns	20
6.	Determination of winding wire cross-section and diameter	21
7.	Selection of winding wire insulation	22
8.	Determination of height and width of transformer core opening	22

Card 3/12

18.	Short-circuit impedances and voltages of transformer windings	33

Card 4/12

Call Nr: AF 1138798

Calculation of Low-powered Transformers (Cont.)

19.	Change in transformer voltage under load	35
20.	Temperature tests of transformers	36
21.	Summary calculation data on transformers	37
III.	Sample Calculation of a Low-Capacity Single-Phase Three-Winding Transformer	38
	Chapter Two: Low-Capacity Power Autotransformers	47
I.	General Remarks	47
II.	Calculation of Single-Phase and Three-Phase Low-Capacity Autotransformers	48
1.	Rated capacity of autotransformers	48
2.	Determination of autotransformer currents	49

Card 5/12

Call Nr: AF 1138798

Calculation of Low-Powered Transformers (Cont.)

3.	Current determining for individual parts of transformer winding	51
4.	Selection of induction in the autotransformer core rod	52
5.	Selection of current density in autotransformer winding wires	52
6.	Determination of autotransformer core rod and yoke cross-section	53
7.	Determination of the number of autotransformer winding turns	53
8.	Determination of winding wire sections and diameters	54
9.	Selection of winding wire insulation	54
10.	Determination of core opening heights and widths, arrangement of windings on rods, and making more precise autotransformer core opening sizes	54

Card 6/12

Call Nr; AF 1138798

Calculation of Low-Powered Transformers (Cont.)

11. Copper weight of autotransformer winding	55
12. Copper losses of autotransformer winding	55
13. Steel weight and losses in autotransformer core	56
14. Determination of autotransformer no-load conditions	56
15. Autotransformer efficiency	56
16. Change of autotransformer voltage under load	57
17. Temperature test of autotransformer	58
III. Sample Calculation of a Single-Phase Low-Capacity Autotransformer with Tapped Winding	58
Chapter Three: Peak Transformers	67

Card 7/12

Call Nr: AF 1138798

Calculation of Low-powered Transformers (Cont.)

I. General Remarks	67
II. Calculation of Peak Transformers	73
1. Types of peak transformers	74
2. Determination of transformer secondary rod cross-sections	75
3. Determination of the number of secondary winding turns	76
4. Determination of the secondary winding wire sections and diameters, and of secondary rod lengths	76
5. Determination of the main rod cross-sections.	77
6. Definition of the number of primary winding turns	79
7. Determination of the primary winding wire sections and diameters, and its arrangement on the main rods	79
8. Determination of the size of magnetic shunts for non-regulating transformers	82

Card 8/12

Call Nr: AF 1138798

Calculation of Low-powered Transformers (Cont.)

9. Determination of the number of turns and of wire diameters of the regulating adjusting winding, and its arrangement on the main rod	83
10. Definition of the size of magnetic shunts for regulating transformers	85
11. Plotting a secondary peak voltage time curve for no-load conditions	86
12. Mean lengths of transformer winding turns	90
13. Copper weight and winding resistance.	90
14. Losses in winding copper at 75°C	91
15. Steel weight of transformer core	91

Card 9/ 12

Call Nr: AF 1138798

Calculation of Low-powered Transformers (Cont.)

- 16. Losses in core steel 92
- 17. Determination of transformer no-load conditions current 94
- 18. Temperature test of transformer 94
- III. Sample Calculation of a Regulating Peak Transformer 95
- Chapter Four: Pulse Transformers 107
 - I. General Remarks 107
 - II. Calculation of Pulse Transformers 111
 - 1. Determination of transformer average capacity and currents 112
 - 2. Types of pulse transformers 113
 - 3. Selection of induction increment and thickness of core material sheets 115
 - 4. Determination of rod cross-sections and of the average length of transformer core magnetic circuit 116

Card 10/12
