"The Development of Crystalline Inclusions in Nerve Cells During Experimental Infection of Mice with Certain Enteroviruses"

Sofia, Doklady Bolgarskoy Akademii Nauk, Vol 19, No 3, 1966, pp 249-251

Abstract: [French article] The authors described earlier paralytic forms in mice which were caused by infection with the virus Coxsackie A 11 and ECHO 6. A comparison was made with experimental infection with poliovirus types I and II. The present article describes (using several photographs) two types of crystalline inclusions found in nerve cells. This observation was made possible by cytologic and cytochemical methods used by the authors and these are described in considerable detail. There are 3 Bulgarian, 1 Soviet, and 2 Western references. TITLE: Oxidation kinetics of Sphalerite in sodium hypochlorite solution

SOURCE: Bulgarska akademiya na naukite, Doklady, v. 18, no. 2, 1965, 125-128

TOPIC TAGS: mineral, oxidation, sodium compound, chlorine compound, solution property, thermochemistry

ABSTRACT:

The kinetics of oxidation of molybdenite, chalcopyrite, pyrite, and galenite in sodium hypochlorite solutions were discussed in several previous papers (see, e.g., Kh. Yordanov, Tekhnika, 1962; Kh. Vasilov, Godishnik KhTI, IX, 1962, No 2). The present paper studies the physicochemical foundations of sphalerite oxidation in sodium hypochlorite solutions. Experimental results show that sphalerite oxidizes in NaOCl solutions forming $Zn(OH)_2$ and SO_4^{2-} . The temperature coefficient of the process is between 1.05 and 1.19. The calculated apparent activating energy of the process in the 20-80° C temperature interval is 4,600 cal/mol. The paper concludes by proposing a possible mechanism of sphalerite oxidation in sodium hypochlorite solution. Orig. art. has: 4 graphs, 3 formulas.

Title : On the Work Function of Gold and Aluminum During
Vacuum-Air Transition
Orig Pub : Dokl. Bolg. Akad. Nauk 1958, 11, № 6, 461-464

Abstract : A method of contact difference of potential was used
to measure the work function of freshly evaporated
gold and aluminum in vacuum and in air with respect
to old gold, passivated in air, taken to serve as a
standard. The work function of the gold standard
 φ_{Au} was assumed to be 4.8 ev (its average value,
obtained in several other experimental investigations).
By measurement in vacuum, values $\varphi_{Au} = 4.48$ and
 $\varphi_{Al} 3.15$ ev were obtained. The variation of the
work function with time in air for gold and aluminum

is plotted. Investigations have shown that owing to the interaction with the air, one can assume that there exists in metals two types of surface variations: irreversible, due probably to chemical changes in the surface, and reversible -- absorption of gases and vapors, contained in the surrounding atmosphere.

ORG: Department of Microbiology and Virology, Department of Pathological Anatomy,
Post-Graduate Medical Institute, SofiaTITLE: Sensitivity of newly born albino mice to the sheep abortion virus upon
intraperitoneal infection

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 1, 1965, 85-88

TOPIC TAGS: mouse, virus, virology, pathology, histology

ABSTRACT: J. T. Stamp et al. (Vet. Res., 1950, 251-254) were the first to isolate the sheep abortion virus. F. R. Giroud et al. (Acad. Vet. Fr., 23, 1956, No 8, 353-401) found elementary corpuscles in mice infected peritoneally and killed on the 15-th day, while H. Parker (Vet. Res. 21, 1960, No 81, 243-250) and D. Saratianu et al. (Stud. cerc. inframicrobiol, XII, 1961, 1, 95-103) infected mice intracerebrally and succeeded in establishing elementary corpuscles. Nevertheless, the problem of finding a convenient laboratory model for experimental infection remained of considerable interest because of the pathogenic significance of the virus and the subsequent damage caused by its infection. Consequently, the authors attempted sensitivity tests to the sheep abortion virus with newborn albino mice one and three days old.

Card 1/2

L 4374-66
ACC NR: AP5028433

They used the local Tsalapits strain and found that newborn mice are sensitive to intraperitoneal infection; infected animals died five days after the infection. The elementary corpuscles of the virus are to be found in the liver of the infected animals. The pathohistological changes occurring in the newborn mice infected with the virus consist of a general displacement of the elements of the reticuloendothelial system resulting in great swelling and proliferation of the endothelia of the vessels of the separate organs, the reticuloendothelial cells of the liver and spleen in particular. Peculiar giant cells are found in the liver and the spleen. In addition to the reticuloendothelial changes, there are lympho-leucocytic infiltrates observed in the organs which are of a diffuse character in some places, although in most instances they show a focal perivasal position. There is a sharply pronounced stasis in all organs and in some places hemorrhagia and extravasates. The pathohistological changes in the cerebrum are represented by microencephalomalatic sections in some places and by lymphocytic infiltrates in others. The work was presented by A. Toshkoy, Corresponding Member, of BAN, 16 Sep 64. Orig.art. has: 5 figures, 1 table.

TITLE: Auto-immunization and auto-allergization in preliminary x-ray treated guinea pigs infected with tuberculosis

SOURCE: Bulgarska akademiya na naukite, v. 18, no. 2, 1965, 165-168

TOPIC TAGS: immunology, experiment animal, biochemistry, immunization, radiology, radiation biologic effect, tuberculosis

ABSTRACT: [English article] It was established in previous investigations by the authors (Izv. Mikrobiol. inst. BAN, 15, 1963, 115; Immunitäts- u. Allergieforsch., 125, 1963, 207) that complement-fixing leuco-, pulmo-, and cerebro-antibodies could be detected in the serum of some tuberculous patients with chronic empyema. Comparing this with the findings of other researchers who found leucosgglutins in patients with splenic tuberculosis (see, e.g., S. Moeschlin, Acta Scand. Suppl., 312, 1956, 518) and pulmonantibodies in patients with cavernous lung tuberculosis (A. T. Honnes et al., Amer. J. Resp. Dis., 83, 1961, 354), the authors stressed the role of tuberculosis infection in the induction of a 'polyspecific' auto-immunization process in

Card 1/2

L 4353-66
ACC NR: AP5028779

the affected organism. Experimental studies, part of which are the subject of the present communication, were performed with the aim of further elucidating this problem. As has been shown in the guinea pig infection model, it seems that mycobacterium tuberculosis humanum, strain H₃₇Rv, plays a significant role in inducing auto-antigenicity of a 'polyspecific' character. The pre-treatment with 400 r irradiation, producing conditions for a wider spread and deeper penetration of the infection, increases the possibilities of inducing auto-antigenicity and accelerates the autoimmunization process. Irradiation causes inhibition (up to the 50th day) of the delayed type of hypersensitivity in animals infected with tuberculosis. In some cases only auto-sensitization with respect to extracts of lymph node, brain, and peritoneal leucocytes is established on the 50th day or later after the infection. The induction of auto-antigenicity in the concrete case might be ascribed rather to the infection's direct action (the effect of irradiation being added to it) upon the tissues than to changes in the immunological competence of the antibody-forming cells caused by the radiation. The work was presented by A. Toschkoff, Corresponding Member of BAN, 30 Sep 64. Orig. art. has 2 tables. [JPRS]

TITLE: Radiation gynogenesis in *Salmo irideus* Gibb

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 4, 1965, 359-362

TOPIC TAGS: radiation biologic effect, biologic reproduction, genetics, irradiation, experiment animal

ABSTRACT: The diploid radiation gynogenesis of *Salmo irideus* Gibb. has been investigated. While D. D. Romashov et al. claimed they obtained diploid radiation gynogenesis with bone fish whose sperm was irradiated with 100,000 to 1,000,000 r, (see, e.g., Biofizika, 5, 1960, No. 4; Symp. Radiatsionnaya genetika [Radiation Genetics], M., 1960), the authors of the present study obtained the effect with a dose only half as strong (50,000 R) while in the case with sperm irradiated with 200,00 r the zygote developed gynogenetically only up to the stage of gastrula.

ACC NR: AP6008214

O

These differences raise a question about the effect of spermatozoa irradiated with high doses on the development of the embryo. It seems possible that with the different species the strong doses affect differently the result of radiation gynogenesis. The paper was submitted by Academician D. Yordonov, 26 August 1964. TITLE: Changes in the sex correlation depending on the age of parents in Drosophila melanogaster

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 1, 1965, 59-61

TOPIC TAGS: entomology; biologic reproduction, cell physiology

ABSTRACT: [English article] In the course of earlier studies the authors established changes in the correlation of sexes under the effect of variable high and low temperature (Dokl. BAN, 17, 1964, No 10). A number of investigations have been initiated to establish the effect of the age differences of sex cells on the formation of sex. R. Khortvig, Novyye idei v biologii, 7, 1912) showed with overmature eggs of frog that there is an increase in the percentage of the male specimens with the aging of the eggs and upon their fertilization with normal spermatozoa. S. B. Zhegalov (Usp. sovr. biol., 1, 1950, 4) established that during the artificial breeding of silvery-black foxes the female specimens under four years unfailingly give birth to a greater number of female specimens, after which the correlation

Card 1/2

L 20829-66

ACC NR: AP5028426

begins to change in favor of the male ones. The purpose of the present investigations was to show the effect of age differences between the parents, or between the cells, on the correlation of sexes in the progeny of Dr. molanovsster. The tabulated data reveal that the greatest deviations compared with the controls are presented by the variant of crossing old female and young male specimens. The reverse case did not supply statistically reliable results. The authors believe that the correct solution of the problem of sex related to the age of the parents, or of the sex cells respectively, can be reached only if it is linked with and interpreted from the point of view of the synthesis and aging of protein as well as of coding. Further thorough investigations seem to be necessary. The work was presented by D. Yordanov, Academician, 18 Aug 64. Orig. art. has: 1 table. [JPRS]

TOPIC TAGS: radiation plant effect, plant morphology, nuclear reactor, gamma ray, fast neutron, plant metabolism, ionizing irradiation, plant development/IRT-1000 nuclear reactor

ABSTRACT: There have been in the past an increasing number of studies on the radio-stimulating and inhibiting effect of ionizing irradiations on plants and on the changes caused in their cytological picture. The present investigation examines mainly the morphological changes of the nucleoli in dry and germinated seeds. Tests were carried out with the Earliest-of-All and Moskovsky varieties of garden peas and with the fodder variety of field-grown peas which involved gamma rays and rapid neutrons. Irradiation was carried out in the IRT-1000 reactor near Sofia with a pure gamma field of 3 roentgens per second after stopping the reactor, and with a mixed field involving a predominant percentage of fast neutrons at 5 roentgens per second during reactor operation. The seeds were irradiated in sealed polyethylene bags, the doses being

10, 30, 50, 100, 500, 1000, and 5000 r., and were placed for the purpose of germination in a thermostat at a definite humidity and at a temperature of +23°C. Numerous data collected and presented in the article indicate that the observed cytological changes are indicative of profound deviations in the all-round metabolism of the dry and germinated seeds of peas irradiated with gamma rays and fast neutrons. "Tube Growth Following Pollen Irradiation in Tradescantia"

Sofia, Doklady Bolgarskoy Akademii Nauk, Vol 19, No 7, 1966, pp 649-651

Abstract: [English article] No previous studies in Tradescantia of the pollen tube growth and of the development of the generative nuclei from the stigma to the embryo sac following pollen irradiation are known. Consequently, the author followed the growth of pollen tubes and the changes of the male chromatin from the stigma to the embryo sac following pollen irradiation with X- and gamma ray doses of 1,000 to 5,000,000 r. Flowers of diploid and tetraploid material of Tradescantia paludosa were pollinated with irradiated pollen and fixed in Carnoy from 1 hour to 10 days after pollination (14 fixations per variant). The paper gives an exhaustive description of the observed events. It shows among others that with higher doses the four half-chromatids can be separated from every chromosome and that the breakage can be interpreted as the consequence of half-chromatid breakage and interchanges. There are 12 Western references. (Manuscript received, 30 Mar 66.)

"Cultivation of Sheep Abortion Virus in Tissue Culture of Tortoise Lungs
(Testudo graeca)"

Sofia, Doklady Bolgarskoy Akademii Nauk, Vol 19, No 3, 1966, pp 237-240

Abstract: /English article/ D. Shindarov and Z. Savov (Compt. rend. Acad. bulg. Sci., 17, 1964, No 10, 981) reported earlier on the cultivation of the sheep abortion virus in tissue culture of cold-blooded animals (tortoise kidney epithelium). The present paper contains the results of studies on the reproduction of the sheep abortion virus in the tissue culture of the lungs of the same animal. Results of the experiments, described in considerable detail. indicate that 1) the sheep abortion virus can multiply itself in a primary monolayer tissue culture of the lungs of a cold-blooded animal (Testudo graeca); 2) virus multiplication in tissue culture causes a cytopathic effect primarily of a focal character; 3) the maximum in the virus accumulation during its multiplication in the culture is about the 6th to 7th day after inoculation. There are 3 Bulgarian and 1 Western reference. (Manuscript received, 30 Nov 65.)

B"Certain New Derivatives of Allylthiourea"

Sofia, Doklady Bolgarskoy Akademii Nauk, Vol 18, No 11, 1965, pp 1011-1014

Abstract: [English article] Numerous thiourea derivatives generate pronounced biological activities of different kinds. During the current investigation the author synthesized certain new allylthiourea derivatives with the aim of testing their biological activity. Eleven new substances were obtained by known methods from allylisothiocyanate or Oleum Sinepis and the corresponding amines. The growth regulating properties of the majority of the synthesized substances was determined on wheat and cucumber seeds by E. Karanov at the Methodi Popoff Institute of Plant Physiology of the Bulgarian Academy of Sciences. Tests show that within the 10^{-2} to 10^{-3} g mol/litre concentration range the new substances are more active than thiourea and allylthiourea. Other types of tests are currently in progress. This paper was presented by Corresponding Member BAN A. Spassov on 19 July 1965. Orig. art. has: 1 table.

VASSILIU D.

2161 VASSILIU D. Bucharest. *Deafness following mumps (Russian text) VESTN. OTO-RINO-LARING. 1957, 3 (92-96)

Deafness is a rare complication of mumps. The mechanism of development of deafness following this disease, caused by an ultravirus, is not yet clear. Transitory deafness accounts for the reversibility of such changes as: lymphocytary infiltration, haemorrhages in the perineurial space of the cochlear nerve and others. The author considers that deafness caused by either this disease or by the influenza virus is attributed exclusively to the destruction, or the total degeneration of the vascular villi. As there are no other sources for the endolymph formation in the cochlea, their destruction impairs the nutrition of the cells. Granulations formed in the endolymph completely destroy the organ of Corti. (XI, 20)

TITLE: On the proof of the theorems of the flow theory for
work-hardening materials

PERIODICAL: Vestnik Moskovskogo Universiteta. Seria I. Matematika,
Mekhanika. no.5, 1962, 60-64.

TEXT: Little was known in the flow theory of work-hardening materials in case the function of hardening h depends on the history of the stress and deformation and thus may be homogeneous of degree zero in the stress rates. (The assumption that h is independent of the stress rates is not admissible even as approximation to reality).

The author indicates a class of functions h homogeneous of degree zero in the stress rates for which the fundamental theorems and minimum principles of the flow theory are valid. The case of loading according to a broken line law is specially discussed. There

Title : Group composition of cert. in petroleums of north-eastern Caucasus and
about a new type of petroleum

Periodical : Dok. AN SSSR 101/1, 131-133, Mar 1, 1955

Abstract : The purpose of this report is to introduce certain corrections into the existing ideas about the group composition of petroleum not affected by the hypergenesis processes, to characterize briefly a new type of petroleum and to explain the nature of petroleum changes in the catagenesis zone. It is pointed out that a genuine genetic classification of petroleums should take into consideration the different trends in the changes occurring in the catagenesis zones (methanization), and in the hypergenesis zones (enrichment with aromatic compounds and impoverishment in high molecular methane hydrocarbons), as well as the filtration phenomena. Three USSR references (1947-1953). Graphs.

TITLE:

On the Criticism of the Organic Theory of the Origin of Oil
(O kritike organicheskoy teorii proiskhozhdeniya nefti)

PERIODICAL:

Byulleten' Moskovskogo obshchestva ispytateley prirody,
Otdel geologicheskiy, 1958, Nr 5, pp 153 - 154 (USSR)

ABSTRACT:

The author sums up the report he read on 25 March 1958 in the Hydrogeological Section of the Society. He finds that some of the criticism is justified, but that some of it is not. According to him, the correct version of the organic theory is the theory of micro-oil. He puts forward some arguments to confirm this theory. According to him, the concentration of micro-oil forms the natural reservoirs of the oil. This concentration occurs when definite thermodynamical conditions are favorable. In the light of latest data, the formation of primary micro-oil is a normal process. It is the unavoidable result of the formation of sediments in the biosphere. These sediments contain the organic matter, the lipoid components of which concur in the formation of bitumoids. The evolution of bitumoids in the process of lithogenesis leads to the accumulation of petroleum hy-

drocarbons. Genetically the oil is an accumulation (always secondary) of liquid hydrophobic products of the fossilization of organic matter of any given rock. The following geologists are cited by the author: N.A. Kudryavtsev, P.N. Kropotkin, V.B. Porfir'yev, K.K. Volosovich, K.P. Kalitskiy, I.V. Grinberg and A.F. Dobryanskiy.

Title: Congress of Geologists of the Carpathians and Balkans (3rd and 4th)

Editor: Geologer Karabekht I. Balkanakova str.

Publisher: Vestnik Akademii nauk SSSR, 1959, ser. 1, pp. 65 - 89 (USSR)

PERIODICAL: Vestnik Akademii nauk SSSR, 1959, ser. 1, pp. 65 - 89 (USSR)

ABSTRACT: The 4th Congress of the Carpathian-Balkan Association took place in Kirov and Lvov on September 16-29, 1958. 200 delegates taking part. Members of the Association are Bulgaria, Hungary, Poland, Romania, USSR, Czechoslovakia and Yugoslavia. The reports listed topics of the Carpathians and their structural relationships with the Balkanides; the stratigraphy and paleogeography of the Carpathians; tectonics in the Carpathians, and the formation of different mineral resources in them.

O. B. Tyulev, on behalf of the organizing committee of the Soviet Congress, reported on questions of tectonic investigations in the Central West Carpathians by Chochobalov Goldogaria. The Hungarian and Romanian investigators V. Szentes, M. Zilahy, K. Dunairosky, A. Molnár, B. Pátrics, reported on the structure of the South Carpathians. The Bulgarian scientist G. S. Bachvarov outlined the mutual relationship between Carpathians and Balkanides. The Polish researcher J. Gietlinski reported on the hypothesis on the deposit structure of the West Carpathians. L. S. Shchegoleva, J. Miliczyn (Russia), M. K. Lepšová (Czechoslovakia), and the Czechoslovak geologist J. Šílek reported on questions of stratigraphy and paleogeography. The Soviet geologist O. B. Vassiljevich, O. S. Yefimova, suggested that the formation of clastic deposits in the Carpathians is associated with the most mobile zones of the earth's crust.

I. B. Vassiljevich proved the formation of shaly layers in the Soviet Republics of Transcarpathia (Hungary), R. Kardach-Saditsky (Hungary), and Dobrogea (Romania). Reporters V. E. Lazar, D. Dobrogea (Romania) and the Soviet investigators Ye. K. Lazarev, V. V. Tikhonov (Russia) raised questions of volcanicity and conditions of formation of ore deposits. The conference discussed the necessity of carrying on economic investigations in different branches of geology. For a coordination of these investigations, permanent commissions were constituted: for tectonics, stratigraphy, paleogeography and paleontology; education and petroleum; geohydrology and mineralogy; hydrogeology and for volcanic magma.

The 5th Congress of the Association is anticipated for 1961 in Bulgaria.

(Rocks, Sedimentary)

VASSOYEVICH, N.B.

Correlation of the Neogene sediments of the Okha-Ekhaba oil-bearing region and Schmidt Peninsula. Trudy VNIGRI no.181:25-62 '61.
(MIRA 15:2)
(Sakhalin--Geology, Stratigraphic)

VASSOYEVICH, N.B.

Flysh and astrogeology. Geog.sbor. no.15:168-178 '62.
(Flysh) (Earth) (MIRA 15:12)

NERUCHEV, Sergey Germanovich; VASSOYEVICH, N.B., nauchnyy red.;
IONINA, I.N., ved. red.; YASCHURZHINSKAYA, A.B., tekhn.
red.

[Oil-producing layers and oil migration; results of study-
ing organic matter in sedimentary rocks] Nefteproizvodashchie
~~osadchieskie~~ migratsiya nefti; rezul'taty izucheniiia organicheskogo
veshchestva osadochnykh porod. Leningrad, Gostoptekhiz-
dat, 1962. 223 p. (MIRA 15:10)
(Petroleum geology)

VASSOYEVICH, N.

Follow up to V.V. Weber's article "Formation of oil in the productive formation of the southeastern Caucasus." Geol.neft i gaza (MIRA 15:12)
6 no.10:58-61 O '62.
(Azerbaijan—Bitumen—Geology)

VASSOYEVICH, N.B.; BRONOVITSKIY, A.V.

Studying density and porosity of rocks. Trudy VNIGRI no.190:
(MIRA 16:1)
478-484 '62. (Petrology)

VASSOYEVICH, N.B.

More about the terms defying petrogenetic stages and phases.
Trudy VNIGRI no.190:220-243 '62. (MIRA 16:1)
(Petrogenesis)

VASSOYEVICH, N.B.

Origin of petroleum; development of the organic theory from the
time of M.V.Lomonosov until the present. Vest.Mosk.un. Ser.4:Geol.
17 no.3:10-30 My-Je '62. (MIRA 15:6)
(Petroleum geology)

VASSOYEVICH, N.B.; BRONOVITSKIY, A.V.

Letter to the editor of the journal "Prikladnaia geofizika." Prikl.
geofiz. no.32:248-252 '62.
(Rocks, Sedimentary)

"APPROVED FOR RELEASE: 08/31/2001

CIA-RDP86-00513R001859020008-8

VASSOYEVICH, N.B.

In memory of Professor L.B.Rukhin. Uch.zap. LGU no.310:5-13
(MIRA 16:11)
162.

APPROVED FOR RELEASE: 08/31/2001

CIA-RDP86-00513R001859020008-8"

VASSOYEVICH, N.B.

Oil formation in continental (lake) sediments. Geol. nefti i
gaza 7 no.8:1-6 Ag '63. (MIRA 16:10)

1. Vsesoyuznyy neftyanoy nauchno-issledovatel'skiy geologorazvedochnyy institut.

VASSOYEVICH, N.B.; BEZHAYEV, M.M.

Connection between sections of Upper Carboniferous flysch in the
Urals. Dokl. AN SSSR 149 no.6:1393-1396 Ap '63. (MIRA 16:7)

1. Vsesoyuznyy neftyanoy nauchno-issledovatel'skiy geologorazvedochnyy
institut i Ural'skiy filial AN SSSR. Predstavлено akademikom
D.V.Nalivkinym. (Ural Mountains--Flysch)

VASSOYEVICH, N. B.; KOVACHEVA, Y. S.

Carbon-bitumen coefficient as a soil-geochemical factor of oil
and gas potentials. Geol. nefti i gaza 7 no.4:34-40 Ap '63.
(MIRA 16:4)

1. Vsesoyuznyy neftyanoy nauchno-issledovatel'skiy geologorazve-
dochnyy institut, Leningrad.
